**Subject: Phase I Environmental Site Assessment
New England Yard (a.k.a. DPW New England Yard)
210 Messer Street, Laconia, New Hampshire**

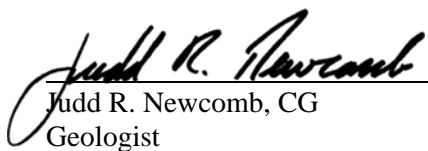

Dear Mr. Koulet:

Enclosed is a copy of the Draft Phase I Environmental Site Assessment (ESA) Report completed for the New England Yard property located at 210 Messer Street in Laconia, New Hampshire. This report was completed in accordance with the American Society of Testing Materials (ASTM) Standard Practice E 1527-05 for Phase I ESAs, which meets the requirements of the U.S. Environmental Protection Agency (EPA) Standards and Practices for All Appropriate Inquiries (AAI); Final Rule (40 CFR Part 312).

Four (4) *recognized environmental conditions*, two (2) *de minimis environmental conditions*, and three (3) *non-scope environmental considerations* were identified for the subject property. These items are described in Section 12 of the attached report.

Please do not hesitate to contact us at (207) 828-1272 if you have any questions or comments.

Sincerely,
CREDERE ASSOCIATES, LLC

EXECUTIVE SUMMARY

Credero Associates, LLC (Credero) performed a Phase I Environmental Site Assessment (ESA) of the property known as the New England Yard (the subject property) that is located at 210 Messer Street in Laconia, New Hampshire. It is important to note that some New Hampshire Department of Environmental Services (NHDES) records refer to the subject property as the “DPW New England Yard”. This Phase I ESA was completed in conformance with the American Society of Testing Materials (ASTM) Standard Practice E 1527-05 for Phase I ESAs, which meets the requirements of the U.S. Environmental Protection Agency (EPA) Standards and Practices for All Appropriate Inquiries (AAI); Final Rule (40 CFR Part 312). Based on Credero’s review of local, state, and federal records and files, property historical records, interviews, and observations during the site reconnaissance on December 7, 2010, the following highlights the findings of this ESA:

The subject property is composed of a 2.40-acre parcel of land located at 210 Messer Street in Laconia, New Hampshire, that is situated on Opechee Bay, which is part of Lake Winnepesaukee. Five (5) buildings are present on the subject property that are known as the Vactor Shed, the Blacksmith Shop, the Horse Barn (which has an attached shed), the Sand/Salt Shed, and the Rodder Shed. Exterior portions of the subject property consist of a paved driveway/parking area, a gravel parking lot, unpaved grassy areas, and a small wooded/brushy area. A paved walking/biking trail, known as the Laconia Winnisquam, Opechee, Winnepesaukee (WOW) Paved Trail, bounds the subject property to the east.

The subject property was historically used by coal and ice companies for storage and shipping, a blacksmith shop, and for storage by the City of Laconia. A railroad spur historically serviced the subject property. The City of Laconia purchased the property from Manchester Coal and Ice Company in 1917 and it has been used for cold storage of equipment, seasonal items (e.g. trash cans, planters, etc.), and sand/salt storage and loading since it’s purchase. The northern portion of the subject property was historically used by the City of Laconia to store cold patch asphalt and reclaimed asphalt. There is no electrical equipment (e.g. transformers) located on the subject property. The Vactor Shed is heated by a forced hot air furnace that is supplied by a 275-gallon fuel oil aboveground storage tank (AST). The remaining subject property buildings are unheated.

This assessment has revealed the following evidence of *recognized environmental conditions* (REC):

- REC-1 – The historical uses of the subject property by coal and ice companies with a railroad spur, a blacksmith shop, and for storage by the City of Laconia Department of Public Works represent a REC because soil or groundwater beneath the subject property may have been affected by the use of heavy oils, metals, and other petroleum and/or hazardous materials associated with these uses.

- REC-2 – Oil stained soil observed within the Blacksmith Shop represents a REC because it is indicative of a release of oil and/or hazardous substances, which may have affected soil and/or groundwater at the subject property.
- REC-3 – The historical presence of an undocumented gasoline underground storage tank (UST) on the east adjoining property represents a REC because undocumented spills or releases associated with this tank may have affected soil or groundwater beneath the subject property. In addition, the presence of nearby leaking UST sites may have affected groundwater beneath the subject property.
- REC-4 – A bulk oil storage tank noted in the vicinity of the Sand/Salt Shed on historical Sanborn Fire Insurance Maps represents a REC because spills or releases associated with this tank may have affected soil or groundwater at the subject property.
- REC-5 – The potential landfilling or burying of wastes reported in the northern portion of the subject property represents a REC because unknown types and quantities of materials placed in this area are unknown and may have impacted soil and groundwater beneath the subject property.
- REC-6 – The floor drain located within the Vactor Shed building represents a REC because evidence of dumping was observed around the drain (i.e. paint covered grate and floor) that may have resulted in releases to the environment.
- REC-7 – The open pail of waste oil and approximately 30-gallon drum of unknown contents observed in the Horse Barn building and 55-gallon drum of unknown contents observed outside the Blacksmith Shop building represent a REC because these items are improperly stored and labeled and represent a material threat of release.

Credero identified evidence of one (1) *de minimis environmental condition* (DMEC) at the subject property which included:

- DMEC-1 –Waste asbestos piping that was observed to be stored in the locked Horse Barn shed.

Credero noted three (3) ASTM *Non-Scope considerations* (NCs) during this Phase I ESA that included:

- NC-1 – The potential for asbestos-containing materials (ACMs) to be present on or within the buildings.
- NC-2 – The potential for lead-based paint to be present on or within the buildings.
- NC-3 – The potential for PCB-containing bulk products (i.e. building materials) to be present on or within the buildings.

To confirm or dismiss the RECs and address the DMECs and NCs described above, Credere makes the following recommendations for the subject property:

- Phase II ESA activities are recommended to confirm or dismiss the identified RECs that may have impacted the subject property.
- The waste oil pail and 30-gallon drum observed in the Horse Barn, and the 55-gallon drum observed outside the Blacksmith Shop should be properly managed and/or disposed in accordance with state and/or federal guidelines.
- The waste asbestos piping stored in the Horse Barn shed should be properly disposed in accordance with NHDES Env-SW-900 guidelines.
- Consistent with the redevelopment plans for the subject property, asbestos, lead-based paint, and PCB building materials surveys should be completed to confirm or dismiss the presence, and/or delineate the extent of hazardous building materials on or within the buildings.

1. INTRODUCTION

Credero Associates, LLC (Credero) performed a Phase I Environmental Site Assessment (ESA) of the New England Yard (the subject property) located at 210 Messer Street in Laconia, New Hampshire. It is important to note that some New Hampshire Department of Environmental Services (NHDES) records refer to the subject property as the “DPW New England Yard”. This report was completed on behalf of the Lakes Region Planning Commission (LRPC) of Meredith, New Hampshire, as part of their Brownfields Assessment Program.

The Phase I ESA was completed in conformance with the American Society of Testing Materials (ASTM) Standard Practice E 1527-05 for Phase I ESAs, which meets the requirements of the U.S. Environmental Protection Agency (EPA) Standards and Practices for All Appropriate Inquiries (AAI); Final Rule (40 CFR Part 312). The report was completed by Mr. Judd R. Newcomb, CG, Mr. Jedd Steinglass, and Mr. Richard S. Vandenberg, PG, of Credero. Resumes of Mr. Newcomb, Mr. Steinglass, and Mr. Vandenberg are included in **Appendix A**

No Phase I ESA can wholly eliminate uncertainty regarding the potential for *recognized environmental conditions* (RECs)¹ in connection with a property. Performance of this practice is intended to reduce, but not eliminate, uncertainty regarding the potential for RECs in connection with the property, and this practice recognizes reasonable limits of time and cost. To the extent possible, this Phase I ESA presents a concise summary that qualitatively identifies potential environmental liability and provides Credero’s professional opinions relative to the identified RECs so that informed business decisions may be made regarding the subject property. If the findings from this Phase I ESA indicate or reasonably imply that environmentally regulated materials are affecting the subject property, then the need for additional testing to evaluate the scope, location, source, and nature of any release or threat of release is included as a recommendation. In contrast, the Phase I ESA may also conclude that the likelihood of environmental problems is not significant and that there is no evidence of RECs in connection with the subject property. The benefit of the completed Phase I ESA is that any new owner would be eligible for the “bona fide prospective purchaser’s” liability protection.

Appendix B contains a detailed description of Credero’s Scope of Work for Phase I ESA’s, which can be divided into the following broad categories: Records Review; Subject Property Reconnaissance; Interviews; and Reporting. However, the following report is subdivided further so that it conforms to the recommended report format provided in ASTM E 1527-05. Photographs of the subject property taken during this assessment are included in **Appendix C**.

¹ A *Recognized Environmental Condition* - the presence or likely presence of any hazardous substances or petroleum products on a property under conditions that indicate an existing release, past release, or material threat of a release of any hazardous substances or petroleum products into structures on the property or into the ground, groundwater, or surface water of the property. The term includes hazardous substances or petroleum products even under conditions in compliance with the law.

2. USER PROVIDED INFORMATION

In accordance with ASTM E 1527-05, the *users* of this report were interviewed concerning their responsibilities under ASTM E 1527-05 Chapter 6. The City of Laconia owns the subject property. As such, Mr. Luke Powell, Assistant Director of the City of Laconia Department of Public Works was interviewed. The following sections summarize the information that the *user* of this report provided to meet their responsibilities under ASTM E 1527-05.

2.1 REASON FOR PERFORMING PHASE I ESA

The City of Laconia is interested in redeveloping the subject property into a waterfront park.

2.2 SPECIALIZED KNOWLEDGE OR EXPERIENCE OF THE USER

Mr. Luke Powell, Assistant Director of the City of Laconia Department of Public Works, reported no specialized knowledge of the subject property for the purpose of identifying RECs.

Mr. Powell does not have experience with real estate transactions involving environmental contamination and is not a commercial broker of real estate or a real estate professional. Mr. Powell reported that he does not have experience acting as a secured creditor on commercial real estate. Mr. Powell does not have professional experience in detecting or remediating environmental contamination.

2.3 COMMONLY KNOWN OR REASONABLY ASCERTAINABLE INFORMATION

Mr. Powell reported that a previous Phase I ESA was completed by Geotechnical Services, Inc. (GSI) for the subject property in 2003 and that another report was prepared in 2010 by GeoInsight, Inc. to document the closure and permanent removal of aboveground storage tanks (AST) that were not in use but were stored on the subject property. These reports are summarized in **Section 4**.

Mr. Powell reported no other information pertinent to the identification of RECs in connection with the subject property.

2.4 TITLE RECORDS

A comprehensive chain-of-title search was not completed as part of this Phase I ESA, nor were title records provided by the *users*. It is Credere's opinion that an adequate history of the subject property was able to be developed from other historic sources.

2.5 ENVIRONMENTAL LIENS OR ACTIVITY USE LIMITATIONS

A third party, such as a state or federal governmental agency, may place environmental liens on a property in order to recover clean-up costs that were incurred by the party. The existence of a

recorded environmental clean-up lien on a property is an indication that environmental conditions either currently exist or previously existed on a property. Activity or land use restrictions for a property may be placed on the property deed to prevent exposure to hazardous or contaminated materials.

Mr. Powell reported that he has no knowledge of any environmental liens that may apply to the subject property under federal, tribal, state, or local law, or any Activity and Land Use Limitations for the subject property such as institutional controls or engineering controls to limit exposure to hazardous substances or petroleum products. See **Sections 6.5** and **6.6** for records review of environmental liens and institutional or engineering controls associated with the subject property.

2.6 REDUCTION OF VALUATION FOR ENVIRONMENTAL ISSUES

Any reduction of the value of the property compared to its purchase price cannot be determined because it is not for sale.

3. SUBJECT PROPERTY DESCRIPTION

3.1 SUBJECT PROPERTY OWNERSHIP AND LOCATION

Parcel Identification:	Map 406, Block 158, Lot 16
Site Owner(s):	City of Laconia
Site Occupants:	City of Laconia
Date of Ownership:	1917 to present
Site Location:	210 Messer Street, Laconia, New Hampshire
Zoning:	Municipal
County:	Belknap
USGS Quadrangle:	Laconia, New Hampshire, 7.5 Minute Quadrangle
Latitude and Longitude:	43.538395 Lat., -71.46704 Long.

3.2 SUBJECT PROPERTY DESCRIPTION AND OPERATIONS

The subject property is currently in use by the City of Laconia Department of Public Works for cold storage of equipment, seasonal items (e.g. trash cans, planters, etc.), and sand/salt storage and loading.

The subject property is composed of a 2.40-acre parcel of land located at 210 Messer Street in Laconia, New Hampshire, with its entire western frontage on Opechee Bay, which is part of Lake Winnepesaukee. A paved walking/biking trail, known as the Laconia Winnisquam, Opechee, Winnepesaukee (WOW) Paved Trail, bounds the subject property to the east, beyond which is a state owned rail line and a fuel company. A residential property adjoins the property to the south and a property owned by the Irving Oil Company adjoins the subject property to the north.

Exterior portions of the subject property consist of a paved driveway/parking area, a gravel lot, unpaved grassy areas, and a small wooded/brushy area that is located in the northwest portion of the subject property. A mulch pile is currently located in the northern portion of the gravel lot. The northern grassy area was reportedly formerly used to store cold patch asphalt and reclaimed asphalt.

The subject property has five (5) buildings that include: the Vactor Shed building (**Picture 1**), the Blacksmith Shop building (**Picture 2**), the Horse Barn building (**Picture 3**), Sand/Salt Shed building (**Picture 4**), and the Rodder Shed building (**Picture 5**).

A description of each building is provided below:

The Vactor Shed was reportedly constructed in 1974 and is currently in use to store a City of Laconia Fire Department boat. The building was reportedly previously used to store the City's vactor truck and the library's book mobile. The building was reportedly also used as a

wood shop for approximately 10 years. A small approximately 6-foot by 8-foot section of the building was previously demolished (see **Figure 2**); however, no documentation of the demolition was available.

The Blacksmith Shop is currently used as an earth moving equipment garage and for the storage of street/construction signs. This building is known to have historically been used as a blacksmith shop. An accurate date of construction was not available for this building, but based on Sanborn Fire Insurance Maps it was built on the property between 1929 and 1948.

The Horse Barn was built or moved to the subject property in the 1940's. The building is currently used for the cold storage of equipment and seasonal items. This building historically housed city-owned draw horses used for pulling city-owned equipment (e.g. snow plows). A shed is attached to northern end of the Horse Barn that was formerly used to store asphaltting equipment.

The Sand/Salt Shed is currently used for sand/salt storage for the Department of Public Works trucks. An accurate date of construction was not available for this building, but based on Sanborn Fire Insurance Maps it was built on the property between 1929 and 1948. .

The Rodder Shed was reportedly constructed in the late 1970s. It is currently in use for the cold storage of seasonal items and recyclable cans and bottles. The Rodder Shed has historically been used by the City of Laconia as a truck and equipment garage.

Figure 1 locates the subject property on the Laconia, New Hampshire, 7.5 minute quadrangle prepared by the United States Geological Survey (USGS). Pertinent features of the subject property are depicted on **Figure 2**.

3.3 SITE UTILITIES

Potable water is provided to the subject property by the City of Laconia Water Department. According to the Department, all properties in the vicinity of the subject property are served by the public water supply.

Wastewater service is available for the subject property by the Winnepesaukee River Basin Program (WRBP) sanitary sewer, a state owned and operated regional wastewater system serving 10 communities in the Lakes Region; however, no wastewater facilities (e.g. bathrooms) are located on the subject property.

Electricity is available to the subject property from Public Service of New Hampshire or the New Hampshire Electric Cooperative.

The Vactor Shed is heated with a No. 2 fuel oil-fired hot air furnace. The remaining buildings are unheated.

3.4 SURFACE WATER

As reported above, the subject property is bound to the west by Opechee Bay. No surface water bodies are located on the subject property.

3.5 TOPOGRAPHY AND DRAINAGE

Based upon a review of the Laconia, New Hampshire, 7.5 minute United States Geological Survey (USGS) Quadrangle map (**Figure 1**), the subject property is located approximately 500-feet above mean sea level (MSL). The portion of the subject property encompassing the buildings and parking area is generally flat. The northern portion of the subject property slightly rises from south to north, and the eastern property boundary has been raised to accommodate railroad tracks. Stormwater on the subject property either infiltrates the ground surface, sheet flows to Opechee Bay, or is directed into stormwater catch basins within the parking lot and immediately west of the sand/salt shed building. A sedimentation tank was recently installed in the southern portion of the subject property that allows sediment in stormwater entering the catch basin to settle before being discharged to Opechee Bay.

3.6 GEOLOGICAL CHARACTERISTICS

3.6.1 Surficial Geology

According to the *Geohydrology, Yield, and Water Quality of Stratified-Drift Aquifers in the Winnepesaukee River Basin, Central New Hampshire*, USGS, Water-Resources Investigations Report 94-4150, by Joseph D. Ayotte (1997), surficial materials at the subject property consist of fine grained stratified drift materials, or fine over coarse grained stratified drift materials. Fine grained stratified drift materials range from clay to fine sand. Fine over coarse grained drift materials range from fine grained sediment to medium sand or coarse gravel. Based on the long history of use of the subject property, it is likely that the surficial materials have been reworked and/or fill materials have been brought to the subject property to establish the current grades.

3.6.2 Bedrock Geology

According to the *Bedrock Geologic Map of New Hampshire* compiled by the USGS and available through the City of Laconia Public Mapping website, the northern portion of the subject property is underlain by the early to late Devonian aged (410 to 365 million years ago) rocks of the Concord Granite. These rocks are known for their fine texture and uniformity. The southern portion of the subject property is underlain by the Lower Silurian aged (372 million years old ago) upper Rangeley Formation. The Rangeley Formation is described as a pelitic schist, metasandstone, and locally coarse-grained metasandstone with rusty weathering. No bedrock outcrops were observed on the subject property during the reconnaissance.

3.6.3 Groundwater Characteristics

Groundwater flow at the subject property likely mimics surface topography and flows west toward Opechee Bay. Area topography also generally slopes west toward Opechee Bay. The depth to groundwater at the subject property is likely shallow due the presence of the lake and likely varies with seasonal fluctuations in precipitation and water level within the lake. It should be noted that local groundwater flow may be highly varied due to precipitation events, stormwater runoff, infiltration/recharge, the presence of subsurface structures and utilities, and varying subsurface hydrogeologic conditions.

According to the *Geohydrology, Yield, and Water Quality of Stratified-Drift Aquifers in the Winnepesaukee River Basin, Central New Hampshire*, the subject property is located over a stratified drift aquifer that is mapped as having an approximate transmissivity less than 1,000 feet squared per day.

4. SUMMARY OF PRIOR ENVIRONMENTAL DOCUMENTS

During interviews and the review of historical documentation, two (2) pertinent previous environmental investigation documents were identified for the subject property. These documents are included in **Appendix D**.

Phase I ESA – October 1, 2003

On October 1, 2003, GSI completed a Phase I ESA for the subject property. GSI performed reconnaissance of the subject property and historical document review to establish the current and historical uses of the subject property and surrounding area, which are discussed throughout the remainder of this Phase I ESA. GSI did not specifically identify any RECs on the subject property, but concluded that stained soil in the Blacksmith Shop, the potential landfilling of wastes, the historic use of the subject property as a coal company, and the storage of coal and fuel on adjacent properties may have led to adverse affects on soil and groundwater beneath the subject property. GSI recommended that a Phase II ESA be performed at the subject property.

AST Closure Summary – February 23, 2010

On February 23, 2010, GeoInsight completed an AST Closure Summary for the subject property which documented the closure of three (3) ASTs. These ASTs included one (1) approximately 9,400-gallon No. 6 fuel oil AST, one (1) approximately 1,500-gallon gasoline or diesel AST, and one (1) 1,000-gallon gasoline or diesel AST that had been stored on the unpaved northern portion of the subject property. According to the City of Laconia, the ASTs were previously in service at unknown locations and were not used on the subject property.

The City of Laconia contracted C.A.B. Service, Inc. (CAB) to clean and remove the tanks. CAB noted that approximately 1,500-gallons of partially hardened No. 6 oil remained in the 9,400-gallon AST though no product was observed in the gasoline or diesel tanks. CAB transported the tanks to their facility in Dover, New Hampshire, to properly clean and dispose of them. CAB noted that several small holes were observed in the bottom of the 9,400-gallon No. 6 fuel oil AST. No holes were observed in the gasoline or diesel tanks. GeoInsight reported that no petroleum staining or odors were observed beneath any of the ASTs.

Following AST removal, GeoInsight collected soil samples for field screening with a photoionization detector (PID). No volatile organic compounds (VOCs) were detected in the field screened samples. One (1) composite soil sample was collected for laboratory analysis, but the sample location was unclear in the report. Laboratory analytical results indicated that several polycyclic aromatic hydrocarbons (PAHs) and total petroleum hydrocarbons (TPH) were detected above the NDHES Soil Remediation Standards (SRS). VOCs were not detected in the sample. Reportedly, the area of the subject property where the ASTs were stored had historically been used to store asphalt for approximately 30 years. GeoInsight attributed the

contaminants detected to the asphalt due to the lack of observed staining beneath the tanks and the fact that no VOCs were detected in the sample.

During the AST removal, CAB also removed eight (8) partially full and/or empty 55-gallon drums of asphalt that had been stored in the Horse Barn shed.

NHDES Response Letter to AST Closure Summary – March 30, 2010

On March 30, 2010, the NHDES issued a letter accepting the AST Closure Summary and stating that the NHDES would not require additional investigation or remediation related to the removal of the three ASTs.

5. SITE RECONNAISSANCE

On December 7, 2010, Credere representatives Mr. Judd Newcomb, CG and Mr. Richard Vandenberg, PG conducted site reconnaissance to determine the physical characteristics of the subject property and the potential presence of RECs. Access to the subject property was provided by Ms. Luke Powell and Mr. Lee Thompson of the City of Laconia Department of Public Works. Pursuant to ASTM E 1527-05 Chapter 12.3, resumes for Mr. Newcomb and Mr. Vandenberg are attached as **Appendix A** to demonstrate their qualifications to perform this work. **Appendix C** contains photographs taken during the site reconnaissance. **Figure 2** is a site plan based on observations made during Credere's reconnaissance and subject property records.

5.1 GENERAL SUBJECT PROPERTY SETTING

5.1.1 Current Use of the Subject Property

The subject property is currently used for the storage of equipment, seasonal items, and sand/salt for the City of Laconia Department of Public Works.

5.1.2 Current Uses of Adjoining Properties

The subject property is located in a mixed residential, commercial, and industrial use area of Ashland. Adjoining properties include the following:

- North:* The subject property is adjoined to the north by an Irving Oil Company property that formerly stored and sold petroleum products (cross-gradient). This property appeared to currently be vacant.
- East:* The subject property is adjoined to the east by Messer Street, across which is Dutile & Sons, Inc., a fuel oil sales and service company (upgradient).
- South:* The subject property is adjoined to the south by residential properties (cross-gradient).
- West:* The subject property is bound to the west by Opechee Bay, which is part of Lake Winnepesaukee (downgradient).

References to upgradient, downgradient, and cross-gradient indicate the perceived location of these features relative to the direction of shallow groundwater flow at the subject property, which has been inferred to flow in a westerly direction.

5.2 EXTERIOR OBSERVATIONS

The exterior of the subject property was observed by walking the perimeter of the subject property; by observing the subject property from Messer Street and the Laconia WOW Paved Trail; by walking the perimeter of the buildings; and by walking the undeveloped portions of the subject property in several transects. Pertinent subject property features are depicted on **Figure 2**.

Exterior portions of the subject property consist of a paved driveway/parking area near the entrance from Messer Street, a gravel lot located around and to the north of the buildings, and unpaved grassy areas near the northern property boundary and along the eastern property boundary. A small wooded/brushy area is located in the northwest portion of the subject property. A paved walking/biking trail, known as the Laconia WOW Pave Trail, bounds the subject property to the east. Railroad tracks parallel the walking trail.

Items stored in exterior portions of the subject property include pipes, tires, guardrails, metal equipment, and wooden items. One (1) unlabeled 55-gallon plastic drum was observed outside and south of the Blacksmith Shop (**Picture 6** and **Figure 2**). No other evidence of petroleum or hazardous materials storage was observed in exterior portions of the subject property. However, one (1) unlabeled 55-gallon steel drum was observed on the south adjoining property, and several large ASTs were observed on the Dutile & Sons, Inc. property, which adjoins the subject property to the east.

Several catch basins were observed in the gravel lot and adjacent to the Vactor Shed. According to Mr. Powell and Mr. Thompson, a stormwater sedimentation tank was recently installed in the parking area and the catch basins were routed to the tank. Previously, the catch basins discharged stormwater directly to Opechee Bay. No visual evidence of spills or dumping was observed around these catch basins.

The Horse Barn appeared to have new wooden siding. The attached shed has asphalt siding. According to Mr. Powell, the Horse Barn recently had wooden siding placed on top of the existing asphalt siding.

The previous Phase I ESA noted that the northern portion of the subject property may have been used for landfilling (**Section 4**). The northern portion of the subject property (**Picture 7**) is higher in elevation than the subject property's gravel lot and the surrounding properties. It appears to have potentially been filled to level the area with the raised railroad bed and Laconia WOW Paved Trail. Although no solid waste was visible, inert materials such as concrete and granite blocks were visible protruding from the banks of this area.

Evidence of the following was not observed on the subject property during the exterior reconnaissance:

- PCB-containing electrical or hydraulic equipment
- Strong, pungent, or noxious odors
- Pools of liquid
- Evidence of drywells, pits, ponds, or lagoons
- Stressed vegetation
- Wells
- Septic systems

5.3 INTERIOR OBSERVATIONS

With the exception of the full sand and salt shed, all interior spaces on the subject property were observed during our site reconnaissance. In general, painted surfaces throughout the subject property buildings vary in type, color, age, and repair. Peeling or chipping paint was observed in some areas of the buildings. Interior areas are lit with incandescent lighting fixtures.

Vactor Shed

The Vactor Shed is a single story concrete block constructed building with a concrete floor. The building contained a City of Laconia Fire Department boat, miscellaneous tools, an open 55-gallon drum that appeared to have been used for mixing paint, and a full 275-gallon No. 2 fuel oil AST (**Picture 8**). The AST supplies a hot air furnace used for heating the garage; however, the furnace is reportedly out-of-service. No evidence of leaks or spills was observed around the AST or furnace. A storm drain style floor drain was observed in the center of the building (**Picture 9**). Dried paint was observed covering the drain's grate and the floor surrounding the drain. According to the prior Phase I ESA, this drain was reportedly plugged and was not in service; however, Mr. Powell and Mr. Thompson were unsure of the state of the drain.

Blacksmith Shop

The Blacksmith Shop is a single story wood construction building that contained a bulldozer, rolling machine, and various other tools and equipment. The floor of the building is concrete, with a significant amount of accumulated soil on top of it. The majority of the floor was stained with grease and oil (**Picture 10**). No evidence of petroleum or hazardous materials storage was observed within the building.

Horse Barn and Attached Shed

The Horse Barn is a two story wood construction building with a concrete ground floor and wooden second floor. In general, the building contained various seasonal items (e.g. planters), some small equipment including a concrete mixer and pavement heater, and miscellaneous tools and parts. Due to the large quantity of items stored in the building, the majority of the concrete first floor was obstructed from view.

Two (2) pallets of calcium chloride were observed on the first floor that are reportedly used for dust control on other City of Laconia properties. One partially full approximately 30-gallon steel drum of an unknown liquid was observed next to the pallets (**Picture 11**). No visual evidence of leaks or spills was observed around the drum. One partially full pail of what appeared to be waste oil and a small gasoline can were observed in the northwest corner of the ground floor (**Picture 12**). No evidence of leaks or spills was observed in this area. Two (2) floor drains were observed in the concrete floor. Both drains appeared blocked with dirt. No evidence of staining or dumping was observed around the drains. No other evidence of petroleum or hazardous materials storage was observed on the first floor.

The second floor contained one (1) partially full 8-gallon container of a herbicide called “Root Out”. The container appeared intact and no evidence of leaks or spills was observed in the vicinity. No other evidence of petroleum or hazardous materials storage was observed on the second floor.

The attached shed was formerly used to store paving equipment. The portion of the shed floor near a hand tool rack appeared heavily stained and is likely asphalt related. The shed currently contains hay used for construction erosion control and several bundles wrapped in poly sheeting. Mr. Powell and Mr. Thompson were asked about the bundles and they reportedly contain waste asbestos pipe that was removed during a City of Laconia project (**Picture 13**). The source of the piping could not be recalled.

Rodder Shed

The Rodder Shed is a single story concrete block building with a concrete floor. The floor appeared to be coated with asphalt or tar-like materials. The building was formerly used for vehicle storage, but is currently used for the storage of seasonal items and recyclable bottles and cans. Small *de minimis* oil stains were observed throughout the floor of the building that are consistent with drips from vehicles. Circular depressions were observed in the floor that appeared to be similar in size to drums. According to Mr. Powell and Mr. Thompson, to their knowledge, no drums of petroleum or hazardous materials have ever been stored in the building. The depressions are reportedly from trash can drums and/or planters. No evidence of petroleum or hazardous materials storage was observed in the building.

Evidence of the following was not observed on the subject property during the interior reconnaissance:

- PCB-containing electrical or hydraulic equipment
- Strong, pungent, or noxious odors
- Pools of liquid

5.4 EVIDENCE OF UNDERGROUND AND ABOVEGROUND STORAGE TANKS

One (1) 275-gallon No. 2 fuel oil AST was observed in the Vactor Shed that supplies a furnace. The AST appeared to be full. No evidence of leaks or spills was observed around the AST.

No other evidence of USTs or ASTs was observed on the subject property during Credere's reconnaissance.

Several ASTs were observed on the east adjoining east property owned by Dutile & Sons, Inc. Dutile & Sons, Inc. is a fuel oil company; therefore, these ASTs likely contain fuel oils. The north adjoining property was formerly operated by the Irving Oil Company. Although no tanks were visible during our site reconnaissance, there is potential for tanks to be present on the property.

5.5 PCB-CONTAINING ELECTRICAL AND HYDRAULIC EQUIPMENT

ASTM Standards for Phase I ESAs specifically exclude fluorescent lighting fixtures that may contain PCBs from electrical equipment unless they are observed in waste form. No fluorescent lighting fixtures were observed in waste form during the site reconnaissance.

No evidence of the use of PCB-containing electrical or hydraulic equipment was identified during the site reconnaissance.

5.6 SITE RECONNAISSANCE LIMITATIONS

The ASTM Standards for Phase I ESAs require the identification of limitations that were encountered that may affect the ability to identify potential environmental conditions on the property, and to provide an opinion as to the significance of the limitation with regard to the ability to identify potential environmental conditions.

The amount of items stored in the Horse Barn obstructed the view of the concrete floor and some areas of the building. This limited Credere's ability to determine the presence of additional floor drains and/or staining and other containers of hazardous materials or petroleum that may have been located within or behind the stored items.

6. SUBJECT PROPERTY AND AREA RECORDS REVIEW

Files at the Laconia City Hall, the NHDES, and the EPA Region 1 were reviewed to obtain information concerning incidents involving releases of petroleum or hazardous materials and to identify potential RECs in connection with the subject property. In addition, an Environmental FirstSearch[®] database search was conducted on December 1, 2010, and is included as **Appendix E**. This research should not be considered inclusive of all regulatory records, but only those records that were publicly available, practically reviewable, and reasonably ascertained.

6.1 HISTORICAL USE RECORDS

ASTM standards for Phase I ESAs require that standard historical records be searched for information on a property dating back to the property's earliest development or 1940, whichever is earliest, based on available documentation. The historical uses of the subject property have been confirmed from standard historical records to have been used by coal and ice companies from at least 1911 to 1917 when the City of Laconia purchased the subject property for use by the Department of Public Works. The subject property is known to have had railroad tracks on or adjacent to the property since prior to 1902. The historical use of the surrounding area was mixed residential, commercial, and/or industrial in each of the records reviewed. Industrial uses in the surrounding area included petroleum and coal storage, and electricity generation.

Specific descriptions of the historical records that were reviewed for the subject property are presented below.

Historical USGS Maps

Historical USGS maps dated 1909, 1956, and 1987 provided by FirstSearch[®] were reviewed relative to the subject property and surrounding area. The maps are located within the FirstSearch[®] report included in **Appendix E**. The land use and any evidence of RECs in these maps are summarized below:

Historical USGS Map (Year)	Land Use	Evidence of RECs and/or Bulk Storage or Release of Petroleum Products or Hazardous Substances
1909	No specific land use was noted on this map. Railroad tracks appear to be located in their current position adjacent to the subject property.	No evidence of RECs was obtained from this map.

1956	No specific land use was noted for the subject property. A nearby property to the south is shown as a large building labeled "Gas"; which is known to be a coal gasification plant.	The coal gasification plant located to the south of the subject property would be considered a REC; however, the coal gasification plant has already been investigated and soil and groundwater at the subject property has not been affected by the historic use of that property (see Section 6.3).
1987	No specific land use was noted on this map. The area is shaded as developed with buildings.	No evidence of RECs was obtained from this map.

Aerial Photographs

Historical aerial photographs of the subject property and surrounding area dated 1974, 1986, 1998, and 2009 were available and reviewed through FirstSearch[®]. Additional historical aerial photographs of the subject property and surrounding area dated 1946, 1953, and 1981 were available and reviewed at the Belknap County Conservation District. Copies of the historic aerial photographs provided by FirstSearch[®] are located within the FirstSearch[®] report included in **Appendix E**. Photographs reviewed at the Belknap County Conservation District were not available for copy at the time they were reviewed but are described below.

Aerial Photograph (Year)	Land Use	Evidence of RECs and/or Bulk Storage or Release of Petroleum Products or Hazardous Substances
1946	The subject property is depicted with the Blacksmith Shop and the Sand/Salt Shed buildings. A V-shaped building is located in the vicinity of the Vactor Shed.	The large industrial facility located to the south of the subject property is known to be a coal gasification plant and the Messer Street Coal Tar Site (see Section 6.3). This site has been investigated and determined not to have impacted the subject property. The east and north adjoining properties appear to be commercial or light industrial with medium size buildings present. A large industrial facility is located several blocks south of the subject property.

1953	The Horse Barn has been added to the subject property.	No additional evidence of RECs was obtained from these photographs.
1974	This photograph depicts the subject property similar to today; however, the Vactor Shed has not yet been constructed.	
1981	The scale of this photograph did not allow for the determination of land use.	
1986	Each of these photographs depicts the subject property in its current use.	
1998		
2009		

Ownership Records

Ownership records were examined at the City of Laconia Tax Assessor’s Office and online at the Belknap County Registry of Deeds. The records indicate that the subject property and adjoining properties have had commercial and industrial uses since at least 1914. Ownership history of the subject property is summarized below:

Owner	Date Acquired
City of Laconia	March 21, 1917
Manchester Coal and Ice Co.	June 30, 1914
New England Investment Co.	Not readily available

City Directories

City directories dated 1932, 1937, 1942, 1947, 1952, 1957, 1962, 1967, 1992, 1995, 2000, 2006, and 2009 were available for the subject property and surrounding area. The subject property is listed as the City Barns and Storage Sheds in the 1957, 1962, and 1967 directories.

“PS Co of NH Plant”, formerly a coal gasification plant, is listed at a lower address in 1942, 1947, 1952, 1957, 1962, and 1967. This property is known as the Messer Street Coal Tar Site discussed in **Section 6.3**. No other apparent properties of concern were listed at lower addresses.

Variations of Dutile & Sons Fuel Oil and Coal are listed at nearby upper addresses in 1992 through 2009 and correspond to the current Dutile & Sons Co. located on the east adjoining property. No other apparent properties of concern were listed at upper addresses.

A table summarizing the City Directories and address listings is included within the FirstSearch[®] report included in **Appendix E**.

Sanborn Fire Insurance Maps

Historical Sanborn Fire Insurance Maps dated 1902, 1911, 1923, 1929, 1948, and 1976 were available and reviewed relative to the subject property and surrounding area. Copies of these maps are located within the FirstSearch[®] report included in **Appendix E**. The land uses and any evidence of RECs in these maps are summarized below:

Map Year	Subject Property Land Use	Adjoining Property Land Use	Evidence of RECs and/or Bulk Storage or Release of Petroleum Products or Hazardous Substances
1902 (abutter)	No map available for subject property.	The north adjoining property is depicted as Standard Oil Company. Several coal sheds and two large oil tanks are depicted. Railroad tracks are depicted passing through the area.	Fuel oil storage on the adjoining north property may have affected soil and/or groundwater beneath the subject property.
1911	The subject property is depicted as Laconia Coal and Ice. Coal pockets (see Figure 2) and railroad tracks are depicted on the property.		Coal storage and railroad usage on the subject property and fuel oil storage on the north and east adjoining properties may have affected soil and/or groundwater beneath the subject property.
1923	The subject property is depicted as the City Storage Sheds. Railroad tracks are present on the subject property.	The adjoining north property is depicted as Standard Oil Company. One coal shed and three large oil tanks are depicted. The east adjoining property has a large coal shed.	
1929		The adjoining north property is depicted with six (6) large oil tanks and a large coal shed. The east adjoining property has two large coal sheds.	

1948	The subject property is depicted as the City Storage Sheds. The railroad tracks have been removed. A large oil tank is depicted in the approximate location of the current Sand/Salt Shed.	The north adjoining property is depicted with six (6) large oil tanks and a large coal shed. The east adjoining property is depicted with a large coal shed, five (5) large oil tanks, and a gasoline UST.	A historic oil tank on the subject property and fuel oil storage on the north adjoining and east properties may have affected soil and/or groundwater beneath the subject property.
1976		The north adjoining property is depicted with six (6) large oil tanks and a large coal shed. The east adjoining property is depicted with a large coal shed, and five (5) large oil tanks.	

6.2 DATA FAILURE

Data failure is defined as a failure to achieve the historical research objectives of ASTM E 1527-05 even after reviewing the standard historical sources that are reasonably ascertainable and likely to be useful dating back to the subject property’s earliest development or 1940, whichever is earliest.

Data failure has occurred during this Phase I ESA because standard historical documents are not available that define the subject property’s earliest development and historic uses in 5-year intervals.

6.3 STATE ENVIRONMENTAL REVIEW

Credere performed an environmental FirstSearch® database search for the subject property and surrounding area. The NHDES also maintains an online ‘OneStop’ Environmental Site Information database, which includes information for USTs, ASTs, solid waste facilities, inactive asbestos disposal sites, hazardous waste generators, uncontrolled hazardous waste sites and remedial programs, brownfields sites, and remediation and initial response spill sites. Credere cross-referenced database information to confirm the accuracy of the FirstSearch® report and used the FirstSearch® report as the basis for more in-depth research in the OneStop database. Credere also contacted Ms. Elizabeth Knowland at the NHDES file room to determine if any paper files were available at the NHDES that were not available through the OneStop database. Ms. Knowland indicated that all NHDES files were available in OneStop. The following sections provide the pertinent results of the FirstSearch® and OneStop database searches, and the paper file reviews for the subject property.

Site Remediation and Initial Response Spill Sites

The NHDES maintains a list of all petroleum and hazardous material remediation and initial response spill sites. The subject property is not listed as an initial response site.

The Messer Street Coal Tar Site (NHDES Site No. 199312038) is located approximately 0.03 miles southeast of the subject property. The site was the former location of a coal gasification plant. The site was extensively investigated and determined to have impacted soil and groundwater in the area; however, data contained in the files indicated the contamination had been fully delineated and was determined not to have impacted the subject property. The site is currently undergoing groundwater monitoring under a NHDES Groundwater Management Permit (GMP).

The Irving Oil Bulk Storage site (NHDES Site No. 199011027), the north adjoining property to the subject property, is listed as an initial response spill site for the release and remediation of an unknown quantity of diesel fuel to the ground surface in March 2000. Fuel was noted in Opechee Bay and product was observed on groundwater at the site. Some soil was removed from the site in 2000; however, a quantity of soil was not listed in the NHDES electronic files. A GMP had previously been issued for this site in 1993 for previously releases. Groundwater monitoring has periodically been conducted at the site since 1993 and the most recent groundwater monitoring data available for review was collected on April 8, 2010. Data within the report indicated that groundwater contaminants at the site are steadily decreasing, and that groundwater flows directly toward Opechee Bay and not toward the subject property; therefore, this site has likely not affected the subject property.

Underground or Aboveground Storage Tanks Listing

According to the NHDES database, no USTs have been registered for the subject property. The subject property is listed as AST Facility No. 0000799 (NHDES Site No. 200911005) for the removal of the three (3) ASTs discussed in **Section 4**; however, reportedly these ASTs were not used on the subject property. The ASTs had been placed on the subject property after removal from an unknown off-site location. No spills or contamination from these ASTs were identified on the subject property.

The east adjoining property located at 242 Messer Street is occupied by Dutile and Sons, Inc., a fuel oil company, and is listed as an AST facility (NHDES Site No. 199502021). No releases are documented for this site. It should be noted that a historical Sanborn Fire Insurance map from 1948 also depicts a gasoline UST on this site. Documentation of the UST was not available in NHDES files; however, this UST was in-place before the NHDES registered tanks.

The Department of Public Works Site leaking UST site (NHDES Site No. 198904018) is the current Department of Public Works office building located approximately 0.03 miles southeast of the subject property at 257 Messer Street. A release was identified at the site in

1988 that affected soil and groundwater in the area. A GMP was issued for the site and groundwater monitoring is ongoing. In 2004, 384 tons of petroleum contaminated soil was removed from a hot spot on the site and a soil vapor extraction (SVE) system was installed. The most recent groundwater monitoring data was collected on November 2, 2010. The results indicated that petroleum contamination is still present in groundwater. However, groundwater flows northwest, cross-gradient and away from the subject property; therefore, this site has likely not affected the subject property.

The Irwin Motors leaking UST site (NHDES Site No. 199102027) is located approximately 0.15 miles southeast of the subject property at 59 Bisson Avenue. This site is listed as closed in the database because remediation at the site was successful. It received a Certificate of No Further Action from the NHDES on August 26, 2010; therefore, this site has likely not affected the subject property.

The Manter Oldsmobile Pontiac leaking UST site (NHDES Site No. 198605641) is located approximately 0.23-miles northeast of the subject property at 27 Bisson Avenue. This site was purchased by the City of Laconia and is currently occupied by the Department of Public Works. Historical releases from USTs at the site impacted soil and groundwater. A groundwater management permit was issued for the site and the City of Laconia is continuing groundwater monitoring and remediation. The most recent groundwater monitoring data was collected on October 5, 2010. The results indicated that petroleum contamination is still present in groundwater. However, groundwater flows southwest and away from the subject property; therefore, this site has likely not affected the subject property.

It should be noted that the FirstSearch[®] report lists several other leaking UST sites within the 0.5-mile minimum search distance of the subject property. Credere reviewed the locations and available information for these sites and determined that they have a low potential to impact environmental conditions at the subject property. This is because the sites are either located across a hydraulic barrier (e.g. Opechee Bay), beyond a leaking UST site discussed above and having groundwater flow vectors that would not impact the subject property, or listed for compliance and/or reporting issues and not for releases of petroleum.

State Brownfields Program

Brownfields sites are defined under the federal Brownfields law, known as the Brownfields Revitalization Act of 2002, as "real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant." The law further defines the term to include a site that is: "contaminated by a controlled substance; contaminated by petroleum or a petroleum product excluded from the definition of 'hazardous substance'; or mine-scarred land."

The NHDES has several Brownfields initiatives including the NH Brownfields Covenant Program, the NH Brownfields Assessment Program, and the NH Brownfields Cleanup Revolving Loan Fund.

Under these three programs, the NHDES maintains lists of active Brownfields sites, closed Brownfields sites, and sites participating in the Brownfields Covenant Program. According to information obtained from the NHDES Brownfields Program website, “active” Brownfields sites are listed in the contaminated sites inventory because they meet the definition of a Brownfields site under the federal Brownfields Revitalization Act of 2002. In addition, some sites included on the active list have entered the program by being assessed through participation in one of the many other EPA-funded Brownfields programs throughout New Hampshire. Sites denoted as “active” are not yet cleaned up to NHDES satisfaction. Closed Brownfields sites are sites listed in the contaminated sites inventory because they have been cleaned up and brought to resolution under the site cleanup program and have participated in one or more NHDES Brownfields initiatives, or generally meet the definition of a Brownfields site. Sites participating in the Brownfields Covenant program are seeking covenants “not-to-sue” from the State of New Hampshire.

This Phase I ESA is currently being completed as part of the LRPC’s Brownfields Program. The subject property is currently listed as NHDES Site No. 200911005 for the ASTs discussed above, but is not currently listed on the NHDES lists as an active Brownfields site. It will likely be listed as a Brownfields Program with the completion of this Phase I ESA.

According to the NHDES lists of Brownfields sites and the FirstSearch[®] report, the Lakes Region Linen site is an active Brownfields site that is located at 41 Opechee Street, approximately 0.24-miles southwest of the subject property. This site is located across Opechee Bay and has potential to impact environmental conditions at the subject property.

Solid Waste Facilities

According to the NHDES OneStop database, the subject property is not listed as a solid waste facility. No solid waste facilities are located within a 0.5-mile minimum search distance of the subject property.

6.4 FEDERAL ENVIRONMENTAL REVIEW

The EPA maintains a number of databases that track properties and facilities that are regulated under the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA), the Resource Conservation and Recovery Act (RCRA), the Emergency Response Notification System (ERNS), and the Federal Institutional Control/Engineering Control (IC/EC) database.

CERCLA Sites

CERCLA is a federally established program that created a fund to identify hazardous waste sites for remediation. The fund is known as Superfund. The Comprehensive Environmental Response, Compensation Information System (CERCLIS) list is a compilation of known and/or suspected uncontrolled or abandoned hazardous waste sites that are eligible for funding under Superfund. The Superfund program includes Federal Facility sites, short- and long-term clean-up sites, National Priority Listing (NPL) sites, delisted NPL sites, Sites Awaiting NPL Decisions (SAND), and No Further Remedial Action Plan (NFRAP) sites. These are defined below.

- Federal Facility sites are hazardous waste sites where the Department of Defense is the lead agency in the investigation or remediation of the site.
- Hazardous waste sites that do not require a long-term cleanup process are considered short-term cleanups, or "removal actions". Although the cleanup process for these sites may not be as lengthy as for long-term cleanups, these sites may still affect the health and environment of those who live near the site.
- Long-term clean-up sites are often caused by years of polluting and may take several years, even decades, to remediate. The most serious uncontrolled or abandoned hazardous waste sites identified as candidates for long-term clean up are listed on the NPL.
- The database of delisted NPL sites lists those sites where no further response is appropriate and the site may be deleted from the NPL.
- SAND sites have had site assessments performed, but a decision regarding NPL proposal has not been recorded. SAND sites include sites that have been assessed by the Superfund program, are now being addressed under state program authorities, or are in various stages of assessment and cleanup by federal or state agencies.
- The No Further Remedial Action Plan (NFRAP) list is a database of archive designated CERCLA sites that, to the best of the EPA's knowledge, assessment has been completed and the EPA has determined that no further steps will be taken to list that site on the NPL.

The subject property is not listed as an NPL, Federal Facility, SAND, CERCLA or NFRAP site.

According to EPA database information, no properties located within a 1.0-mile minimum search distance of the site are currently listed on the NPL. No CERCLA NFRAP sites are located within a 0.5-mile minimum search distance of the subject property.

RCRA Sites

Sites listed in the EPA RCRA database are sites that are hazardous waste treatment, storage, and disposal (RCRA TSD) facilities, or generate small or large quantities of hazardous wastes (RCRA GEN).

Accidents or other activities at RCRA facilities can result in the release of hazardous waste or hazardous constituents to the environment. The RCRA Corrective Action program (CORRACT) requires these facilities to conduct investigations and cleanup actions as necessary. Facilities under the CORRACTs program need to implement necessary corrective action as part of the process to obtain a permit to treat, store, or dispose of hazardous waste.

The subject property is not listed as a RCRA generator facility, RCRA TSD facility, or a CORRACT facility.

No RCRA TSD facilities are located within a 0.5-mile approximate minimum search distance of the subject property. No CORRACT facilities are located within a 1.0-mile approximate minimum search distance of the subject property.

The Irving Oil Bulk Storage site (NHDES Site No. 199011027) is recorded as a delisted small quantity generator (SQG). The site historically disposed of petroleum related compounds. Because this is a delisted SQG, the site does not currently generate hazardous wastes. No RCRA violations were noted in the file.

No other RCRA generators are listed adjacent to the subject property.

ERNS Sites

The Emergency Response Notification System (ERNS) was a database used to store information on notifications of oil discharges and hazardous substances releases. The ERNS program is a cooperative data sharing effort among the EPA Headquarters, the state Department of Transportation (DOT) Research and Special Programs Administration's John A. Volpe National Transportation Systems Center, other DOT program offices, the ten EPA Regions, and the National Response Center (NRC). The ERNS website was redesigned and the data now resides at the NRC. The primary function of the NRC is to serve as the sole national point of contact for reporting all oil, chemical, radiological, and biological discharges into the environment anywhere in the United States and its territories.

The subject property is not listed as an NRC/ERNS site.

Federal IC/EC

The Federal Institutional Control/Engineering Control (Federal IC/EC) is a database of Superfund sites that have either an engineering or institutional control to limit exposure to contamination remaining on a site.

The subject property is not listed as a Federal IC/EC site.

6.5 ENVIRONMENTAL LIENS

A third party, such as a state or federal government agency, may place environmental liens on a property in order to recover clean-up costs that were incurred by that third party. The existence of a recorded environmental clean-up lien on a property is an indication that environmental conditions either currently exist or previously existed on a property. The existence of an environmental clean-up lien could be considered an indicator of potential environmental concerns, and could be a basis for additional environmental investigations on the property to determine the potential existence of ongoing or continued releases of hazardous substances.

The records review and *user* interviews conducted as part of this Phase I ESA identified no environmental liens for the subject property.

6.6 INSTITUTIONAL CONTROLS

Institutional controls or environmental-related covenants for a property are put in place to minimize the potential for human exposure to existing environmental conditions on that property by limiting land or resource use. Types of institutional controls may be referred to as land-use controls, or activity and use limitations, and these controls may be in the form of deed restrictions, zoning restrictions, building or excavation permits, well drilling prohibitions, easements, or covenants. A property owner wishing to maintain liability protections under state or federal law must comply with any existing land use restrictions and maintain any existing institutional control employed at the site in connection with a response action.

The local, state, and federal records reviews and *user* interviews conducted as part of this Phase I ESA identified no institutional controls/engineering controls for the subject property.

7. INTERVIEWS

In accordance with ASTM E 1527-05 Chapters 10 and 11, Mr. Judd R. Newcomb, CG conducted interviews with past and present owners, operators, and occupants of the facility, where available, for the purpose of gathering information regarding the potential for RECs at the subject property. The following presents summary of the findings of these interviews.

7.1 PAST AND PRESENT USER(S), OWNER(S), AND OCCUPANT(S)

7.1.1 Representatives of the User

Ms. Eileen Cabanel, City Manager of the City of Laconia, referred Credere associates to Mr. Luke Powell and Mr. Lee Thompson at the Department of Public Works to obtain access to and information about the subject property (see **Section 7.1.2**). Ms. Cabanel provided Credere with the Phase I ESA discussed in **Section 4.0**.

7.1.2 Owners, Operators, and Occupants/Key Site Manager

Mr. Lee Thompson, Senior Foreman at the City of Laconia Department of Public Works, provided Credere with access the subject property and was interviewed during our reconnaissance regarding his knowledge of the subject property and the presence of RECs in connection with the subject property. Mr. Thompson has been with the Department for over 25 years. Mr. Thompson stated that with the exception of the 275-gallon No. 2 fuel oil AST in the Vactor Building, he has no knowledge of hazardous materials or petroleum storage on the subject property. He noted that the stained soil in the Blacksmith Shop was likely the accumulation of drips and small spills from the machinery stored and maintained in the building and could not recall any large spills in the area. Mr. Thompson stated that he has no knowledge of the landfiling activities noted in the previous Phase I ESA completed in 2003 (**Section 4.0**). Mr. Thompson was unsure of the origin of the pail of waste oil and the 30-gallon drum observed in the Horse Barn. Mr. Thompson noted that the northern grassy area had historically been used for stockpiling asphalt patch and reclaimed asphalt.

Mr. Luke Powell, the City of Laconia Assistant Director of the Department of Public Works, was interviewed during our site reconnaissance regarding his knowledge of the subject property and the presence of RECs in connection with the subject property. Mr. Powell reiterated information provided by Mr. Thompson and added that the Horse Barn was historically used to house City-owned horses used for hauling equipment (e.g. snow plows). Mr. Powell noted that prior to the recent installation of the stormwater sedimentation tank, all of the stormwater and floor drains on the subject property discharged directly to Opechee Bay. Mr. Powell could not recall if the drain within the Vactor Shed had been connected to the sedimentation system. Mr. Powell noted that new wood siding had recently been installed on the Horse Barn directly over existing asphalt siding. Mr. Powell was not aware of any landfiling activities on the subject property. Mr. Powell noted that the former City of Laconia employee who had reported the landfiling during the previous Phase I ESA, Mr. Thomas Joslin, was currently a resident of Meredith, New

Hampshire. Mr. Powell was not aware of any other petroleum or hazardous materials storage on incidents on the subject property.

Credero attempted to contact Mr. Thomas Joslin, a former City of Laconia employee, via telephone on several occasions to inquire about the historical uses of the subject property and the reported landfilling activities. Mr. Joslin could not be reached within the time and cost constraints of this assessment.

7.1.3 Past Owners, Operators, and Occupants/Key Site Manager

The City of Laconia purchased the subject property from Manchester Coal and Ice, Co. in 1917. Credero could not identify an existing company or former representative of that company to contact as part of this assessment.

7.2 STATE AND/OR LOCAL GOVERNMENT OFFICIALS

City of Laconia Offices

Clerks at the City of Laconia offices provided Credero with available records specific to the subject property; however, none of the records provided indicated the presence of RECs in connection with the subject property. None of the clerks were familiar with the history of the subject property.

City of Laconia Fire Department

Credero contacted the City of Laconia Fire Department via telephone. An administrative assistant directed Credero to file a written request for information via email to Deputy Fire Chief Charles Roffo. Credero sent several emails inquiring about the presence of any records for the subject property; however, Mr. Roffo did not return correspondence within the time and cost constraints of this assessment.

Belknap County Conservation District

Credero visited the Belknap County Conservation District office in Laconia on December 7, 2010, to review available aerial photographs for the subject property and surrounding area. Clerks at the office were not familiar with the subject property but provided all of the available photographs for review. Aerial photographs are discussed in **Section 6.1**.

8. ADDITIONS, EXCEPTIONS, AND DEVIATIONS

According to Sections 12.9 and 12.10 of ASTM E 1527-05, all additions and deviations from this practice shall be listed individually in detail. This includes any client-imposed constraints. In this regard, the following additions and deviations to this practice were identified:

Additions

The following ASTM *non-scope considerations* were added (**Section 9**) to Credere's scope of work as a part of this Phase I ESA:

- Radon
- Asbestos
- Lead-based Paint
- PCB-Containing Equipment
- Wetlands

These were included as a part of this Phase I ESA because they are deemed to add value for assessments conducted under the LRPC Brownfields Program.

Exceptions and Deviations

No exceptions or deviations were made during this Phase I ESA.

9. ASTM NON-SCOPE CONSIDERATIONS

The following is a discussion of findings made during this Phase I ESA as it relates to items not included within the scope of ASTM E 1527-05.

9.1 ASBESTOS

Asbestos is a heat-resistant, naturally occurring mineral that breaks into fibers. Asbestos is the generic term for six different types of minerals. Some forms of asbestos are highly toxic by inhalation of dust particles. Past uses of asbestos include pipe and boiler insulation, fire and soundproofing, brakes, gaskets, floor tiles, roofing materials, window caulk, cement products, curtains, and water pipes.

A formal asbestos survey was not included in Credere's scope of services for this Phase I ESA. ACMs are not included within requirements of ASTM E 1527-05 for the Phase I ESA process, unless the ACM is found in its waste form. However, recognizing the ages of the buildings on the subject property, the potential exists for ACM to be present in building materials. In addition, as noted in Section 5.3, polyethylene sheet covered bundles of waste asbestos piping were observed in the Horse Barn shed.

9.2 LEAD-BASED PAINT

Lead is toxic by ingestion and inhalation of dust or fumes. Health effects are generally correlated with blood test levels. Infants and young children absorb ingested lead more readily than older children and young adults. Primary exposure routes include lead paint, lead solder and pipes in drinking water lines, and air quality in inner Town settings. Lead paint testing is typically warranted for residential properties constructed prior to 1978 and properties where children spend a significant amount of time, such as a daycare facility.

A formal lead-based paint survey was not within the scope of services of this Phase I ESA; however, based on the ages of the buildings, lead-based paint may be present on the subject property.

9.3 RADON

Credere has included the general information pertaining to radon for informational purposes only. The EPA has prepared a map to assist National, State, and local organizations to target their resources and to implement radon-resistant building codes. The map divides the country into three Radon Zones. Zone 1 is those areas with the average predicted indoor radon concentration in residential dwellings exceeding the EPA Action limit of 4.0 Pico Curies per Liter (pCi/L), Zone 2 is where average predicted radon levels are between 2.0 and 4.0 pCi/L, and Zone 3 is where average predicted radon levels are less than 2.0 pCi/L.

It is important to note that the EPA has found homes with elevated levels of radon in all three zones, and the EPA recommends site specific testing in order to determine radon levels at a

specific location. However, the map does give a valuable indication of the propensity of radon gas accumulation in structures.

Review of the EPA Map of Radon Zones places the subject property in Zone 2, where average predicted radon levels are between 2.0 and 4.0 pCi/L/. No subgrade spaces are present on the subject property; therefore, radon is not expected to be a concern at this time. Recognizing that the subject property lies in Zone 2, but gets potable water from the public water supply which is tested for radon, the presence of radon in drinking water is not expected to be a concern at this time.

9.4 NON-SCOPE PCB-CONTAINING EQUIPMENT AND MATERIALS

Prior to 1978, fluorescent light ballasts were commonly manufactured with PCBs in the capacitor oil and in a tar-like substance that surrounds ballast components called "potting compound." Ballasts manufactured after 1978 are usually marked "Non-PCB." Fluorescent light fixtures were not noted in the buildings during our reconnaissance; however, if present, based on the reported ages of the buildings the potential exists for PCBs to be present in the any identified fluorescent lighting fixtures.

Caulk, paint, sealants, adhesives, and other materials containing PCBs were used in many buildings during building construction, renovation, or repair from the 1950s through the late 1970s. PCBs were not distributed in commerce after 1978. PCB-containing building materials may represent a risk to human health and the environment and may be regulated for disposal. Based on their ages, the potential exists for PCB-containing building materials to be present in the subject property buildings.

9.5 WETLANDS

Crederre did not observe any wetlands on or adjacent to the subject property during our reconnaissance; however, the subject property is bound to the west by Opechee Bay, which is part of Lake Winnepesaukee. According to the US Fish and Wildlife Service (FWS) National Wetlands Inventory, no wetlands are located on or adjacent to the subject property and the nearest wetland is located approximately 0.7 miles east of the subject property.

10. DATA GAPS

ASTM E 1527-05 Chapter 12.7 requires the identification of data gaps that may affect our ability to identify potential environmental conditions on the subject property, to further identify the sources of information consulted to attempt to fill these data gaps, and the significance of the data gap with regard to the ability to identify potential environmental conditions onsite.

- Data failure occurred during this assessment because standard historical sources were not available documenting the subject property's earliest development or historical uses in five year intervals. Because no other information concerning the history of the subject property was reasonably ascertainable within the time and cost constraints of this assessment, the data failure represents a data gap for the subject property and may have limited our ability to identify RECs in connection with the subject property.
- The amount of items stored in the Horse Barn obstructed the view of the concrete floor. This is considered a data gap because it limited Credere's ability to determine the presence of additional floor drains and/or staining. In addition, other containers of hazardous materials or petroleum may have been located within or behind the stored items.

11. FINDINGS AND OPINIONS

The following is a summary of relevant environmental findings concerning the subject property, and Credere's professional opinion concerning these findings:

- The subject property has historically been used by coal and ice companies for storage and shipping, and was serviced by a railroad spur. The subject property was also used as a blacksmith shop, and for storage by the City of Laconia Department of Public Works. The subject property may have been impacted by petroleum and/or hazardous substances related to these uses.
- Coal and oil have historically been stored on the adjoining north and east properties, and several leaking UST sites are located in the vicinity of the subject property. In addition, a historical Sanborn Fire Insurance map from 1948 indicates that a gasoline UST was present on the east adjoining Dutile & Sons, Inc. property. This UST was not identified in NHDES records. Although available information indicates that the documented releases have a low potential to have affected environmental conditions at the subject property, undocumented releases may have occurred in the vicinity of the subject property that could have affected soil or groundwater quality.
- A historical Sanborn Fire Insurance map from 1948 indicates that a large oil tank was formerly located on the subject property in the vicinity of the existing Sand/Salt Shed. This tank was not documented in NHDES records and may have had historical releases of petroleum that impacted soil or groundwater at the subject property.
- The previous Phase I ESA noted that a prior City of Laconia employee stated that the northern portion of the subject property had historically been used for landfilling or burying of wastes. This account could not be substantiated during the course of this assessment; however, the northern portion of the property is raised compared to the surrounding area and may have been filled with some material. No solid waste was observed during our reconnaissance, but concrete and granite blocks were observed protruding from the area. It is unclear whether this area was filled as part of waste disposal, or as part of some other historical use of the subject property, such as to accommodate the former railroad spur that serviced the historical coal and ice company. If petroleum or hazardous substances were buried in this area, they may have affected soil or groundwater beneath the subject property.
- Oil staining was observed throughout the floor of the blacksmith shop. It is possible that the staining is due to the accumulation of drips and/or small spills from machinery stored and maintained in the shed. The historic use of this building as a blacksmith shop also may have affected the soil on the floor or soil and/or groundwater beneath the building.
- Floor drains were observed within the Vactor Shed building and the Horse Barn Building. All drains at the subject property reportedly historically discharged directly to Opechee Bay but were recently connected to a sedimentation tank. The floor drain observed within the Vactor Shed had paint covering its grate and the surrounding floor, indicating that waste paint may have been dumped into the drain. The outlet of this drain could not be confirmed

during our site reconnaissance. The dumping of materials into the Vactor Shed floor drain may have ultimately either discharged to Opechee Bay or below the Vactor Shed and may have impacted the environmental media beneath the subject property.

- Waste asbestos piping is currently being stored in the Horse Barn's attached shed. Information documenting the source of the piping was not available but it was reportedly generated during a City of Laconia utility project. The shed is routinely locked and is not accessible to the public.
- A pail of waste oil and an approximate 30-gallon drum with unknown contents were observed in the Horse Barn, and a 55-gallon drum of unknown contents was observed outside the Blacksmith Shop. These containers are not stored in a secure manner and the contents should be determine, properly managed, and disposed of.
- Due to the ages of the building, lead-based paint, and ACMs may be present in the buildings.

12. CONCLUSIONS

We have performed this Phase I ESA in conformance with the scope and limitations of the ASTM Practice E 1527-05. Any exceptions to, or deletions from, this process were described in **Section 8**. This assessment has revealed no evidence of RECs in connection with the subject property except for the following:

- REC-1 – The historical uses of the subject property by coal and ice companies with a railroad spur, a blacksmith shop, and for storage by the City of Laconia Department of Public Works, represent a REC because soil or groundwater beneath the subject property may have been affected by the use of heavy oils, metals, and other petroleum and/or hazardous materials associated with these uses.
- REC-2 – Oil stained soil observed within the Blacksmith Shop. This condition represents a REC because it is indicative of a release of oil and/or hazardous substances, which may have affected soil and/or groundwater at the subject property.
- REC-3 – The historical presence of an undocumented gasoline UST on the east adjoining property represents a REC because undocumented spills or releases associated with this tank may have affected soil or groundwater beneath the subject property. In addition, the presence of nearby leaking UST sites may have affected groundwater beneath the subject property.
- REC-4 – A bulk oil storage tank noted in the vicinity of the Sand/Salt Shed on historical Sanborn Fire Insurance Maps represents a REC because spills or releases associated with this tank may have affected soil or groundwater at the subject property.
- REC-5 – The potential landfilling or burying of wastes reported in the northern portion of the subject property represents a REC because the types and quantities of materials placed in this area are unknown and may have impacted soil and groundwater beneath the subject property.
- REC-6 – The floor drain located within the Vactor Shed building represents a REC because its discharge location could not be confirmed and evidence of dumping was observed around the drain (i.e. paint covered grate and floor) that may have resulted in releases to the environment.
- REC-7 – The open pail of waste oil and approximately 30-gallon drum of unknown contents observed in the Horse Barn building and 55-gallon drum of unknown contents observed outside the Blacksmith Shop building represent a REC because these items are improperly stored and labeled and represent a material threat of release.

Credere identified the following *de minimis environmental condition* (DMEC) at the subject property:

- DMEC-1 – The presence of waste asbestos piping stored in the locked Horse Barn shed represents a DMEC because, although this material is not an immediate threat to human

health or the environment, it is improperly stored and labeled and is regulated for proper management and disposal.

The following ASTM *non-Scope considerations* (NCs) were also noted during this Phase I ESA:

- NC-1 – Based on the ages of the subject property buildings, ACMs may be present on or within the buildings.
- NC-2 – Based on the ages of the subject property buildings, lead-based paint may be present on or within the buildings.
- NC-3 – Based on the ages of the subject property buildings, PCB-containing bulk products (i.e. building materials) may be present on or within the buildings.

13. RECOMMENDATIONS

The ASTM Standards require that the environmental professional determine the degree of obviousness of the presence or likely presence of contamination, releases, or other environmental conditions onsite, and the ability to detect that contamination. Based on the findings of this Phase I ESA, obvious conditions that are indicative of potential contamination or past releases are present at the subject property. Considering the findings and conclusions listed above, Credere recommends the following additional activities for the subject property:

- Phase II ESA activities are recommended to confirm or dismiss the identified RECs that may have impacted the subject property.
- The waste oil pail and 30-gallon drum observed in the Horse Barn, and the 55-gallon drum observed outside the Blacksmith Shop should be properly managed and disposed in accordance with state and/or federal guidelines.
- The waste asbestos piping stored in the Horse Barn shed should be properly disposed in accordance with NHDES Env-SW-900 guidelines.
- Consistent with the redevelopment plans for the subject property, asbestos, lead-based paint, and PCB building materials surveys should be completed to confirm or dismiss the presence, and/or delineate the extent of hazardous building materials on or within the buildings.

15. LIMITATIONS

This report has been prepared as part of an agreement between Credere Associates, LLC and LRPC. This agreement was established in order to provide LRPC with information upon which they can rely concerning the existence or likely existence of various environmental contaminants on or adjacent to the subject property.

The report does not provide sufficient information to unequivocally determine that no hazardous waste contamination is present at the subject property. Additional work beyond that completed for this study would be necessary to provide such information. Further, this report is not an audit for regulatory compliance or a detailed condition survey for the presence of asbestos, lead paint, PCBs, radon or any other pollutant specific compound.

Our conclusions regarding the subject property are based on Credere's interpretation of subject property historical land use and on observations of existing subject property conditions during our field reconnaissance visits. The results of this study must be qualified in that no borings, soil or groundwater sampling or chemical testing was conducted as part of this study. Therefore, our conclusions regarding the condition of the subject property do not represent a warranty that the facility, parking areas, adjacent properties, etc., are of the same quality as may be inferred from observable property conditions and readily available property history files.

Credere Associates, LLC performed this Phase I ESA in conformance with the ASTM Standard Practice E 1527-05 and ASTM Standards. No exceptions or significant deviations were made to this practice during the completion of the Phase I ESA.

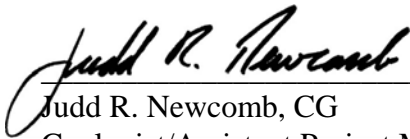

16. SIGNATURES OF ENVIRONMENTAL PROFESSIONALS

The following individuals performed this Phase I ESA in conformance with ASTM Standard Practice E 1527-05 and AAI Standards. Any work completed on this Phase I ESA by an individual who is not considered an *environmental professional* was completed under the supervision or responsible charge of the *environmental professional* listed after the *Environmental Professionals Statement* provided below.

Environmental Professionals Statement

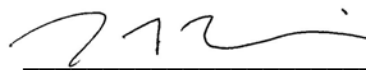

We declare that, to the best of our professional knowledge and belief, we meet the definition of *Environmental Professional* as defined in §312.10 of 40 CFR 312 and we have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. We have developed and performed the all appropriate inquiries in conformance with the standards and practices set for in 40 CFR Part 312.

New Hampshire Geologist Society Member

American Institute of Professional Geologist Member

HIGHLIGHTS OF EXPERIENCE

Mr. Vandenberg is a Senior Hydrogeologist with Crede Associates, LLC with over 18 years experience in assessment, investigation, remediation and disposal of petroleum and hazardous wastes, and water related projects. Mr. Vandenberg has managed numerous compliance, assessment, investigation, and remediation projects including Phase I and Phase II environmental site assessments (ESAs), remedial investigations, remedial action planning, 3-D groundwater flow and contaminant transport modeling, groundwater extraction and treatment system design, soil vapor extraction design, soil removals, and in-situ chemical oxidation projects for clients across New England. In addition, Mr. Vandenberg has developed water supplies for communities and commercial/industrial water users in New Hampshire, Vermont, and Massachusetts.

ENVIRONMENTAL PROJECTS:

Brownfields

Mr. Vandenberg has conducted Phase I and Phase II assessment and investigation activities for the USEPA-funded Brownfields commercial redevelopment and revitalization program and review Quality Assurance Project Plan Addendums detailing all investigation, sampling, and analytical testing activities that were submitted to, and approved by the Maine DEP and USEPA. Additional activities at Brownfields sites included the development of conceptual site models, completion of redevelopment feasibility studies, and the characterization and remediation of contaminated media. Mr. Vandenberg has managed projects for Southern Maine Regional Planning Commission, Nashua Regional Planning Commission, Rockingham Planning Commission (New Hampshire), and City of Westbrook, Maine. Mr. Vandenberg has been involved with the following projects:

Rockingham Regional Planning Commission Brownfields Assessment Program – So. New Hampshire

Project Manager for the Rockingham Planning Commission (RPC) Brownfields Assessment Program. Project included the inventory of over 400 potential Brownfield sites located within the region, prioritization and selection of sites for Environmental Assessment activities, and completion of Phase I and Phase II investigations, remediation planning, reuse planning, and implementation of remedial actions. Tasks have included development of scope of work, senior technical review of reports, project coordination, property owner education, facilitation of stakeholder meetings, regulatory agency interface, site reconnaissance visits, site master planning, and remedial alternative oversight. Properties assessed or currently being assessed as part of program include the following:

- Hampton Landfill, Hampton, New Hampshire
- Former Shoe Factory, Epping, New Hampshire
- Hammond Auto, Freemont, New Hampshire

Nashua Regional Planning Commission Brownfields Assessment Program – So. New Hampshire

Project Manager for the Nashua Regional Planning Commission (NRPC) Petroleum Brownfields Assessment Program. Project included the inventory of over 300 potential Brownfield sites located within the region, prioritization and selection of sites for Environmental Assessment activities, and completion of Phase I and Phase II investigations, remediation planning, reuse planning, and implementation of remedial actions. Tasks have included development of scope of work, senior technical review of reports, project coordination, property owner education,

facilitation of stakeholder meetings, regulatory agency interface, site reconnaissance visits, site master planning, and remedial alternative oversight. Mr. Patten also assisted NRPC in obtaining one additional EPA Brownfields Assessment Grant (\$200k hazardous material) and an EPA Brownfields Cleanup Grant (\$200k for the Nashua Manufacturing Boiler House). Properties assessed or currently being assessed as part of the program include the following:

- Nashua Manufacturing Boiler House, Nashua
- Majestic Motors Junkyard, Merrimack

Southern Maine Regional Planning Commission Brownfields Assessment Program – York County, Maine

Senior Technical Reviewer for the Southern Maine Regional Planning Commission (SMRPC) Brownfields Assessment Program. Project included the inventory of over 200 potential Brownfield sites located within the region, prioritization and selection of sites for Environmental Assessment activities, and completion of Phase I and Phase II investigations, remediation planning, reuse planning, and implementation of remedial actions. Tasks have included development of scope of work, senior technical review of reports, project coordination, property owner education, regulatory agency interface, site reconnaissance visits, site master planning, and remedial alternative oversight. Properties assessed or currently being assessed as part of program includes the following:

- Lincoln Mill, Biddeford, Maine
- North Dam Mill, Biddeford, Maine
- Stenton Trust Mill, Sanford, Maine
- Riverdam Mill, Biddeford, Maine

Westbrook Brownfields Assessment Program – City of Westbrook, Maine

Project Manager for the Westbrook Brownfields Assessment Program. Project included the inventory of over 50 potential Brownfield sites located within the city, prioritization and selection of sites for Environmental Assessment activities, and completion of Phase I and Phase II investigations, remediation planning, reuse planning, and implementation of remedial actions. Properties assessed or currently being assessed as part of program includes the following:

- Larson's Junkyard site

Miscellaneous Brownfields Environmental Assessments and Remedial Investigations

Mr. Vandenberg has performed all phases of environmental site assessments and remedial investigations for the projects mentioned below. Tasks completed include development of scope of work, senior technical review of reports, project coordination, records review for federal, state, and local authorities, site reconnaissance visits, soil and groundwater sampling, and summary report preparation. Representative projects include:

- Global Timber, Hartland, Vermont
- Barre Coal Tar, Montpelier, Vermont

Credere Associates LLC

Jedd Steinglass Senior Project Manager

TRAINING

- 40-hour OSHA 29 CFR 1910.120 HAZWOPER Course
- 8-hour OSHA 29 CFR 1910.120 HAZWOPER Refresher (Nov. 2009)
- Utility Solid Waste Advisory Group Advanced PCB Training, 2008

EDUCATION

- B.A. Geology, 1999
Colgate University

HIGHLIGHTS OF EXPERIENCE

In a professional career spanning eleven years, Jedd has focused his efforts on the environment, completing environmental investigation, compliance, and remediation projects throughout New England.

PROJECT EXPERIENCE INCLUDES:

Environmental Site Assessment and Remediation

As an environmental consultant, Jedd has served as a lead member of an Emergency Response and Remediation Operations Team. He has opened and directed a branch office and served as a senior project manager for an average portfolio of 30 active projects and a staff of 20. He has performed facility assessments, subsurface investigations, and conducted technical report review. Jedd directed the management of remediation projects to ensure compliance at the local, state, and federal level, including an outstanding variety of initial and comprehensive response actions, risk characterization, regulatory closure, and usage restrictions. He provided oversight for the removal and/or replacement of underground storage tanks including agency notification, corrective actions, soil remediation, and closure activities. Additionally, Jedd has managed long-term groundwater monitoring projects and conducted the hydrogeologic investigations and modeling necessary for major and minor groundwater discharge permitting. He has also performed remote sensing studies incorporating the use of sub-surface acoustical profiling, GPS, and GIS technologies.

Facility Assessment and Closure

Jedd's range of abilities also includes the design and management of numerous pre-construction and pre-demolition characterization and remediation efforts, which addressed soil, concrete, and regulated building materials, health and safety plan development, waste materials management, and disposal coordination. Jedd's responsibilities have also included developing proposals, job scopes, and project plans, directing bid processes, and contract management.

Utility Consulting

Jedd completed many projects associated with electrical distribution, transmission, substation, and service centers. As a primary project manager for a multi-national electric and natural gas utility, Jedd also managed the proper installation of underground utilities through contaminated areas and directed the remediation of mercury releases, which often involved the containment and elimination of acute health hazards.

PCB Characterization and Remediation

Jedd has directed the characterization and cleanup of PCB remediation waste in accordance with EPA protocol and approval at more than 30 challenging cleanup sites. Cleanups were conducted under self-implementing, performance-based, risk-based, and alternative disposal methods. Completed projects involved the decontamination, off-site disposal, and/or on-site disposal of impacted equipment and structures, bulk materials such as concrete, wood, soil, and sediment, surface water, bulk products including paint and caulking, and electrical components such as transformers and regulators.

Representative Brownfields Projects Include:

- Brighton Memorial School, Brighton ME
- Aerofab Mill, Sanford, ME
- Adams School, Portland, ME
- Nashua Boiler House, Nashua, NH
- Lakes Region Facility, Laconia, NH
- Industrial Drive, Hudson, NH

HIGHLIGHTS OF EXPERIENCE

Mr. Newcomb is a Geologist and Assistant Project Manager for Crede Associates with experience in Brownfields, Phase I and Phase II Environmental Site Assessments, remedial system installation, operation, maintenance and reporting, remedial additive injection, UST closure, various drilling methods, and environmental sampling. Mr. Newcomb also has three years experience working with the Massachusetts Contingency Plan, 310 CMR 40.0000.

PROJECT EXPERIENCE INCLUDES:

Environmental Site Assessment/Sampling/Subsurface Investigation

Mr. Newcomb has performed environmental site assessments for numerous sites throughout New England varying from undeveloped land to industrial properties. After performing historical research, initial site investigations, assessing UST, AST, and hazardous materials compliance, interfacing with site personnel, federal, state, and local regulatory agencies as part of the regulatory records review, Mr. Newcomb prepared summary reports with recommended work plans for Phase II investigation. Phase II investigations concerned the release of chlorinated organic compounds, petroleum products, pollutant metals, PCBs, and pesticides to soil, groundwater, air, and concrete. As part of these investigations Mr. Newcomb performed test pitting, mud logging and environmental sampling utilizing a variety of drilling methods including: hollow stem auger, air rotary, mobile tripod, direct push Geoprobe®, and hand held tools. Associated activities included soil and discrete groundwater sample collection, bedrock coring and rock quality determination, monitoring well installation, and rising/falling head tests. Responsibilities included preparation of sampling plans, equipment management, health and safety coordination, accurate description of overburden and bedrock strata, installation of specified well construction, collecting representative samples, preparation of boring logs, data evaluation, interfacing with affected public and regulatory agencies, and project completion reports.

Brownfields

Mr. Newcomb has conducted extensive historical research, Phase I and Phase II environmental site assessment and investigation activities for the USEPA-funded Brownfields commercial redevelopment and revitalization program and prepared Quality Assurance Project Plans detailing all investigation, sampling, and analytical testing activities that were submitted to, and approved by the USEPA. Additional activities at Brownfields sites included the development of conceptual site models, completion of redevelopment feasibility studies, and the characterization and remediation of contaminated media. Mr. Newcomb has worked with the cities of Lewiston, Bath, Westbrook and Brewer, Maine, as well as with the Southern Maine Regional Planning Commission, and the City of Nashua, New Hampshire to develop Brownfields programs. A representative Brownfields project is summarized below:

Eastern Fine Paper, Brewer, Maine

Investigations conducted at the Eastern Fine Paper site included a geophysical electromagnetic survey, test pitting, a combination of direct-push, conventional auger, and drive-and-wash soil borings, installation of groundwater monitoring wells, pore water sampling, and the collection and field screening of soil, sediment, surface water, and groundwater samples. Field screening methods included PID headspace analysis, XRF soil and lead paint analyses, water chemistry field test kits, and direct-read instruments. Contaminants detected at the site primarily included PCBs, petroleum, SVOCs, and metals above Maine DEP Remedial Action Guidelines and EPA TSCA Guidelines. Asbestos-containing building materials and lead-based paint were also identified within the mill building. During redevelopment all asbestos-containing materials were removed and the building was demolished. Soils throughout the site were excavated and transported off-site for disposal, or were relocated and encapsulated on-site. Long-term stream quality and cap

maintenance plans have been developed for the site to ensure the protection of human health and the environment. The completed redevelopment of the site has brought approximately 500 new jobs to the City of Brewer.

Southern Maine Regional Planning Commission

Mr. Newcomb has assisted in the management of projects for the Southern Maine Regional Planning Commission (SMRPC) Brownfields Program. Past and ongoing responsibilities include communications with SMRPC, the Maine DEP, the U.S. EPA, property owners, and developers, project identification, contracting and contractor coordination, project research, scope of work, and report preparation, field work and technical oversight, and EPA reporting. SMRPC projects include:

- North Dam Mill, Biddeford, ME
- Riverdam Mill, Biddeford, ME
- Lincoln Mill, Biddeford, ME
- Robinson Mill, Parsonsfield, ME
- N. Berwick Woolen Mill, Berwick, ME
- Stenton Trust Mill, Sanford, Maine
- Biddeford Box Co., Biddeford, ME
- Dubois Property, Biddeford, ME
- Gagne Property, Biddeford, ME
- Kittery Town Pier, Kittery, ME
- Highland Towing, York, ME
- Municipal Lots, Kennebunk, ME

Other representative Brownfields projects include:

- Libbey Mill, Lewiston, ME
- Cowan Mill, Lewiston, ME
- Androscoggin Mill #8, Lewiston, ME
- Saccarappa Park, Westbrook, ME
- Texas Steamship Property, Bath, ME
- The Old Shipyard, Bath, ME
- The Praver Block, Bath, ME
- Town Landing, Bath, ME
- Robbin’s Junkyard, West Bath, ME
- Nashua Boiler House, Nashua, NH
- Majestic Motors, Merrimack, NH
- Sanford Mill, Sanford, ME
- Fmr Milford Police Dept., Milford, NH
- Grugnale Property, Milford, NH
- Granite Landing, Manchester, NH
- Greater ME Auto Auction, Gray, ME
- Gray Municipal Offices, Gray, ME
- Hammond Auto, Fremont, NH

Remedial Systems/Technologies

Mr. Newcomb has assisted in the installation and operation of several types of remedial systems for the extraction of contaminated media including air sparge, pump and treat, dual phase extraction, and bio-pile venting, and the application of several other remedial technologies including Fenton’s Reagent, oxygen releasing compound, and hydrogen releasing compound. Responsibilities included pre-installation/application pilot testing, health and safety coordination the operation, maintenance, and sampling of installed systems, and the preparation of associated operational, sampling, and closure reports. Representative remedial systems projects include:

- New Franklin Laundry Soil Vapor Extraction (SVE) System Design, Bangor, ME
- Smith Street Groundwater Treatment System, Waltham, MA
- Former Rumford National Graphics Product Recovery and Treatment System, Belfast, ME
- Monhegan Island Product Recovery and Treatment System, Monhegan Island, ME

UST Closure

Mr. Newcomb has overseen numerous UST excavations and removals, inspections of the removed USTs, abandonment-in-place of USTs, and confirmatory soil and groundwater sampling to assess environmental impacts associated with USTs and in accordance with MEDEP Regulations, Chapter 691, and New Hampshire Code of Administrative Rules Env-Wm 1401. Responsibilities included accurate documentation of the closures and waste transportation, representative sampling, and preparation of UST closure reports for submittal to applicable regulatory agencies. Representative UST closures include:

- Former MBNA Belfast Campus diesel UST, Belfast, ME
- LaChance Brothers Filling Station gasoline USTs, Sanford, ME
- Chebeague Island Boat Yard UST piping removal, Chebeague Island, ME
- Maine Turnpike Mile 58 Service Center UST piping removal, Gray, ME
- Kittery Town Pier fuel dock UST, Kittery, ME
- Granite Landing unknown USTs, Manchester, NH
- Army Corps. of Engineers – Formerly Used Defense Sites:
 - Musquatch Mountain, Topsfield, ME
 - Radar Site, Sedgewick, ME
 - Former Barracks, Quoddy, ME
 - Generator Bldng, Little Chebeague Island, ME
 - Fire Training Bldng, Little Chebeague Island, ME
 - Generator Bldng, Cow Island, ME

APPENDIX B
CREDERE'S PHASE I SCOPE OF WORK

Credere's LRPC Brownfields Scope of Work

The following is Credere's scope of work for completion of this Phase I Environmental Site Assessment (ESA) conducted in accordance with the ASTM Standard Practice for Environmental Site Assessments: Phase I Process (ASTM 1527-05). The ASTM Standard Practice for Environmental Site Assessments: Phase I Process (ASTM 1527-05) meets the requirements of the Environmental Protection Agency (EPA) Standards and Practices for All Appropriate Inquiries (AAI); Final Rule (40 CFR Part 312).

The objective of conducting a Phase I ESA is to provide a concise liability assessment in order that informed environmental business decisions may be made regarding the subject property. To accomplish this goal, our reports contain a summary that focuses on potential liabilities and presents conclusions and recommendations for confirming or dismissing the concerns and Recognized Environmental Conditions (RECs) identified during the Phase I ESA.

Our Phase I ESA process consists of the following four tasks: (1) records review, (2) site reconnaissance, (3) interviews, and (4) report. Each of these tasks is described in detail below.

Records Review

The purpose of the records review was to obtain and review reasonably ascertainable¹ records that help identify recognized environmental conditions in connection with the property. The following state and federal environmental record sources, with the minimum search distances used for each, are reviewed from USEPA websites, the Maine Department of Environmental Protection (MDEP) online databases, and an environmental records report for the property from FirstSearch Technology Corp:

Source	Minimum Search Distance (mi)
Federal NPL Site List	1.0
Federal CERCLIS List	0.5
Federal RCRA TSD Facilities List	1.0
Federal RCRA Generators List	Property and Adjoining Properties
Federal ERNS List	Property Only
State Leaking UST Sites	0.5
State Registered UST Sites	Property and Adjoining Properties

These records are reviewed for database listings associated with activities identified on the target property, or nearby sites that may have the potential to impact the target

¹ Information that is 1) publicly available, 2) obtainable from its source within reasonable time and cost constraints, and 3) practically reviewable (ASTM E 1527-05).

property. Additional state and local records sources are reviewed to enhance or supplement the federal and state sources identified above. These include:

- Lists of Landfill/Solid Waste Disposal Sites
- Records of Emergency Release Reports
- USGS 7.5 Minute Topographic Map
- Department of Natural Resources Publications
- State Geologic Surveys and Reports
- Fire Department
- County Health Department

Historical records for the subject property and surrounding area are reviewed to determine the previous uses or occupancies of the property and surrounding area to identify those uses or occupancies that are likely to have led to recognized environmental conditions in connection with the property. The following historical records are reviewed:

- Ownership/Lease-Right History
- Aerial Photographs
- Historical USGS Topographic Maps
- Historical City Directories
- Historical Fire Insurance Maps
- Historical Property Tax Assessor, Code Enforcement, and Zoning/Land Use Records
- Previous Environmental Investigations

Historical information contained in any previous environmental site assessments is reviewed, incorporated, and referenced as appropriate.

Site Reconnaissance

The site reconnaissance is performed to obtain information indicating the likelihood of identifying recognized environmental conditions in connection with the target property. The site reconnaissance includes visual and physical observations noted while observing the periphery of the property, the periphery of all structures on the property, all interior spaces of the structure, including maintenance and repair areas, common areas, storage areas, and boiler rooms. Credere notes the presence or absence of the following:

- Storage tanks
- Odors
- Pools of liquid
- Drums
- Identified and/or unidentified substance containers
- Likely PCB-containing transformers or window caulk
- Heating/cooling sources

- Interior stains or corrosion
- Drains and sumps
- Pits, ponds, lagoons
- Stained soil or pavement
- Stressed vegetation
- Solid waste
- Wastewater
- Wells
- Septic systems

Any visual or physical indications of past uses of the property that are likely to involve the use, treatment, storage, disposal, or generation of hazardous substances or petroleum products are noted. Current and/or past uses of adjoining properties and/or the surrounding area to the extent visually or physically observed which are likely to indicate RECs in connection with the adjoining property or property are also noted.

Interviews

Interviews with current and former owners and occupants are conducted to obtain information indicating RECs in connection with the property. The content of questions to be asked shall attempt to obtain information about uses and conditions of items noted during the site reconnaissance and to obtain any environmentally pertinent documents or any threatened, pending, or past: litigation, administrative actions, or notices of violation relevant to hazardous substances or petroleum products in, on, or from the property. Reasonable attempts will be made to interview the property owner, occupant, and/or key site manager.

Interviews with local government officials are conducted to obtain information indicating RECs in connection with the subject property. Reasonable attempts are made to interview a staff member of the following types of local government agencies: fire department, tax assessor, code enforcement officer, health agencies, and/or local/regional office of state agency having jurisdiction over hazardous waste disposal or other environmental matters in the area in which the property is located.

Report

Our report for the Phase I ESA will generally follow the recommended report format presented in ASTM E 1527-05. The report will include documentation to support the analysis, opinions, and conclusions presented in the report, as well as the credentials of the environmental professional(s) responsible for the Phase I ESA. The report will include the environmental professional's opinion of the impact of recognized environmental conditions in connection with the property. If the assessment reveals no evidence of RECs, then a statement to this effect will be made in the report.

Non-ASTM-Scope Considerations

The following non-ASTM-scope considerations are added to the Credere's scope of work as a part of this Phase I:

- Radon
- Asbestos
- Lead Based Paint
- Polychlorinated Biphenyls (PCBs) Containing Equipment
- Wetlands

These are included as a part of this Phase I ESA because they are deemed to add value for assessments conducted under the LRPC Brownfields Program.

APPENDIX D
PRIOR DOCUMENTS

The State of New Hampshire
DEPARTMENT OF ENVIRONMENTAL SERVICES

Thomas S. Burack, Commissioner

March 30, 2010

Luke Powell
City of Laconia
45 Beacon Street East
Laconia, NH 03246

SUBJECT: LACONIA – New England Yard, 210 Messer Street: *Aboveground Storage Tank Closure Report*, dated February 23, 2010 by Geolnsight, (DES Site #200911005; AST# 0000799)

Dear Mr. Powell:

The New Hampshire Department of Environmental Services (DES) has reviewed the report for the three tanks removed on January 12, 2010 at the above referenced facility. Based upon the information contained in the report, DES has concluded that:

1. It does not appear that a discharge of petroleum that would ultimately impact surface water or groundwater of the State has occurred **related to these tanks**. Therefore, DES will not require additional investigation or remedial measure **related to this tank removal**.
2. The owner(s) of this facility must meet the goals of the N.H. Administrative Rules Env-Or 600, *Contaminated Site Management*. That is, groundwater at the site must continue to meet drinking water quality standards. The owner shall not undertake any activities that might result in Ambient Groundwater Quality Standards being exceeded at the site.

DES reserves the right (under N.H. Administrative Rules Env-Or 600, *Contaminated Site Management*) to require hydro-geological investigations and/or remedial measures, if further information indicating the need for such work becomes known.

If you have any questions, please contact me at the Waste Management Division.

Sincerely,

Charles Berube, P.G.
Oil Remediation & Compliance Bureau

RE: Aboveground Storage Tank Closure Summary
City of Laconia – New England Yard
210 Messer Street
Laconia, New Hampshire
NHDES Site #200911005
NHDES AST Site #0000799

Dear Mr. Juranty:

GeoInsight, Inc. (GeoInsight) was retained by the City of Laconia (the City) to oversee the removal of three aboveground storage tanks (ASTs) at the above-referenced property (the Site) and to prepare this AST Closure Summary Report. The City contracted C.A.B. Services, Inc. (CAB) to perform the AST removal activities conducted on January 12, 2010. The AST closure assessment conducted by GeoInsight was performed in accordance with New Hampshire Code of Administrative Rules, Part Env-Wm 1402 Control of Aboveground Petroleum Storage Facilities (Env-Wm 1402.15), revised January 2009. A completed NHDES *Registration of Aboveground Petroleum Storage Tank Systems* form is presented as Attachment A.

SITE AND ABOVEGROUND STORAGE TANK INFORMATION

The Site is located at 210 Messer Street in Laconia, New Hampshire in a mixed commercial/residential area. One approximately 9,400-gallon No. 6 fuel oil AST, one approximately 1,500-gallon gasoline or diesel AST, and one approximately 1,000-gallon gasoline or diesel AST were temporarily stored directly on an unpaved area located on the northern portion of the Site. According to Site representatives, the ASTs were previously in operation at other unknown locations. Pumps, dispensers, and vent lines associated with the three ASTs were not observed at the time of removal and appeared to be out-of-service. Additionally, eight 55-gallon steel drums of unused asphalt sealant were stored in an old horse barn located on eastern portion of the Site.

ABOVEGROUND STORAGE TANK OBSERVATIONS AND REMOVAL

Removal of the three ASTs was completed by CAB on January 12, 2010. The 9,400-gallon AST was noted to contain approximately 3 feet of No. 6 fuel oil (approximately 1,500 gallons). The exterior of the AST was in satisfactory condition with some dents, corrosion, and minor pitting. The 9,400-gallon AST was transported off-Site to the CAB facility in Dover, New Hampshire to be subsequently heated, pumped, and cleaned. The residual No. 6 fuel oil removed from the AST by CAB (1,576 gallons) was transported to United Oil Recovery, Inc. in Newington, New Hampshire for recycling on January 29, 2010. Following the cleaning of the 9,400-gallon AST, CAB reported that several small holes were visible on the bottom portion of the AST. Petroleum staining and odors were not observed in the soil located beneath, and adjacent to, the 9,400-gallon AST.

Residual petroleum products were not observed in the 1,500-gallon or 1,000-gallon ASTs. The 1,500-gallon AST was noted to be in satisfactory condition with some corrosion. The 1,000-gallon AST was noted to be in poor condition, with multiple areas of pitting and corrosion and small visible holes. The 1,500-gallon and 1,000-gallon ASTs were transported off-Site to the CAB facility in Dover, New Hampshire to await proper cleaning and disposal. Petroleum staining and odors were not observed in the soil located beneath and adjacent to the 1,500-gallon or 1,000-gallon ASTs. Site photographs of the tank removal activities are included in Attachment B.

On January 12, 2010, CAB removed the eight partially-filled and empty 55-gallon drums containing asphalt sealant from the Site. The drums were transported off-Site for proper disposal. Copies of the non-hazardous waste manifest and bill of lading are included in Attachment C.

SAMPLING AND FIELD SCREENING

Soil samples collected from beneath the ASTs were screened in the field for total volatile organic compounds (VOCs) using a photoionization detector (PID). The PID was calibrated before use according to the manufacturer's specifications (i.e., using a 100 parts per million [ppm] isobutylene and air mixture and adjusting the instrument with a reference factor to provide readings in ppm as benzene). Discrete soil samples were collected from 0 to 0.5 feet below ground surface and field screened. PID readings were less than 1 ppm in the soil samples screened from beneath each AST. One composite soil sample from discrete soil sample locations was created and placed into laboratory-supplied sample containers. The soil sample, designated AST 1-12-10, was submitted to Spectrum Analytical, Inc. of Agawam, Massachusetts for analyses of VOCs by United States Environmental Protection Agency (USEPA) Method 8260B, polycyclic aromatic hydrocarbons (PAHs) by USEPA 8270, and total petroleum hydrocarbons (TPH) as diesel-range organics (DRO) by USEPA Method 8015-DRO.

LABORATORY RESULTS

Soil sample AST 1-12-10 contained concentrations of benzo (a) anthracene (7.72 milligrams per kilogram [mg/kg]), benzo (b) fluoranthene (5.85 mg/kg), benzo (a) pyrene (5.9 mg/kg), and indeno (1,2,3-cd) pyrene (3.14 mg/kg) above the applicable NHDES Soil Remediation Standards (SRS). Additional PAHs and TPH as DRO (1,390 mg/kg) were detected at concentrations above the laboratory method detection limits (MDLs), but below the applicable NHDES SRSs. VOC constituents were not detected above laboratory MDLs. Laboratory analytical results are included as Attachment D and summarized in Table 1.

According to information provided by Site representatives, historical operations at the Site included the storage of cold asphalt patch for road maintenance. The cold patch was reportedly stored on-Site for approximately 30 years in the immediate vicinity of the area where the ASTs were temporarily stored. As visual and olfactory evidence of a petroleum release was not present during Site assessment activities and VOCs were not detected in the sample submitted for laboratory analysis, residual cold patch in the soil may be a likely source of the PAHs detected above the SRSs in sample AST 1-12-10.

LIMITATIONS AND EXCEPTIONS

GeoInsight performed the activities described herein in a manner generally consistent with the level of care and skill ordinarily exercised by other environmental consultants engaged for similar services under similar circumstances.

Accordingly, the findings and conclusions of this report do not constitute scientific certainties, but rather probabilities based upon our professional judgment concerning data gathered during the course of the assessment and the use of engineering and scientific principles. GeoInsight cannot represent that the Site does not contain hazardous materials or other latent environmental conditions beyond those detected or observed by GeoInsight during this assessment. Should additional information regarding the Site become available in the future that are inconsistent with the findings presented herein, the findings of this report should be re-evaluated by GeoInsight or another qualified environmental professional in light of the additional information. To the extent that the interpretations and findings presented in this report are based in whole, or in part, on information and representations in reports prepared by others, they are contingent upon the validity of the information.

If you have questions regarding this AST Closure Summary Report, please feel free to call us in our Manchester, New Hampshire office at (603) 314-0820.

Sincerely,
GEOINSIGHT, INC.

 FAX (603) 271-2181

INSTRUCTIONS	STATE USE ONLY
<p>This form must be completed for the initial registration of each regulated AST system, and each time there is a change in status or a substantial design change is made to an existing AST system. Please type or print all entries in ink. This form must be signed by the owner or authorized representative to be valid. If more space is needed for additional ASTs, photocopies of the following pages may be made and submitted with this form.</p> <p>The New Hampshire Code of Administrative Rules Env-Wm 1402, Control of Aboveground Petroleum Storage Facilities (AST Rules), which became effective on April 25, 1997, require that an owner of a regulated AST facility register all ASTs with DES. A regulated AST facility is one that has a single petroleum AST with a capacity of more than 660-gallons, or two or more petroleum ASTs having a combined storage capacity of more than 1,320-gallons. If a facility stores less than 1,320-gallons of virgin heating oil used only for on-premise use heating of structures, then that virgin heating oil storage is not included in calculating the combined regulated storage capacity.</p>	<p>FACILITY # _____</p> <p>DATE RECEIVED: _____</p> <p>Date entered: _____</p> <p>Data Entry Clerk Initials: _____</p> <p>Owner contacted to clarify: _____</p> <p>Responses, comment: _____</p>

VII. DESCRIPTION OF ABOVEGROUND STORAGE TANKS

Tank Identification Number	Tank No.	Tank No.	Tank No.	Tank No.	Tank No.					
1. Status of Tank (mark only one)										
New Tank	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>					
Currently in Use	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>					
Out of Service	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>					
Substantial Design Change	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>					
2. Date of Installation/Age of Tanks										
3. Tank Capacity (gallons)										
4. Tank Design (mark all that apply)										
UL 80 Steel Indoors Tank	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>					
UL 142 Single Wall Steel Tank	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>					
UL 142 Double Wall Steel Tank	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>					
UL 2080 Fire Resistant Tank (Flameshield)	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>					
UL 2085 Protected Tank (Fireguard)	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>					
UL 2245 Vaulted Tank	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>					
API 650 Field-Fabricated Steel Tank	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>					
Oil Filled Electrical Equipment	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>					
Unknown	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>					
Steel Secondary Containment	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>					
Concrete Secondary Containment	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>					
Earthen Secondary Containment	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>					
Tank shell contacts ground or concrete (not on cradles)	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>					
Other, Please Specify:										
5. Piping Material (mark all that apply)	Pri	Sec	Pri	Sec	Pri	Sec	Pri	Sec	Pri	Sec
Copper	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Carbon Steel/Black Iron	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Galvanized Steel	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Stainless Steel	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Cathodically Protected Steel	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Fiberglass Reinforced Plastic (FRP)	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Extruded Plastic Piping	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Unknown	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Other, Please Specify:										
6. Piping Type (mark all that apply)										
Above Ground	<input type="checkbox"/>		<input type="checkbox"/>		<input type="checkbox"/>		<input type="checkbox"/>		<input type="checkbox"/>	
Below Ground and/or Over Water	<input type="checkbox"/>		<input type="checkbox"/>		<input type="checkbox"/>		<input type="checkbox"/>		<input type="checkbox"/>	
Suction	<input type="checkbox"/>		<input type="checkbox"/>		<input type="checkbox"/>		<input type="checkbox"/>		<input type="checkbox"/>	
Pressure	<input type="checkbox"/>		<input type="checkbox"/>		<input type="checkbox"/>		<input type="checkbox"/>		<input type="checkbox"/>	
7. Substance Currently or Last Stored										
Gasoline	<input type="checkbox"/>		<input type="checkbox"/>		<input type="checkbox"/>		<input type="checkbox"/>		<input type="checkbox"/>	
Aviation Gas	<input type="checkbox"/>		<input type="checkbox"/>		<input type="checkbox"/>		<input type="checkbox"/>		<input type="checkbox"/>	
Kerosene	<input type="checkbox"/>		<input type="checkbox"/>		<input type="checkbox"/>		<input type="checkbox"/>		<input type="checkbox"/>	
Jet Fuel	<input type="checkbox"/>		<input type="checkbox"/>		<input type="checkbox"/>		<input type="checkbox"/>		<input type="checkbox"/>	
Diesel	<input type="checkbox"/>		<input type="checkbox"/>		<input type="checkbox"/>		<input type="checkbox"/>		<input type="checkbox"/>	
Bio-Diesel	<input type="checkbox"/>		<input type="checkbox"/>		<input type="checkbox"/>		<input type="checkbox"/>		<input type="checkbox"/>	
#2 Heating Oil	<input type="checkbox"/>		<input type="checkbox"/>		<input type="checkbox"/>		<input type="checkbox"/>		<input type="checkbox"/>	
#6 Heating Oil	<input type="checkbox"/>		<input type="checkbox"/>		<input type="checkbox"/>		<input type="checkbox"/>		<input type="checkbox"/>

IX. TANKS PERMANENTLY OUT OF SERVICE/DISMANTLED

Tank Identification Number	Tank No. 1	Tank No. 2	Tank No. 3	Tank No.	Tank No.
1. Tank Permanently out of service					
A. Date the tank was last used	not known	not known	not known		
B. Date the tank was emptied of product	1-12-2010	1-12-2010	1-12-2010		
C. Current Status of Tank (Existing in-place, dismantled, etc.)	dismantled	dismantled	dismantled		
2. Has Site Assessment Been Completed?	Yes <input checked="" type="checkbox"/> No <input type="checkbox"/>				
Date of assessment:	January 12, 2010				
3. Evidence of a leak detected?	Yes <input type="checkbox"/> No <input type="checkbox"/>				

X. CERTIFICATION OF COMPLIANCE

1. Spill Prevention, Control, and Countermeasure (SPCC) Plan written in accordance with 40 CFR Part 112.			
A. SPCC Plan in effect at the facility?	Yes <input type="checkbox"/>	No <input type="checkbox"/>	
B. Is Plan stamped by a NH registered P.E.?	Yes <input type="checkbox"/>	No <input type="checkbox"/>	
C. Date of SPCC Plan			
2. Is the facility in compliance with the New Hampshire State Fire Code and the National Fire Protection Association (NFPA):			
A. NFPA 30, Flammable and Combustible Liquids Code, 2000 Edition?	Yes <input type="checkbox"/>	No <input type="checkbox"/>	
B. NFPA 30A, Code for Motor Fuel Dispensing Facilities and Repair Garages, 2000 Edition?	Yes <input type="checkbox"/>	No <input type="checkbox"/>	N/A <input type="checkbox"/>
C. NFPA 31, Standard for the Installation of Oil- Burning Equipment, 2001 Edition?	Yes <input type="checkbox"/>	No <input type="checkbox"/>	N/A <input type="checkbox"/>

XI. OTHER REGISTRATIONS

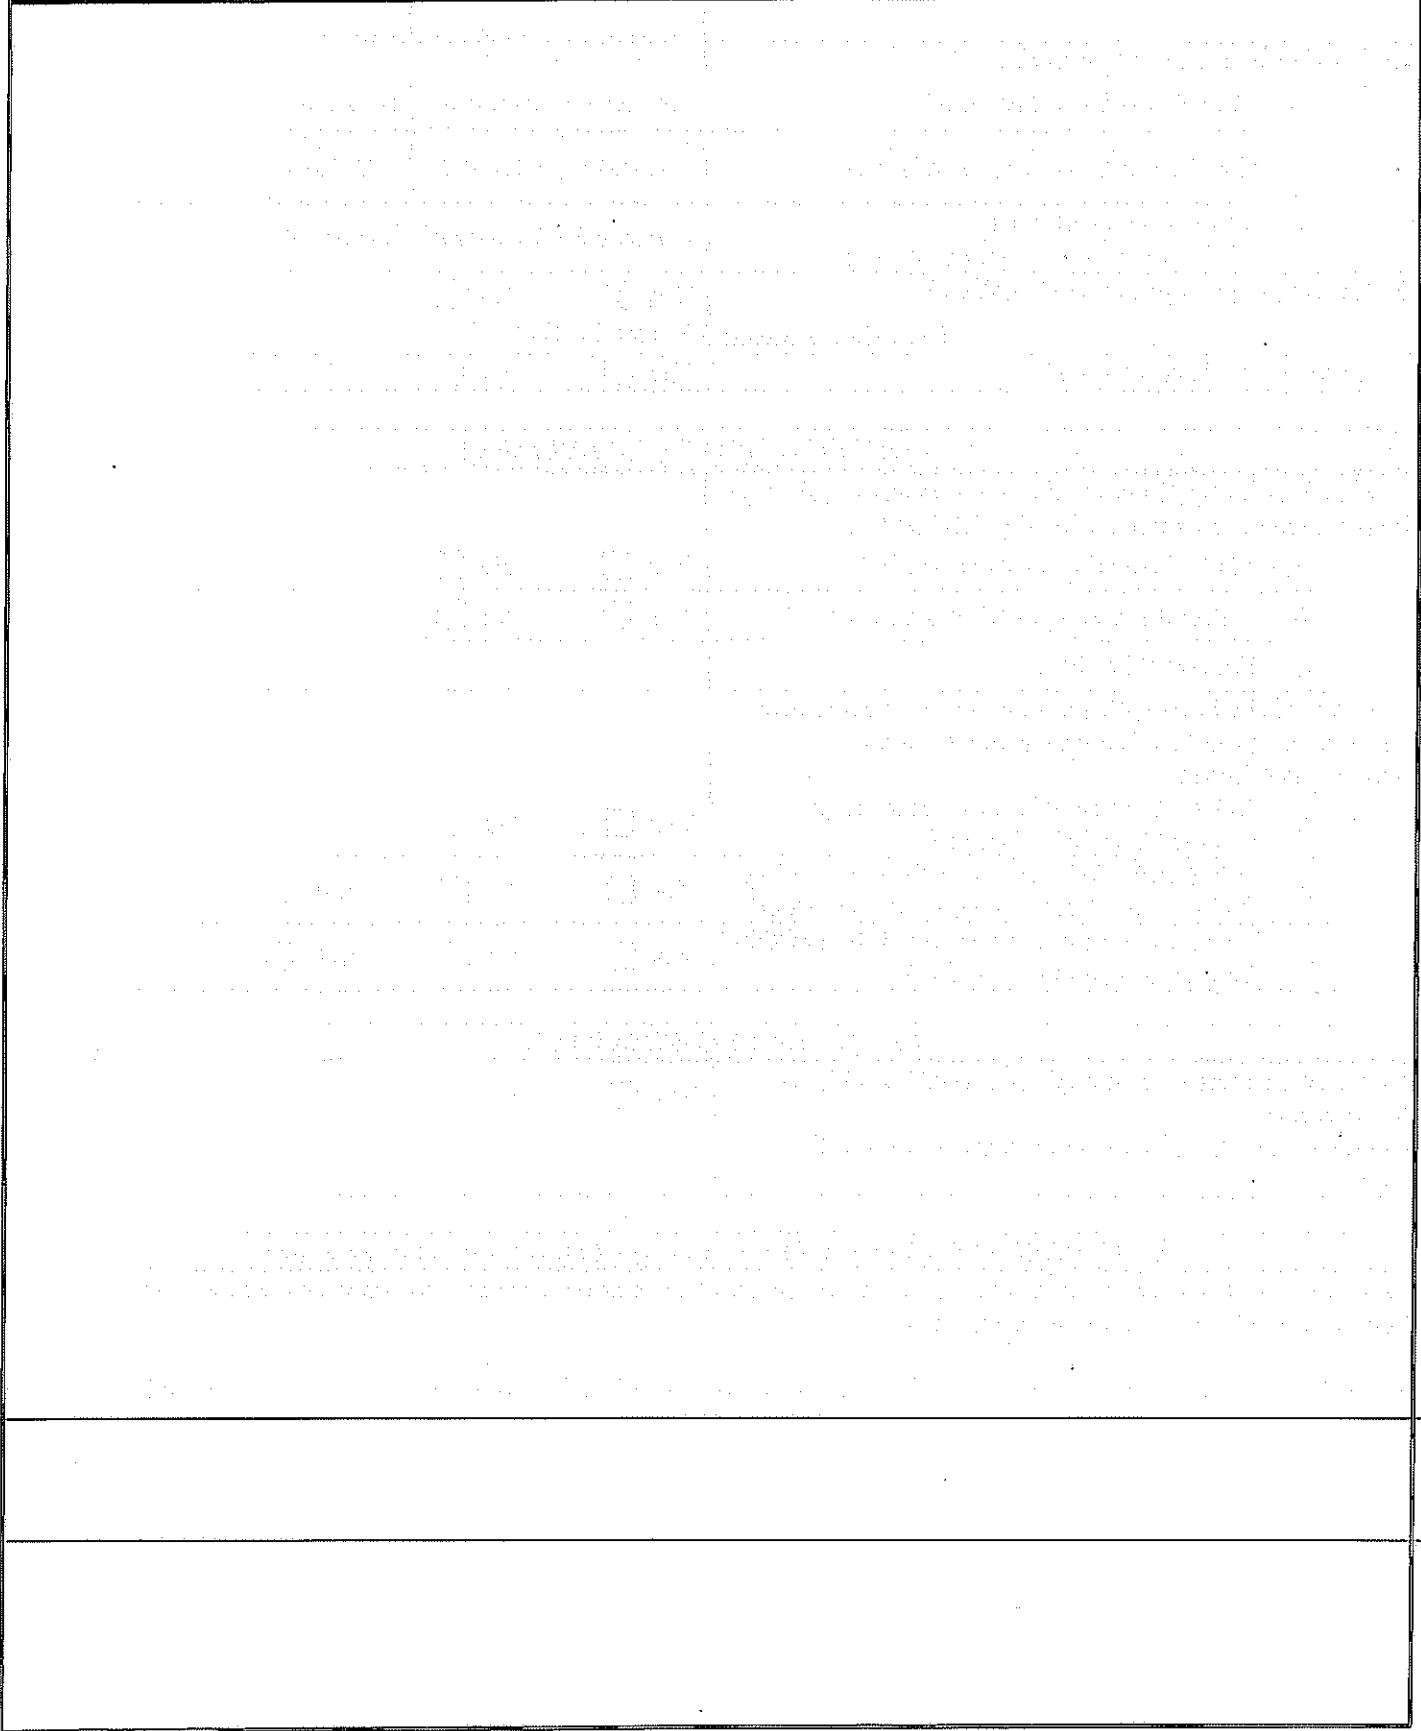

Is there an Underground Storage Tank (UST) Facility at this location?	Yes <input type="checkbox"/>	No <input checked="" type="checkbox"/>
Please provide UST facility Identification Number if known:		

XII. COMMENTS (additional information continued from previous pages)

These tanks were abandoned on this property. We are planning to remove all three in the very near future. After removal, we will have a site assessment done.

1-29-2010: The tanks were removed by CAB earlier this month. GeoInsight is preparing a report on soil sampling.

XIII. SITE AND FACILITY LAYOUT (May be accurate hand sketch) Please include drum storage areas

Authorized by:

Hanibal C. Tayeh, Ph.D.
President/Laboratory Director

Technical Reviewer's Initial:

W

Spectrum Analytical holds certification in the State of New York for the analytes as indicated with an X in the "Cert." column within this report. Please note that the State of New York does not offer certification for all analytes.

Please note that this report contains 14 pages of analytical data plus Chain of Custody document(s). When the Laboratory Report is indicated as revised, this report supercedes any previously dated reports for the laboratory ID(s) referenced above. Where this report identifies subcontracted analyses, copies of the subcontractor's test report is available upon request. This report may not be reproduced, except in full, without written approval from Spectrum Analytical, Inc.

Spectrum Analytical, Inc. is a NELAC accredited laboratory organization and meets NELAC testing standards. Use of the NELAC logo however does not insure that Spectrum is currently accredited for the specific method or analyte indicated. Please refer to our "Quality" web page at www.spectrum-analytical.com for a full listing of our current certifications and fields of accreditation. States in which Spectrum Analytical, Inc. holds NELAC certification are New York, New Hampshire, New Jersey and Florida. All analytical work for Volatile Organic and Air analysis are transferred to and conducted at our 830 Silver Street location (NY-11840, FL-E87936 and NJ-MA012).

Please contact the Laboratory or Technical Director at 800-789-9115 with any questions regarding the data contained in this laboratory report.

CASE NARRATIVE:

The sample temperature upon receipt by Spectrum Analytical courier was recorded as 4.2 degrees Celsius. The condition of these samples was further noted as refrigerated. The samples were transported on ice to the laboratory facility and the temperature was recorded at 3.4 degrees Celsius upon receipt at the laboratory. Please refer to the Chain of Custody for details specific to sample receipt times.

An infrared thermometer with a tolerance of +/- 2.0 degrees Celsius was used immediately upon receipt of the samples.

If a Matrix Spike (MS), Matrix Spike Duplicate (MSD) or Duplicate (DUP) was not requested on the Chain of Custody, method criteria may have been fulfilled with a source sample not of this Sample Delivery Group.

All VOC soils samples submitted and analyzed in methanol will have a minimum dilution factor of 50. This is the minimum amount of solvent allowed on the instrumentation without causing interference. Additional dilution factors may be required to keep analyte concentration within instrument calibration.

See below for any non-conformances and issues relating to quality control samples and/or sample analysis/matrix.

SW846 8260B

Laboratory Control Samples:

1002046-BS1

Analyte out of acceptance range in QC spike but no reportable concentration present in sample.

1,1,2-Trichlorotrifluoroethane (Freon 113)

1002046-BSD1

Analyte out of acceptance range in QC spike but no reportable concentration present in sample.

1,1,2-Trichlorotrifluoroethane (Freon 113)

The spike recovery for this QC sample is outside the established control limits. The sample results for the QC batch were accepted based on LCS/LCSD or SRM recoveries within the control limits.

Carbon disulfide

Samples:

SB06722-01 *AST 1-12-10*

Reporting limits reflect SW846 5030 extraction technique due to interference and/or QC issues using SW846 5035A extraction technique.

SW846 8270C

Samples:

SB06722-01 *AST 1-12-10*

Sample dilution required for high concentration of target analytes to be within the instrument calibration range.

Notes and Definitions

GS1	Sample dilution required for high concentration of target analytes to be within the instrument calibration range.
QC2	Analyte out of acceptance range in QC spike but no reportable concentration present in sample.
QM9	The spike recovery for this QC sample is outside the established control limits. The sample results for the QC batch were accepted based on LCS/LCSD or SRM recoveries within the control limits.
VOC8	Reporting limits reflect SW846 5030 extraction technique due to interference and/or QC issues using SW846 5035A extraction technique.
BRL	Below Reporting Limit - Analyte NOT DETECTED at or above the reporting limit
dry	Sample results reported on a dry weight basis
NR	Not Reported
RPD	Relative Percent Difference

A plus sign (+) in the Method Reference column indicates the method is not accredited by NELAC.

Interpretation of Total Petroleum Hydrocarbon Report

Petroleum identification is determined by comparing the GC fingerprint obtained from the sample with a library of GC fingerprints obtained from analyses of various petroleum products. Possible match categories are as follows:

- Gasoline - includes regular, unleaded, premium, etc.
- Fuel Oil #2 - includes home heating oil, #2 fuel oil, and diesel
- Fuel Oil #4 - includes #4 fuel oil
- Fuel Oil #6 - includes #6 fuel oil and bunker "C" oil
- Motor Oil - includes virgin and waste automobile oil
- Ligroin - includes mineral spirits, petroleum naphtha, vm&p naphtha
- Aviation Fuel - includes kerosene, Jet A and JP-4
- Other Oil - includes lubricating and cutting oil, and silicon oil

At times, the unidentified petroleum product is quantified using a calibration that most closely approximates the distribution of compounds in the sample. When this occurs, the result is qualified as *TPH (Calculated as).

Laboratory Control Sample (LCS): A known matrix spiked with compound(s) representative of the target analytes, which is used to document laboratory performance.

Matrix Duplicate: An intra-laboratory split sample which is used to document the precision of a method in a given sample matrix.

Matrix Spike: An aliquot of a sample spiked with a known concentration of target analyte(s). The spiking occurs prior to sample preparation and analysis. A matrix spike is used to document the bias of a method in a given sample matrix.

Method Blank: An analyte-free matrix to which all reagents are added in the same volumes or proportions as used in sample processing. The method blank should be carried through the complete sample preparation and analytical procedure. The method blank is used to document contamination resulting from the analytical process.

Method Detection Limit (MDL): The minimum concentration of a substance that can be measured and reported with 99% confidence that the analyte concentration is greater than zero and is determined from analysis of a sample in a given matrix type containing the analyte.

Reportable Detection Limit (RDL): The lowest concentration that can be reliably achieved within specified limits of precision and accuracy during routine laboratory operating conditions. For many analytes the RDL analyte concentration is selected as the lowest non-zero standard in the calibration curve. While the RDL is approximately 5 to 10 times the MDL, the RDL for each sample takes into account the sample volume/weight, extract/digestate volume, cleanup procedures and, if applicable, dry weight correction. Sample RDLs are highly matrix-dependent.

Surrogate: An organic compound which is similar to the target analyte(s) in chemical composition and behavior in the analytical process, but which is not normally found in environmental samples. These compounds are spiked into all blanks, standards, and samples prior to analysis. Percent recoveries are calculated for each surrogate.

RE: Phase I Environmental Site Assessment
New England Yard
Laconia, New Hampshire
GSI Project No.: 203324

Dear Mr. Muzzy:

In accordance with your approval, Geotechnical Services, Inc. (GSI) has performed a Phase I Environmental Site Assessment (ESA) of the subject site. The subject site is the City of Laconia's, New England Yard, located on Messer Street, in Laconia, New Hampshire.

A Phase I ESA comprises a number of individual elements whose basic nature and extent are determined in accordance with the standard of care applicable to Phase I ESAs. The standard of care is commonly defined as the care applied by the ordinary practitioner at the time and in the area where the ESA was performed. We believe we have complied with the applicable standard of care, as well as with the Phase I ESA practices and services scope of elements recommended by the American Society for Testing and Materials (ASTM) E1527-00. Note that our services intentionally did not include any inquiries with respect to asbestos, lead-based paint, pesticides, wetlands, herbicides, radon, polychlorinated biphenyls (PCB=s), mold, or urea-formaldehyde.

The accompanying report is an instrument of service of GSI. The report summarizes our findings and relates our opinions with respect to the potential for hazardous materials to exist at the site at levels likely to warrant mitigation pursuant to current guidelines and regulations. Note that our findings and opinions are based on information that we obtained through records review, site review, and related activities. It is possible that other information exists or subsequently has become know, just as it is possible for conditions we observed to have changed after our observation. If such information actually exists, that information could not have been considered in the formulation of GSI=s findings and opinions.

GSI appreciates this opportunity to be of service on this project. If you have any questions regarding this environmental site assessment, please do not hesitate to call us at your convenience.

Very truly yours,

GEOTECHNICAL SERVICES, INC.

Dabra I. Seiken, P.G.
Director of Environmental Services

1.0 INTRODUCTION

1.1 Objective

This report is an instrument of service of Geotechnical Services, Inc (GSI). The report presents the results of a Phase I Environmental Site Assessment (ESA) of the subject site, identified on the City of Laconia's Assessor's Map 406, Block 158, Lot 16. The ESA was performed for the City of Laconia, in accordance with acceptance of GSI's proposal dated August 14, 2002. The services performed included limited research, and a review of specified listings.

A Phase I ESA was conducted to permit formulation of an opinion as to whether surficial or historical evidence indicates the presence of hazardous materials at levels likely to warrant mitigation pursuant to the regulations of the State of New Hampshire's Department of Environmental Services (NHDES). Opinions relative to the hazardous materials potential given in this report are based upon information derived from the most recent site reconnaissance and from other activities described herein. Certain indicators of the presence of hazardous materials may have been latent at the time of our reconnaissance and may subsequently have become observable. In a similar manner, the research effort conducted for a Phase I ESA is limited. Accordingly, it is possible that GSI's research, while fully appropriate for a Phase I ESA, failed to indicate the existence of important information sources. Assuming such sources actually exist, their information could not have been considered in the formulation of GSI's findings and opinions.

1.2 Scope of Services

The scope of services for our Phase I ESA included the following activities:

1. An on-site reconnaissance to make surficial observations for evidence of recognized environmental conditions;
2. While being located in public thoroughfares adjoining properties were observed in an attempt to document property use and to see if any possessed facilities that are likely to use, store, generate, or dispose of hazardous materials;
3. Reviewed available City of Laconia's records pertaining to subject site ownership and usage;
4. Reviewed federal and state regulatory agency environmental databases for the subject site and selected radii around the subject site; and
5. Preparation of this report, which contains a summary of our observations, findings, and conclusions.

No air, water, or soil sampling was performed as part of this assessment. This study did not include assessments for the presence of asbestos, lead-based paint, pesticides, herbicides, radon, polychlorinated biphenyls (PCB=s), wetlands, mold, or urea-formaldehyde. Furthermore, the subject site was not assessed for compliance with the Clean Air Act. This report has been prepared in accordance with the limitations included in Appendix A.

2.0 SITE DESCRIPTION AND LOCATION

The subject site consists of one 2.4-acre parcel located on the City of Laconia's Tax Map 406, Block 158, Lot 16. The location of the subject site is shown on Figure 1. This property is located on the western side of Messer Street and on the eastern shore of Lake Opechee. The subject site includes 2.4-acres of land and contains various buildings. The entrance to the subject site is at the southern edge of the subject site from Messer Street. The subject site reportedly contains no sewer service and no septic system. There is one building (the Garage) where there is water service. There is overhead electrical service to the on site buildings.

The site reconnaissance was performed on September 16, 2003 by GSI. This included a site walk through the buildings. Mr. Dustin Muzzy, Purchasing Specialist for the City of Laconia, and Mr. Thomas Joslin, City of Laconia Department of Public Works employee, accompanied GSI during the site reconnaissance. The site reconnaissance also included observing surrounding properties from public thoroughfares.

The subject site is bounded by Lake Opechee to the west and the State of New Hampshire Railroad to the east. Across the railroad tracks is a property occupied by Ductile and Sons Oil and Coal. Beyond Ductile and Sons Oil and Coal is Messer Street. The subject site is bounded by a residential property to the south and by Irving Oil Bulk Storage facility to the north.

There are currently five structures on the subject site. There is a garage that is located near the southeastern corner of the subject site. This garage is used for storing the City's vacuum truck. This vacuum truck is used to clean catch-basins and sewers. Adjacent to the garage is an unheated building with a dirt floor. This building is used for sand and salt storage. These two buildings are connected by a small cold storage shed. Further north beyond the sand and salt storage building is a building known as the Rodder Shed. The Rodder Shed is used for storage. In the southwestern corner of the subject site is an old barn known as the Blacksmith Shop. The Blacksmith Shop is used for storage of trucks and machinery. North of the Blacksmith Shop is a large building known as the Horse Barn. This building is also used for cold storage.

North of the buildings is an unpaved area of the subject site which is used for storage of building materials. Five or six piles of material were present including piles of: bark mulch, wood chips,

asphalt patch and loam.

Entrance to the subject site is from Messer Street at the southern side of the property where there is an asphalt driveway that trends northeast onto the property. This driveway leads to a portion of the subject site that is used for parking and is paved with asphalt. North of the paved parking area, the pavement ends and there is bare ground. Between the Horse Barn and Lake Opechee there is grass and smaller trees that the City reportedly planted.

3.0 CURRENT AND PAST USES OF THE SITE

3.1 Site Ownership Records

The current property owner is listed in the Laconia Assessor's Office records as the City of Laconia. The tax card for the subject site was obtained from the Laconia Tax Assessor's office.

The following site history has been obtained from available sources, including historical Sanborn Fire Insurance Maps obtained for this project. Historical Sanborn Fire Insurance maps were obtained for the years 1911, 1923, 1929, 1948 and 1976. These maps are provided as part of Appendix B. The history of the subject site, obtained from a review of these maps, is provided below.

- The 1911 map indicated that the subject site contains Laconia Coal and Ice Company. There was a north-south treading trestle from the railroad tracks at the subject site. There was one large, irregularly shaped, structure near the southeastern corner of the subject site. One portion of the structure was labeled "coal pockets" and another area was labeled "wagons".
- The 1923 map indicated that the subject site was occupied by the City Storage Shed. The structure appeared the same as the structure present in 1911 and the trestle was still present.
- The 1929 map showed there were a few new sheds on the subject site.
- The 1948 map shows that the subject site has two new structures near Lake Opechee. These buildings appear to be the Blacksmith Shop and the Horse Barn that are currently present near Lake Opechee. The original structure has been altered and now appears as if a portion of the structure has been destroyed.
- The 1976 Sanborn Map shows that the trestle on the subject site has been scratched off as if it was no longer present. There is a new building near the entrance to the subject site and it is in the location of part of the original structure. This building is of similar size and shape as the building that currently exists at the subject site.

3.2 Previous Environmental Investigations

GSI is not aware of any previous environmental investigations performed at the subject site.

3.3 Historical Adjacent Property Use

Sanborn Fire Insurance maps for the subject site area were reviewed. These maps are provided as part of Appendix B. The maps were reviewed for information that may suggest historical use at surrounding properties. A summary of this information is provided below.

- The 1911 map indicated that southeast of the subject site, and across Messer Street, was the Winnipisee Gas & Electric Light Company Gas Plant.
- The 1923 map indicated that the Gas Plant southeast of the subject site was named Laconia Gas & Electric Company Gas Plant. East of the subject site, between the railroad tracks and Messer Street there was a coal shed.
- The 1929 map showed an Auto Junk Yard was located south of the subject site, beyond what appear to be two residential properties.
- The 1948 map shows that there is a transformer yard located south of the subject site, adjacent to Messer Street. The Auto Junk Yard is no longer present. The coal shed across the railroad tracks adjacent to the subject site is larger. The City Garage is present on the east side of Messer Street, east of the subject site. Laconia Gas and Light Company is now Public Service Company of New Hampshire Gas Plant.
- The 1976 Sanborn Map shows that the Gas Plant site, southeast of the subject site, has fewer tanks.

4.0 SITE HYDROGEOLOGY

4.1 Local Surface Drainage

Topography of the subject site is relatively flat and slopes gradually to the west and Lake Opechee. As shown on Figure 1, topography in the area of the subject site slopes gradually south towards the west and Lake Opechee. One catch-basin was observed at the subject site. This catch-basin was located in a low area in the yard between the Garage Building and the Horse Barn. This catch-basin

likely collects storm-water runoff from the southern portion of the subject site and routes it to Lake Opechee.

4.2 Site Groundwater Flow Directions

Based on field observations and a review of the USGS Laconia, New Hampshire Quadrangle topographic map of the site area, groundwater beneath the subject site is expected to flow primarily in a westerly direction, toward Lake Opechee.

Variations in groundwater flow conditions will occur in the vicinity of the subject site due to the influence of buildings, the presence of underground utilities, variations in subsurface conditions and localized topography. Installation of monitoring wells and long-term groundwater level monitoring would be necessary to evaluate groundwater flow directions more definitively.

5.0 SITE OBSERVATIONS

On August 16, 2003, Ms. Dabra Seiken of GSI conducted a reconnaissance of the subject site, with particular attention paid to visual evidence which would be suggestive of improper handling or storage of hazardous materials at the subject site or the presence or potential presence of petroleum products and/or hazardous materials in the environment. Mr. Dustin Muzzey and Mr. Tom Joslin from the City of Laconia accompanied GSI during the site reconnaissance.

5.1 Exterior Observations

During the site reconnaissance, GSI observed the ground surface and building exterior for visual evidence that would be suggestive of the presence or potential presence of petroleum products and/or hazardous materials in the environment.

The entrance to the subject site is from the south side. The driveway entrance and a portion of the southern part of the subject site is paved with asphalt. The remaining portion of the ground surface is unpaved. Trucks access the northern portion of the subject site by an unpaved access road that runs north-south through the subject site.

Between the Horse Barn and the Lake there were some trees that the City had planted and there was a silt fence at the edge of the Lake to minimize the potential for runoff of salt and sand into the Lake. There was also some abandoned equipment stored in this area. An old trailer and old light poles were observed stored between the Horse Barn and the Lake.

The northern portion of the subject site is used for materials storage. There were large piles of construction material that the City uses. There was a pile of "kids cushion" for placement at playgrounds. There was a pile of bark mulch, a pile of loam, and a pile of woodchips. A pile of soil

and asphalt patch was observed and Dustin Muzzey indicated that the base of this pile contained asphalt patch was a two-foot deep hole in the ground. At the northernmost portion of the subject site were two large, steel, above ground storage tanks (ASTs). These ASTs were rusted and appeared to be no longer in use. Mr. Muzzey indicated that the ASTs did not belong to the City and were likely on the neighboring property.

5.2 Interior Observations

Information regarding the use and condition of the interior of the buildings during the site walk was provided by Mr. Muzzey and Mr. Joslin and by observations made by GSI.

5.2.1 The Garage Building

The garage building appeared to be in fair condition. Evidence of a leak in the roof was observed. This is reportedly the only building on the subject site that is heated and the only building that has municipal water service.

The garage building is used primarily for storage and cleanout of the City's vacuum truck. The garage is built on a concrete slab. The vacuum truck is used to clean out catch basins and sewers that cannot be cleaned out using high-pressure water. The garage is also used to store line paint. About 30, 5-gallon pails of line paint were observed during the site reconnaissance. The garage contained a 250-gallon capacity AST for heating oil storage. Stains were not observed on the floor in the vicinity of the AST. There is a workshop area in the garage that contains numerous gallon-containers of paint. The garage also contained empty plastic 55-gallon containers. These containers are reportedly used for garbage collection.

There is a floor-drain in the middle of the garage that was reportedly connected to the storm-sewer system. About 5 years ago this floor drain was reportedly plugged. The storm-sewer system is likely to drain to the Lake. The storm-sewer catch-basin outside the garage building reportedly has a separator bag that is periodically changed by the sewer department. There is a cold storage area between the garage building and the Salt and Sand Storage Barn.

5.2.2 Salt and Sand Storage Barn

The salt and sand storage barn is located adjacent to the garage. It is a long, open, wooden building with a dirt floor. At the time of the site reconnaissance sand and salt were stored in this building. The barn appears to be old and in fair condition. Pigeons are living in this barn and pigeon droppings were observed.

5.2.3 Blacksmith Shop

The Blacksmith shop is a one-story wooden barn with metal siding. This building appears to be in poor condition with broken windows and ceiling. This building is used for equipment storage and

has been for at least the past eleven years. This structure was reportedly used as a blacksmith shop and it used to contain an old potbellied stove for use in blacksmithing. The building contained a bulldozer and other equipment. The floor of this building was dirt. About two-thirds of the dirt floor inside this building was heavily stained. Visual and olfactory evidence suggested that the floor was stained with petroleum products. Mr. Joslin indicated that during some rain events an oil sheen can be seen on the Lake adjacent to the Blacksmith Shop.

5.2.4 Horse Barn

The Horse Barn is a two-story structure built on a concrete slab. The building was designed to house horses. The floor slants to the middle from both sides where the horse stalls were. This building was reportedly built or moved to this location in the 1940's. The City of Laconia reportedly did have horses that were kept in this building. For at least the past 25-years, the structure has been used for storage. During the site reconnaissance the following equipment was observed stored at the Horse Barn: a pressure washer, a roller, two cement-mixers, a space heater, air compressors, two compressed gas cylinders, a tar kettle and sewer cleanout equipment. The ground floor of this structure also contained about eleven, old, steel, 55-gallon drums. These drums were not labeled and appeared to be full. The site representatives indicated that they could be filled with asphalt sealer. Bags of calcium chloride and Portland cement were also observed in the Horse Barn.

Two floor drains were observed in the floor of the Horse Barn. These floor drains appeared to be about 4-inches in diameter and were located near the center of the building. Site Representatives did not know what the floor drains had been used for. They indicated that the floor drains had not been used in their memory. These floor drains could have been used to allow wash water and horse waste to drain out of the barn after washing out the horse stalls.

The second story of the Horse Barn contained equipment. There was some storage of chemicals observed on the second story. There was a 7-gallon pail of herbicide and a 7-gallon pail of a corrosive. There were three 5-gallon pails, one was labeled as "Gold Bond" and two were unlabelled. There was an old compressed gas or propane container.

Adjacent to the Horse Barn is a shed known as the Hot Top Shed. This shed had a concrete floor that was stained with what appeared to be oil. This shed was reportedly previously used to store Hot Top and was observed at the time of the site reconnaissance to be used for storage of small items such as shovels and traffic cones.

Adjacent to the Hot Top Shed is another shed known as the Tire Storage Shed. There was no access available to the Tire Storage Shed. It was reported that it is only used for storage of tires.

5.2.5 Rodder Shed

The Rodder Shed is located adjacent to the Salt and Sand Storage Barn, to the north. The Rodder shed has a paved floor, either concrete or asphalt. It is used for the storage of items such as signs,

fences, wood, crates, an air compressor. There were about 20, 40-gallon capacity, plastic bags full of what Mr. Joslin indicated was asbestos-containing material that had been collected during a hazardous waste collection day in Laconia about two years ago.

Floor drains were not observed in the Rodder Shed.

5.3 Adjoining Property Use & Observations

The subject site is bounded by residential, industrial and commercial use properties. The relative locations of these properties are shown on Figure 2. The current use of adjoining properties is summarized in Section 2.0 and observations of adjoining properties that suggest the use or storage of petroleum products or hazardous materials are discussed below.

During our site observations, the exteriors of adjacent properties were observed for evidence of petroleum products and/or hazardous materials in the environment at adjacent sites. It should be stressed that no interior observations were made at any of the adjacent facilities. Ductile and Sons Oil and Coal is located adjacent to the subject site to the west. Irving Oil Bulk storage was located adjacent to the subject site to the north.

6.0 ENVIRONMENTAL HISTORY

6.1 File Reviews

Environmental Data Resources (EDR), Inc. was contracted to conduct a Priority Risk Report for the subject site and adjoining areas based on search distance criteria set forth within ASTM requirements. The report prepared by EDR was reviewed and annotated to fulfill the requirements for specific search distances from the subject site, as required under the ASTM guideline. The list below summarizes the databases and search distances from the subject site:

FEDERAL DATABASE	RADIUS SEARCH DISTANCE	NUMBER OF SITES IN SEARCH DISTANCE
National Priorities List (NPL) and Proposed NPL	1 mile	0
RCRA Corrective Actions (CORRACTS) Facilities	1 mile	0
Comprehensive Environmental Response, Compensation, and Liability Information System (CERCLIS)	1/2 mile	0
CERCLIS No Further Remedial Action Planned (NFRAP)	1/4 mile	0
Resource Conservation and Recovery Act (RCRA) Treatment	1/2 mile	0

Storage and Disposal (TSD) Facilities		
RCRA Large Quantity Generators List	¼ mile	1
RCRA Small Quantity Generators List	¼ mile	7
Emergency Response Notification (ERNS)	site only	0

STATE DATABASE	RADIUS SEARCH DISTANCE	NUMBER OF SITES IN SEARCH DISTANCE
State Hazardous Waste Site List (SHWS)	1 mile	6
State Registered Solid Waste Facilities	1 mile	0
State Leaking Underground Storage Tank (LUST) List	1/2 mile	9
Allsites List	1/2 mile	17
State Registered USTs List	¼ mile	11

The subject site is not identified on any of the databases. Many of the sites identified on the EDR report, due to the nature of the database on which they are listed and/or due to the location of the site in relation to the subject site, are not considered likely to impact the subject site. Sites of possible concern (due to the nature of the database they were listed on and/or due to their location) were identified on the EDR report. Some of these sites were further researched on the NHDES Geographical Information System (GIS). Several sites are located hydraulically upgradient and/or cross-gradient of the subject site and potentially have soil and/or groundwater contamination that could have impacted the subject site, or could in the future. These sites are discussed below.

The Messer Street Coal Tar Site is located south of the to the subject site, beyond the two residential properties which abut the subject site. This site comprises property on both sides of Messer Street. The Messer Street Site is listed on the Allsites list, the Spills list and the New Hampshire Hazardous Waste Site list. This site has contaminated soil, groundwater and surface water. There is a dense-phase non-aqueous liquid (DNAPL) issue at this site suggesting that the levels of contamination are high. In addition activity and use limitations (AULs) have been recorded on the deeds to four properties affected by this site (Map 406, Lot 158-13; Map 406, Lot 158-30; Map 412, Lot 294-65 and Map 406, Lot 294-28.). These AULs restrict use of the properties due to contamination of soil, groundwater and/or surface water.

The Manter Oldsmobile Pontiac site located at 27 Bisson Avenue is a LUST site that appears to be

less than one-eighth of a mile west (hydraulically upgradient) of the subject site. This site is apparently also known as a Department of Public Works Facility and the City of Laconia is performing groundwater monitoring at this site. Appendix B contains a report indicating elevated levels of polycyclic aromatic hydrocarbons (PAH) in a groundwater sample collected at the site.

The Irwin Motors site is located adjacent to the Manter Oldsmobile Pontiac site is another LUST site that in less than one-eighth mile west (hydraulically upgradient) from the subject site.

The Department of Public Works Garage, located at 257 Messer Street, is a LUST site that also appears to be located less than one-eighth of a mile west (hydraulically upgradient) of the subject site. According to information obtained from the NHDES GIS, this site was discovered in 1988 and investigation and remediation of this site is ongoing. There were elevated concentrations of gasoline in the groundwater and there was non-aqueous phase liquid observed in monitoring wells. In January, 2003 the highest concentration of benzene in groundwater samples was reportedly 2,010 parts per billion (ppb). The site was apparently scheduled for excavation of contaminated soil in August or September of 2003.

The Irving Oil Bulk Storage site, located at 308 Messer Street, is adjacent to the subject site to the north. This site apparently had 10 ASTs that were closed in 2000. Nine of these ASTs had been installed in 1922 and the tenth AST had been installed in 1980. This site had a release and a non-aqueous phase liquid was observed in monitoring wells at this site.

The Ductile and Sons site, adjacent to the subject site, has four registered above ground storage tanks (ASTs).

6.2 Interviews

During the site reconnaissance, Mr. Tom Joslin indicated that the northern portion of the subject site had been used many years ago as a landfill for the disposal of waste.

Senior Foreman for the City of Laconia, Mr. Lee Thompson, was interviewed on the telephone. Mr. Thompson has been a City employee for 25-years. Mr. Thompson did not have knowledge of environmental problems or spills at the subject site or the abutting properties. Mr. Thompson did mention the release from the USTs at the Messer Street Garage and indicated that the USTs have been removed from the ground and the site is being monitored.

7.0 CONCLUSIONS AND RECOMMENDATIONS

This report summarizes information obtained during a Phase I - Environmental Site Investigation that was performed on the property known as the New England Yard on Messer Street in Laconia, New Hampshire. The site assessment included a site reconnaissance, visual observations of the

adjacent property usage from public thoroughfares, a review of local files, and an electronic data search of Federal and State records. No subsurface investigations or laboratory analyses were performed as part of the assessment.

In summary, it is the opinion of Geotechnical Services, Inc., that the presence of stained soil in the Blacksmith Shop is likely to have adversely affected the soil and groundwater quality in the area of the Blacksmith Shop. In addition, the reporting that the northern portion of the subject site had been used as a landfill, though not documented, could have adversely affected the soil and groundwater quality at the subject site. In addition, the subject site appears to have a history of being occupied by a coal company. This could have impacted the environment at the subject site.

In addition, there is a possibility that the soil and/or groundwater beneath the subject site has been or may be adversely affected by the environmental problems at surrounding properties.

Furthermore, if there is impacted soil or groundwater beneath the subject site, precautions should be taken to protect workers to exposure to potential exposure during site improvement work that would involve excavation.

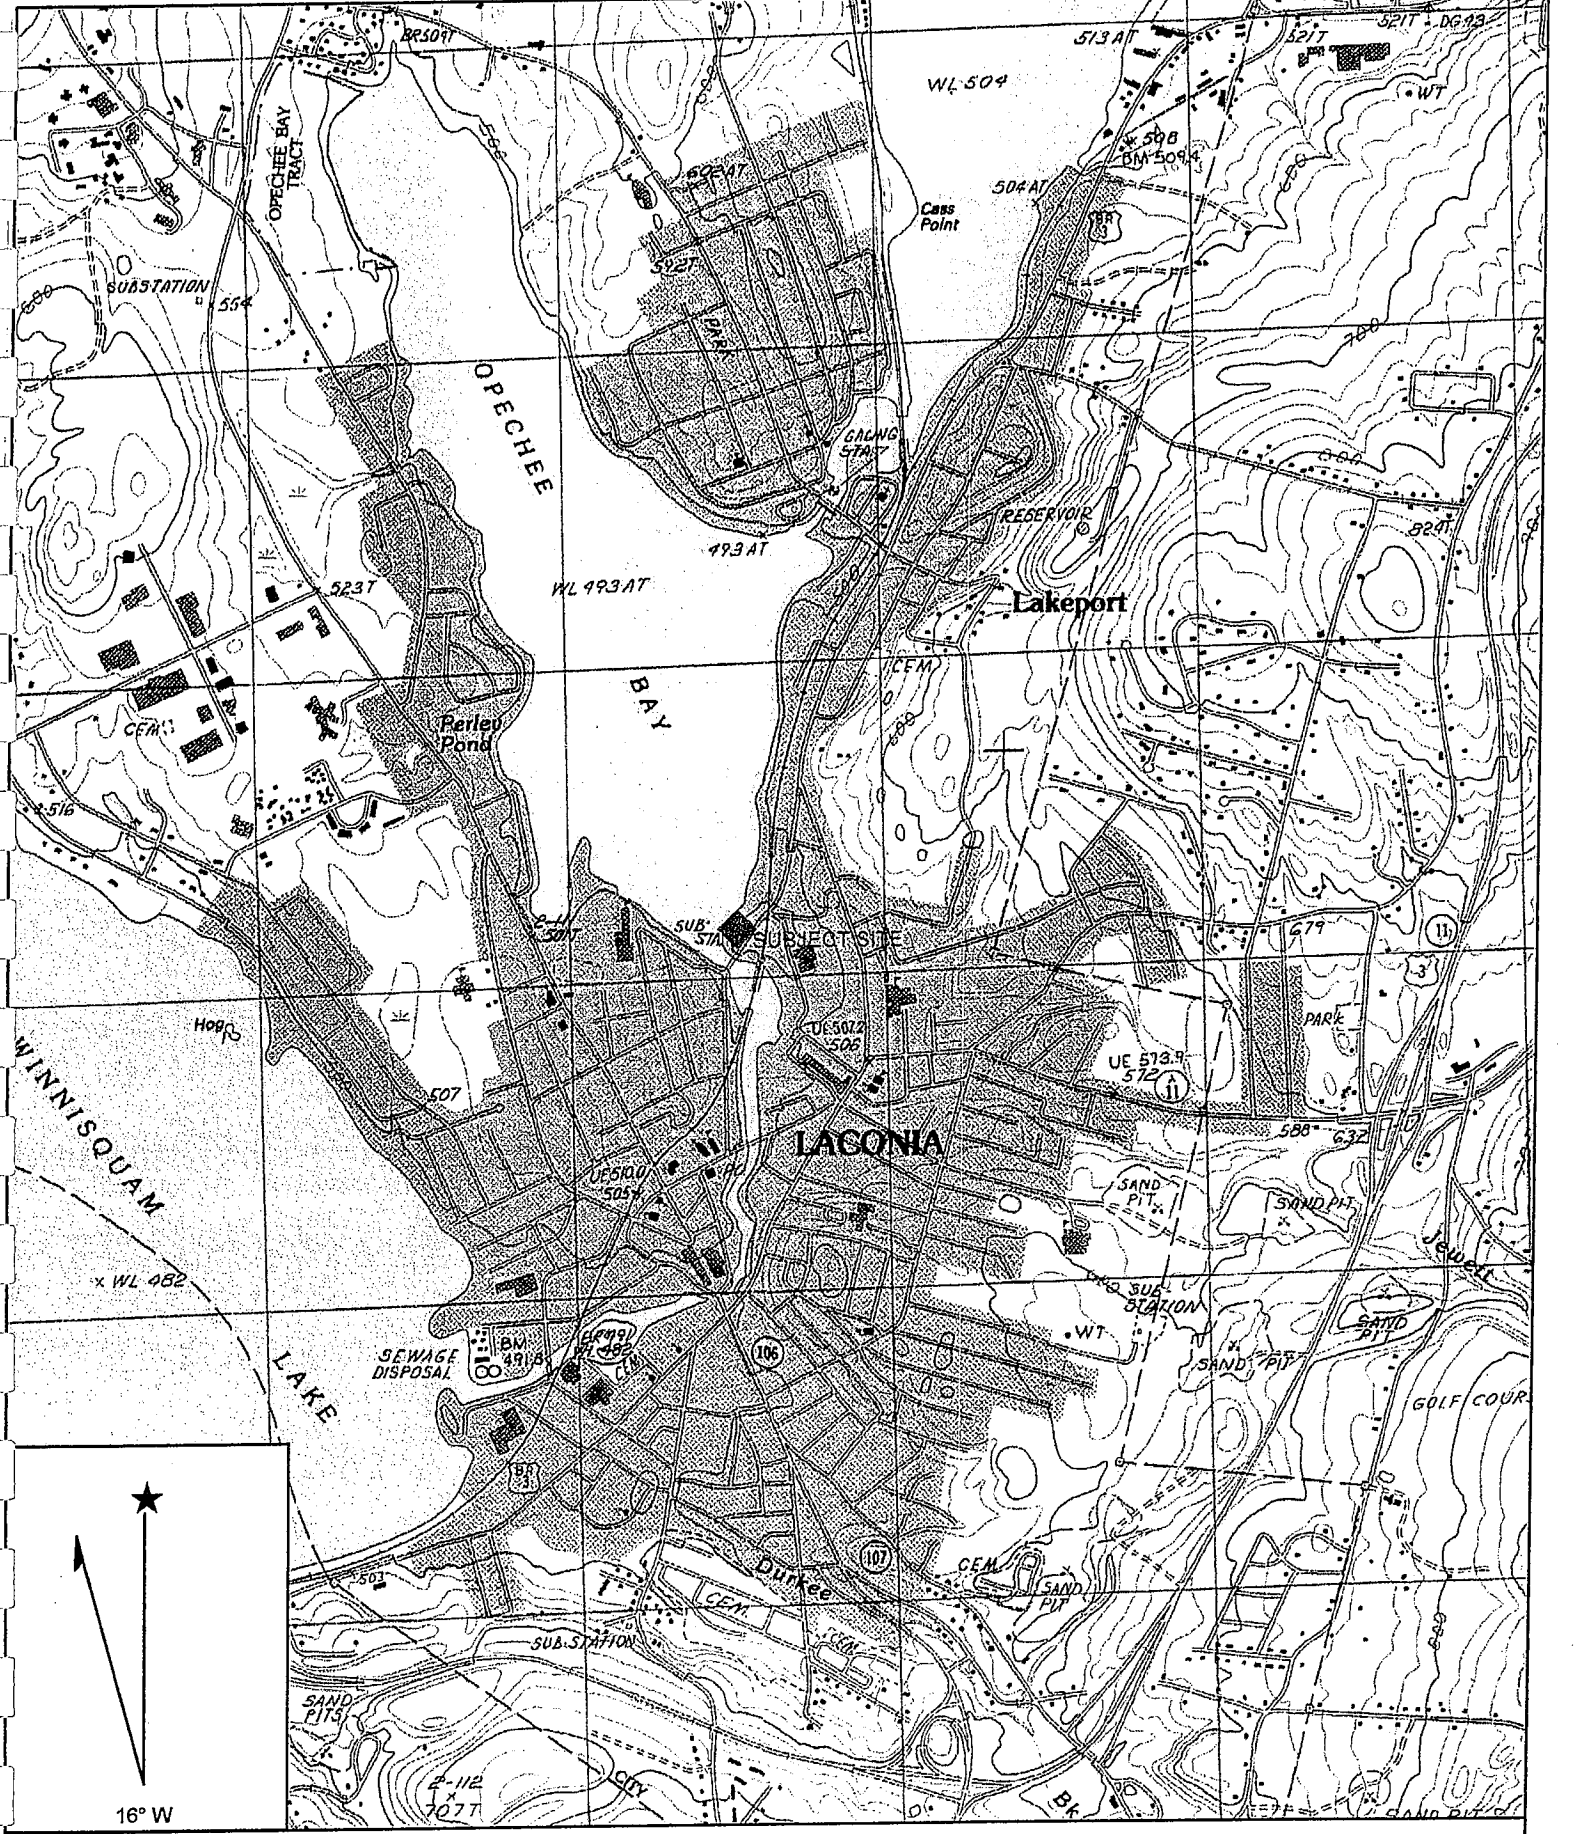

It is recommended by GSI that the impacted soil in the Blacksmith Shop be addressed. A subsurface investigation should be performed to determine the extent of soil contamination at the Blacksmith Shop and if the groundwater and surface water have been affected. In addition, an interim remedial action should be initiated to address the impacted soil.

The subsurface investigation could also be used to investigate the possibility that the reported landfilling activity and coal company at the subject site has affected the soil and or groundwater quality.

To more thoroughly assess the likelihood of surrounding properties affecting the subject site, further review of the environmental reports for the surrounding sites could be performed. The subsurface investigation could also be designed to investigate the possible impact to the subject site by the surrounding properties.

Finally, GSI recommends that the waste and unused chemicals stored at the subject site be sampled, analyzed and disposed of in accordance with local, state and federal regulations.

GSI PROJECT: New England Yard
Laconia, NH - Phase I ESA

GSI PROJECT #: 203324

APPENDIX A
LIMITATIONS

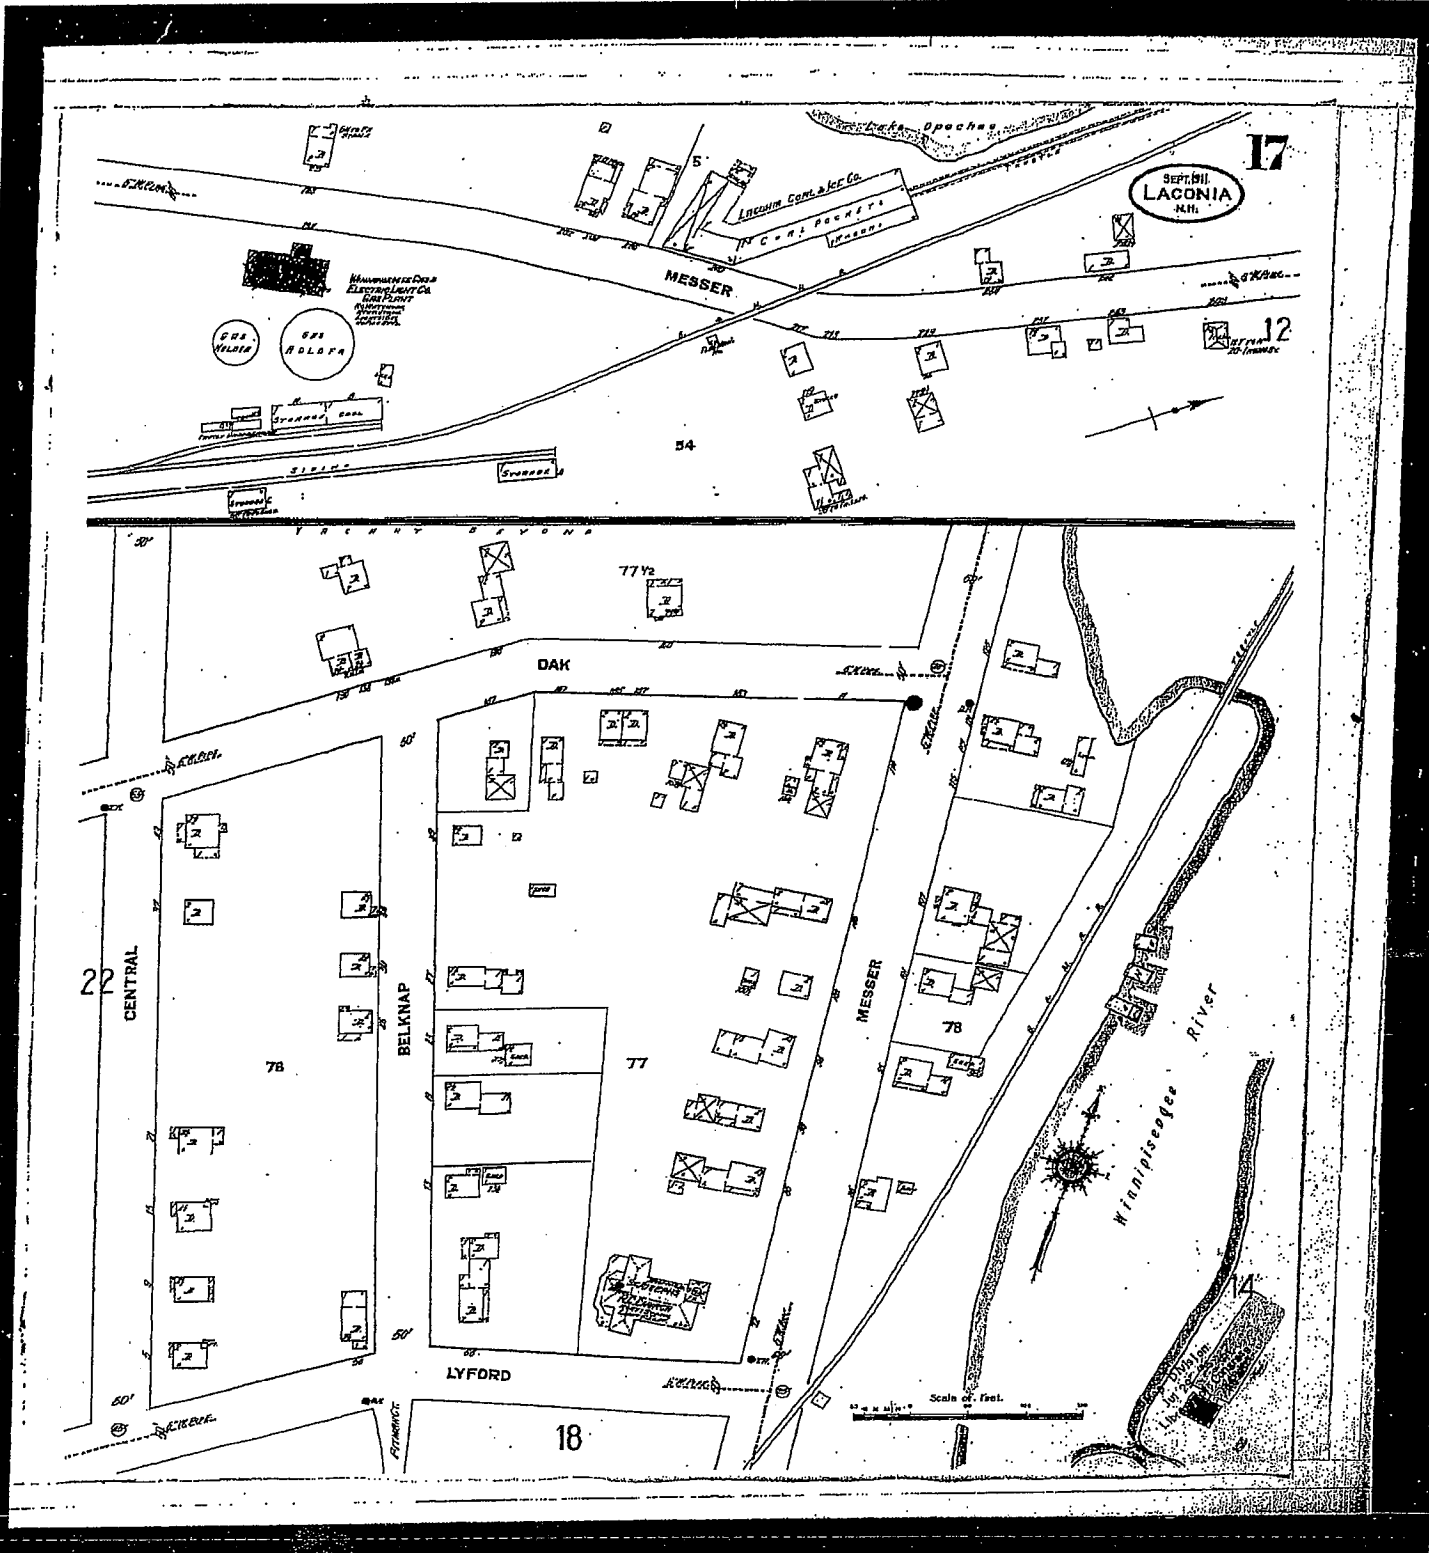

LIMITATIONS

1. The conclusions presented in the report were developed based on information gathered during the completion of this assessment, as outlined within the executed agreement between Geotechnical Services, Inc. (GSI) and the Client. The conclusions were not based on scientific tasks or procedures beyond the scope of this contract. This report was completed in accordance with the executed contract.
2. GSI has relied on information provided by federal, state and local officials, and other historical/informational sources that pertains to the site property. GSI has, to the best of its ability, attempted to use informational sources that are accurate and reputable. However, we cannot guarantee the accuracy of the information gathered from these sources.
3. GSI cannot be held responsible for omissions of information pertaining to the presence of hazardous materials at the site property that was available, but not provided to us by parties involved with the property transaction (i.e., owner, occupant, seller, buyer, attorneys, bank council, title examiner, etc.) Should these or other related parties become aware of such information following issuance of GSI=s assessment report, this information should be forwarded to GSI as soon as practical in order for us to evaluate the information, and make suitable changes to our report, if deemed necessary.
4. Unless otherwise specified in the report, GSI did not perform testing or analyses to determine the presence or concentration of asbestos, lead-based paint, pesticides, herbicides, urea-formaldehyde, polychlorinated biphenyls (PCB=s), mold, or radon at the site or in the environment at the site.
5. The purpose of GSI=s assessment was to render an opinion as to the possible presence of recognized environmental conditions or hazardous material in the soil or groundwater environment at the site property. Checking compliance of current or past owners of the site property with all federal, State, and/or local environmental regulation was beyond the scope of this assessment.
6. Without subsurface explorations and sampling/analyses of media, GSI cannot be responsible for hazardous materials present at the site that were not readily identifiable during the course of the historical/regulatory database or observed at the ground surface during the site reconnaissance.
7. No laboratory analyses of soil or groundwater samples were performed as part of the assessment, except where otherwise identified.
8. This environmental study has been prepared for the exclusive use of the City of Laconia, for use in a preliminary environmental evaluation of the site. This report and the findings contained herein shall not, in whole or part, be disseminated or conveyed to any other party, nor used by any other party, in whole or in part, without prior written consent of GSI. This report has been prepared in accordance with generally accepted environmental assessment practices. No other warranty, expressed or implied, is made.

RE: Monitoring Well Replacement and Ground Water Sampling
Department of Public Works Facility – NHDES #198605641
27 Bisson Avenue
Laconia, New Hampshire

Dear Mr. Wetherbee:

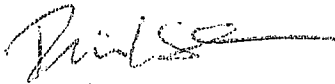

GeoInsight, Inc. (GeoInsight), at the request of the City of Laconia (the City), transmits the attached soil boring/well completion log, laboratory analytical report, and sketch map associated with the installation of one replacement monitoring well and ground water sampling of that well at the Public Works facility at 27 Bisson Avenue in Laconia, New Hampshire.

On August 18, 2003, GeoInsight oversaw Geosearch, Inc. of Sterling, Massachusetts install one replacement monitoring well (designated MW-2R) adjacent to the intermittent drainage swale located along the northern property boundary. A sketch map illustrating the location of the MW-2R monitoring well is presented as Attachment 1. The well was installed using standard 4.25-inch inside diameter hollow-stem auger drilling equipment and was constructed of 2-inch diameter polyvinyl chloride (PVC) riser and well screen material. The screened interval of the monitoring well was installed from approximately 2 feet to 12 feet below surface grade. Additional well construction details and soil lithology are included on the soil boring/well completion log in Attachment 2. The well was developed on August 18, 2003 by pumping with a submersible Whale[®] pump.

On September 5, 2003, GeoInsight personnel gauged depth to ground water from the top of the PVC well riser (1.85 feet below PVC) and purged the well of at least three well-volumes of water using a new, disposable bailer. After well purging and a short stabilization period, ground water was collected from the well using the bailer and was field filtered using a 0.45-micron filter into a laboratory supplied 1-liter amber container. The ground water sample was delivered to Aquarian Analytical, Inc. of Canterbury, New Hampshire for analysis of polycyclic aromatic hydrocarbons (PAHs) by United States Environmental Protection Agency (USEPA) Method 8270. The analytical report for the ground water sample collected from well MW-2R on September 5, 2003 is included in Attachment 3.

Please contact us at (603) 434-3116 with any questions regarding the installation or ground water sampling of monitoring well MW-2R.

Sincerely,
GEOINSIGHT, INC.

Darrin L. Santos
Project Geologist

As part of Aquarian's ongoing quality assurance program, all analyses included the following quality assurance measures.

Samples were received in an acceptable condition.

Samples were prepared and analyzed within the appropriate hold time specified in the method referred to on the analyses sheet.

The instrument that was used for the analyses was calibrated and/or tuned at the required frequency.

A daily calibration check was performed.

A daily blank was run, and contamination was not observed at levels that would affect the analyses.

For all work, internal standards, and surrogates gave appropriate response levels.

Matrix spikes were added where appropriate, and recoveries were within the acceptable range.

Duplicates were run at the frequency specified in the applicable state or federal regulations.

In addition to the above steps, all original-raw data is on file at Aquarian Analytical's offices for inspection when required.

Important with any questions or comments (TM) Report

This is The EDR FieldCheck (TM) Report. Through its continuing emphasis in online technological advancements, EDR has developed the FieldCheck (TM) system, which enables EDR's customers to make certain online modifications to the maps and text contained in EDR Radius Map Reports. With FieldCheck (TM), an EDR customer can relocate and/or delete plotted sites and/or plot or delete orphan sites that would otherwise appear or be noted with an EDR Radius Map Report. Such modifications may be based on site visits, independent data verification and/or other actions taken or decisions made by EDR's customer. As a result, the maps and text contained in The EDR FieldCheck (TM) Report that you receive may have been so modified. Please note: EDR has not taken any action to verify any such modifications, and this report and the findings set forth herein must be read in light of this fact. GEOTECHNICAL SERVICES, INC. should be contacted for information concerning all such modifications.

Disclaimer

EXECUTIVE SUMMARY

At the request of GEOTECHNICAL SERVICES, INC., a search of the environmental records covering the area detailed herein was conducted by Environmental Data Resources, Inc. (EDR). This report was derived from the results of such search, which, as conducted by EDR, met the government records search requirements of ASTM Standard Practice for Environmental Site Assessments, E 1527-00. Search distances were per ASTM standard or custom distances requested by the user.

NOTE: ALL MAPS AND TEXT INCLUDED HEREIN MAY HAVE BEEN MODIFIED BY GEOTECHNICAL SERVICES, INC. BASED ON SITE VISITS, INDEPENDENT DATA VERIFICATION AND/OR OTHER ACTIONS TAKEN OR DECISIONS MADE BY GEOTECHNICAL SERVICES, INC.. EDR HAS NOT TAKEN ANY ACTION TO VERIFY ANY OF SUCH MODIFICATIONS, AND THIS REPORT AND THE FINDINGS SET FORTH HEREIN MUST BE READ IN LIGHT OF THIS FACT. GEOTECHNICAL SERVICES, INC. SHOULD BE CONTACTED FOR INFORMATION CONCERNING ALL SUCH MODIFICATIONS.

TARGET PROPERTY INFORMATION

ADDRESS

MESSER STREET
LACONIA, NH 03246

COORDINATES

Latitude (North): 43.536900 - 43° 32' 12.8"
Longitude (West): 71.468000 - 71° 28' 4.8"
Universal Transverse Mercator: Zone 19
UTM X (Meters): 300588.8
UTM Y (Meters): 4823183.0
Elevation: 500 ft. above sea level

USGS TOPOGRAPHIC MAP ASSOCIATED WITH TARGET PROPERTY

Target Property: 2443071-E4 LACONIA, NH
Source: USGS 7.5 min quad index

TARGET PROPERTY SEARCH RESULTS

The target property was not listed in any of the databases searched by EDR.

DATABASES WITH NO MAPPED SITES

No sites were found in an online review and analysis by GEOTECHNICAL SERVICES, INC. of EDR's search of available ("reasonably ascertainable") government records either on the target property or within the ASTM E 1527-00 search radius around the target property for the following databases:

FEDERAL ASTM STANDARD

NPL..... National Priority List
Proposed NPL..... Proposed National Priority List Sites
CERCLIS..... Comprehensive Environmental Response, Compensation, and Liability Information System

EXECUTIVE SUMMARY

CERC-NFRAP..... CERCLIS No Further Remedial Action Planned
CORRACTS..... Corrective Action Report
RCRIS-TSD..... Resource Conservation and Recovery Information System
ERNS..... Emergency Response Notification System

STATE ASTM STANDARD

SWF/LF..... Solid Waste Facility Information

FEDERAL ASTM SUPPLEMENTAL

CONSENT..... Superfund (CERCLA) Consent Decrees
ROD..... Records Of Decision
Delisted NPL..... National Priority List Deletions
FINDS..... Facility Index System/Facility Identification Initiative Program Summary Report
HMIRS..... Hazardous Materials Information Reporting System
MLTS..... Material Licensing Tracking System
MINES..... Mines Master Index File
NPL Liens..... Federal Superfund Liens
PADS..... PCB Activity Database System
US BROWNFIELDS..... A Listing of Brownfields Sites
DOD..... Department of Defense Sites
RAATS..... RCRA Administrative Action Tracking System
TRIS..... Toxic Chemical Release Inventory System
TSCA..... Toxic Substances Control Act
SSTS..... Section 7 Tracking Systems
FTTS..... FIFRA/ TSCA Tracking System - FIFRA (Federal Insecticide, Fungicide, & Rodenticide Act)/TSCA (Toxic Substances Control Act)

STATE OR LOCAL ASTM SUPPLEMENTAL

AST..... Registered Aboveground Petroleum Storage Tank Database
LAST..... Listing of All Sites
NH Spills..... Listing of All Sites

BROWNFIELDS DATABASES

US BROWNFIELDS..... A Listing of Brownfields Sites
Inst Control..... Activity and Use Restrictions

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property. Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in *bold italics* are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

EXECUTIVE SUMMARY

FEDERAL ASTM STANDARD

RCRIS: Resource Conservation and Recovery Information System. RCRIS includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs): generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month. Small quantity generators (SQGs): generate between 100 kg and 1,000 kg of hazardous waste per month. Large quantity generators (LQGs): generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste from the generator off-site to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

An online review and analysis by GEOTECHNICAL SERVICES, INC. of the RCRIS-LQG list, as provided by EDR, and dated 07/11/2003 has revealed that there is 1 RCRIS-LQG site within approximately 0.25 miles of the target property.

STATE ASTM STANDARD

SHWS: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites

EXECUTIVE SUMMARY

may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Environmental Services' Hazardous Waste Inventory list.

An online review and analysis by GEOTECHNICAL SERVICES, INC. of the SHWS list, as provided by EDR, has revealed that there are 6 SHWS sites within approximately 1 mile of the target property.

NH ALLSITES: Provides information on sites in New Hampshire, with activities that either have resulted in groundwater contamination or pose a potential hazard to groundwater supplies. The regulated activities and groundwater hazards include: confirmed releases of oil or hazardous materials to the soil and/or groundwater as a result of discharges, spills, and removal of underground storage tanks; underground injection wells such as floor drains, leaching galleries, and septic systems anything other than domestic wastewater; large discharges of wastewater such as domestic wastewater septic systems which are designed to discharge more than 20,000 gpd, land application of wastewater treatment facility effluent (spray irrigation, rapid infiltration rapid infiltration basins, etc.) and unlined septage and wastewater lagoons; unpermitted hazardous waste storage facilities; landfills and other waste repositories in which groundwater quality is at risk.

An online review and analysis by GEOTECHNICAL SERVICES, INC. of the ALLSITES list, as provided by EDR, has revealed that there are 17 ALLSITES sites within approximately 0.5 miles of the target property.

EPA Waste Codes Addendum

Code	Description
D001	IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.
D002	A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.
D009	MERCURY
D018	BENZENE
F002	THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2-TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE LISTED IN F001, F004, OR F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.
F003	THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NON-HALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS, AND, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.
F005	THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Elapsed ASTM days: Provides confirmation that this EDR report meets or exceeds the 90-day updating requirement of the ASTM standard.

FEDERAL ASTM STANDARD RECORDS

NPL: National Priority List

Source: EPA
Telephone: N/A

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

Source: EPA
Telephone: 703-413-0223

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 06/16/03
Date Made Active at EDR: 08/01/03
Database Release Frequency: Quarterly

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Source: EPA
Telephone: 703-413-0223

As of February 1995, CERCLIS sites designated "No Further Remedial Action Planned" (NFRAP) have been removed from CERCLIS. NFRAP sites may be sites where, following an initial investigation, no contamination was found, contamination was removed quickly without the need for the site to be placed on the NPL, or the contamination was not serious enough to require Federal Superfund action or NPL consideration. EPA has removed approximately 25,000 NFRAP sites to lift the unintended barriers to the redevelopment of these properties and has archived them as historical records so EPA does not needlessly repeat the investigations in the future. This policy change is part of the EPA's Brownfields Redevelopment Program to help cities, states, private investors and affected citizens to promote economic redevelopment of unproductive urban sites.

RCRIS: Resource Conservation and Recovery Information System

Source: EPA
Telephone: 800-424-9346
Resource Conservation and Recovery Information System. RCRIS includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs): generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month. Small quantity generators (SQGs): generate between 100 kg and 1,000 kg of hazardous waste per month. Large quantity generators (LQGs): generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month. Transporters are individuals or entities that move hazardous waste from the generator off-site to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Date of Government Version: 07/11/03

FEDERAL ASTM SUPPLEMENTAL RECORDS

BRS: Biennial Reporting System

Source: EPA/NTIS
Telephone: 800-424-9346
The Biennial Reporting System is a national system administered by the EPA that collects data on the generation and management of hazardous waste. BRS captures detailed data from two groups: Large Quantity Generators (LQG) and Treatment, Storage, and Disposal Facilities.

Date of Government Version: 12/31/99
Database Release Frequency: Biennially

Date of Last EDR Contact: 06/16/03
Date of Next Scheduled EDR Contact: 09/15/03

CONSENT: Superfund (CERCLA) Consent Decrees

Source: EPA Regional Offices
Telephone: Varies
Major legal settlements that establish responsibility and standards for cleanup at NPL (Superfund) sites. Released periodically by United States District Courts after settlement by parties to litigation matters.

Date of Government Version: N/A
Database Release Frequency: Varies

Date of Last EDR Contact: N/A
Date of Next Scheduled EDR Contact: N/A

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

ROD: Records Of Decision

Source: EPA

Telephone: 703-416-0223

Record of Decision. ROD documents mandate a permanent remedy at an NPL (Superfund) site containing technical and health information to aid in the cleanup.

Date of Government Version: 07/09/03

Database Release Frequency: Annually

Date of Last EDR Contact: 07/07/03

US BROWNFIELDS: A Listing of Brownfields Sites

Source: Environmental Protection Agency
Telephone: 202-566-2777

Included in the listing are brownfields properties addresses by Cooperative Agreement Recipients and brownfields properties addressed by Targeted Brownfields Assessments. Targeted Brownfields Assessments-EPA's Targeted Brownfields Assessments (TBA) program is designed to help states, tribes, and municipalities--especially those without EPA Brownfields Assessment Demonstration Pilots--minimize the uncertainties of contamination often associated with brownfields. Under the TBA program, EPA provides funding and/or technical assistance for environmental assessments at brownfields sites throughout the country. Targeted Brownfields Assessments supplement and work with other efforts under EPA's Brownfields Initiative to promote cleanup and redevelopment of brownfields. Cooperative Agreement Recipients-States, political subdivisions, territories, and Indian tribes become BCRLF cooperative agreement recipients when they enter into BCRLF cooperative agreements with the U.S. EPA. EPA selects BCRLF cooperative agreement recipients based on a proposal and application process. BCRLF cooperative agreement recipients must use EPA funds provided through BCRLF cooperative agreement for specified brownfields-related cleanup activities.

Date of Government Version: 07/15/03

Date of Last EDR Contact: 09/15/03
Date of Next Scheduled EDR Contact: 12/15/03

RAATS: RCRA Administrative Action Tracking System

Source: EPA
Telephone: 202-564-4104

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

Date of Government Version: 04/17/95
Database Release Frequency: No Update Planned

SSTS: Section 7 Tracking Systems

Source: EPA

Telephone: 202-564-5008

Section 7 of the Federal Insecticide, Fungicide and Rodenticide Act, as amended (92 Stat. 829) requires all registered pesticide-producing establishments to submit a report to the Environmental Protection Agency by March 1st each year. Each establishment must report the types and amounts of pesticides, active ingredients and devices being produced, and those having been produced and sold or distributed in the past year.

STATE OF NEW HAMPSHIRE ASTM STANDARD RECORDS

SHWS: Listing of All Sites

Source: Department of Environmental Services

Telephone: 603-271-2919

State Hazardous Waste Sites. State hazardous waste site records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. Available information varies by state.

Date of Government Version: 06/11/03

Date Made Active at EDR: 07/01/03

Database Release Frequency: Quarterly

Date of Data Arrival at EDR: 06/23/03

Elapsed ASTM days: 8

US BROWNFIELDS: A Listing of Brownfields Sites

Source: Environmental Protection Agency
Telephone: 202-566-2777

Included in the listing are brownfields properties addresses by Cooperative Agreement Recipients and brownfields properties addressed by Targeted Brownfields Assessments. Targeted Brownfields Assessments-EPA's Targeted Brownfields Assessments (TBA) program is designed to help states, tribes, and municipalities--especially those without EPA Brownfields Assessment Demonstration Pilots--minimize the uncertainties of contamination often associated with brownfields. Under the TBA program, EPA provides funding and/or technical assistance for environmental assessments at brownfields sites throughout the country. Targeted Brownfields Assessments supplement and work with other efforts under EPA's Brownfields Initiative to promote cleanup and redevelopment of brownfields. Cooperative Agreement Recipients-States, political subdivisions, territories, and Indian tribes become BCRLF cooperative agreement recipients when they enter into BCRLF cooperative agreements with the U.S. EPA. EPA selects BCRLF cooperative agreement recipients based on a proposal and application process. BCRLF cooperative agreement recipients must use EPA funds provided through BCRLF cooperative agreement for specified brownfields-related cleanup activities.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Oil/Gas Pipelines: This data was obtained by EDR from the USGS in 1994. It is referred to by USGS as GeoData Digital Line Graphs from 1:100,000-Scale Maps. It was extracted from the transportation category including some oil, but primarily gas pipelines.

Electric Power Transmission Line Data

Source: PennWell Corporation
Telephone: (800) 823-6277

This map includes information copyrighted by PennWell Corporation. This information is provided on a best effort basis and PennWell Corporation does not guarantee its accuracy nor warrant its fitness for any particular purpose. Such information has been reprinted with the permission of PennWell.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Source: American Hospital Association, Inc.
Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000

A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes

Source: National Institutes of Health
Telephone: 301-594-6248

Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools

Source: National Center for Education Statistics
Telephone: 202-502-7300

The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools

Source: National Center for Education Statistics
Telephone: 202-502-7300

The National Center for Education Statistics' primary database on private school locations in the United States.

Daycare Centers: Child Care Facility List

Source: Department of Health & Human Services
Telephone: 603-271-4624

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 1999 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 from the U.S. Fish and Wildlife Service.

GEOCHECK® - PHYSICAL SETTING SOURCE ADDENDUM

TARGET PROPERTY ADDRESS

NEW ENGLAND YARD
MESSER STREET
LACONIA, NH 03246

TARGET PROPERTY COORDINATES

Latitude (North):	43.536900 - 43° 32' 12.8"
Longitude (West):	71.468002 - 71° 28' 4.8"
Universal Transverse Mercator:	Zone 19
UTM X (Meters):	300588.8
UTM Y (Meters):	4823183.0
Elevation:	500 ft. above sea level

EDR's GeoCheck Physical Setting Source Addendum has been developed to assist the environmental professional with the collection of physical setting source information in accordance with ASTM 1527-00, Section 7.2.3. Section 7.2.3 requires that a current USGS 7.5 Minute Topographic Map (or equivalent, such as the USGS Digital Elevation Model) be reviewed. It also requires that one or more additional physical setting sources be sought when (1) conditions have been identified in which hazardous substances or petroleum products are likely to migrate to or from the property, and (2) more information than is provided in the current USGS 7.5 Minute Topographic Map (or equivalent) is generally obtained, pursuant to local good commercial or customary practice, to assess the impact of migration of recognized environmental conditions in connection with the property. Such additional physical setting sources generally include information about the topographic, hydrologic, hydrogeologic, and geologic characteristics of a site, and wells in the area.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata. EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

USGS Topographic Map: 2443071-E4 LACONIA, NH
General Topographic Gradient: General West
Source: USGS 7.5 min quad index

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

<u>Target Property County</u> BELKNAP, NH	<u>FEMA Flood Electronic Data</u> Not Available
--	--

Flood Plain Panel at Target Property: Not Reported

Additional Panels in search area: Not Reported

NATIONAL WETLAND INVENTORY

<u>NWI Quad at Target Property</u> LACONIA	<u>NWI Electronic Data Coverage</u> YES - refer to the Overview Map and Detail Map
---	---

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

<u>MAP ID</u>	<u>LOCATION FROM TP</u>	<u>GENERAL DIRECTION GROUNDWATER FLOW</u>
Not Reported		

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era: Paleozoic
System: Devonian
Series: Devonian
Code: De (decoded above as Era, System & Series)

GEOLOGIC AGE IDENTIFICATION

Category: Eugeosynclinal Deposits

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: COLTON

Soil Surface Texture: gravelly - sandy loam

Hydrologic Group: Class A - High infiltration rates. Soils are deep, well drained to excessively drained sands and gravels.

Soil Drainage Class: Excessively. Soils have very high and high hydraulic conductivity and low water holding capacity. Depth to water table is more than 6 feet.

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: LOW

Depth to Bedrock Min: > 60 inches

Depth to Bedrock Max: > 60 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Permeability Rate (in/hr)	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	8 inches	gravelly - sandy loam	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 20.00 Min: 6.00	Max: 6.00 Min: 3.60
2	8 inches	9 inches	gravelly - coarse sandy loam	Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand.	COARSE-GRAINED SOILS, Gravels, Gravels with fines, Silty Gravel	Max: 20.00 Min: 6.00	Max: 6.00 Min: 3.60
3	9 inches	22 inches	gravelly - loamy fine sand	Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 20.00 Min: 6.00	Max: 6.00 Min: 3.60
4	22 inches	72 inches	very gravelly - loamy sand	Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand.	COARSE-GRAINED SOILS, Gravels, Clean gravels, Poorly Graded Gravel.	Max: 20.00 Min: 20.00	Max: 6.50 Min: 4.50

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinator soil types may appear within the general area of target property.

Soil Surface Textures: loamy sand
 very stony - fine sandy loam
 silt loam
 mucky-peat
 fine sandy loam
 muck
 unweathered bedrock

Surficial Soil Types: loamy sand,
 very stony - fine sandy loam
 silt loam
 mucky-peat
 fine sandy loam

 fine sandy loam
 unweathered bedrock

ADDITIONAL ENVIRONMENTAL RECORD SOURCES

According to ASTM E 1527-00, Section 7.2.2, "one or more additional state or local sources of environmental records may be checked, in the discretion of the environmental professional, to enhance and supplement federal and state sources... Factors to consider in determining which local or additional state records, if any, should be checked include (1) whether they are reasonably ascertainable, (2) whether they are sufficiently useful, accurate, and complete in light of the objective of the records review (see 7.1.1), and (3) whether they are obtained, pursuant to local, good commercial or customary practice." One of the record sources listed in Section 7.2.2 is water well information. Water well information can be used to assist the environmental professional in assessing sources that may impact groundwater flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002. 7.5-Minute DEMs correspond to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps.

HYDROLOGIC INFORMATION

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 1999 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 from the U.S. Fish and Wildlife Service.

HYDROGEOLOGIC INFORMATION

AQUIFLOW^R Information System

Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Services
The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the national Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

ADDITIONAL ENVIRONMENTAL RECORD SOURCES

FEDERAL WATER WELLS

PWS: Public Water Systems

Source: EPA/Office of Drinking Water
Telephone: 202-564-3750

Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data

Source: EPA/Office of Drinking Water
Telephone: 202-564-3750

Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)

This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

Telephone: 603-271-3503

RADON

Area Radon Information

Source: USGS

Telephone: 703-356-4020

The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones

Source: EPA

Telephone: 703-356-4020

Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

EDR PUR-IQ[®] Report

"the intelligent way to conduct historical research"

for
New England Yard
Messer Street
Laconia, NH 03246
Lat./Long. 43.53690 / 71.46800
EDR Inquiry # 1050284.2s

The EDR PUR-IQ report facilitates historical research planning required to complete the Phase I ESA process. The report identifies the *likelihood* of prior use coverage by searching EDR's proprietary historical source(s) database comprising nationwide information on: city directories, fire insurance maps, aerial photographs, historical topographic maps, flood maps and National Wetland Inventory maps.

Potential for EDR Historical (Prior Use) Coverage - Coverage in the following historical information sources may be used as a guide to develop your historical research strategy:

1. **City Directory:** Coverage exists for LACONIA for 1936-1999
2. **Fire Insurance Map:** When you order online any ASTM 2000 Package, or an EDR Radius Map with a Sanborn Map Search/Print, you receive site specific Sanborn Map coverage information at no charge.
3. **Aerial Photograph:** Aerial photography coverage may exist for portions of Belknap County. Please contact your EDR Account Executive for information about USGS photos available through EDR.
4. **Topographic Map:** The USGS 7.5 min. quad topo sheet(s) associated with this site:

Historical:	Coverage exists for Belknap County
Current:	Target Property: 2443071-E4 Laconia, NH

EDR's network of professional researchers, located throughout the United States, accesses the most extensive national collections of city directory, fire insurance maps, aerial photographs and historical topographic map resources available for Laconia, NH. These collections may be located in multiple libraries throughout the country. To ensure maximum coverage, EDR will often assign researchers at these multiple locations on your behalf. Please call or fax your EDR representative to authorize a search.

Notice of Disclaimer

Due to the limitations, constraints, inaccuracies and incompleteness of government information and computer mapping data currently available to FirstSearch Technology Corp., certain conventions have been utilized in preparing the locations of all federal, state and local agency sites residing in FirstSearch Technology Corp.'s databases. All EPA NPL and state landfill sites are depicted by a rectangle approximating their location and size. The boundaries of the rectangles represent the eastern and western most longitudes; the northern and southern most latitudes. As such, the mapped areas may exceed the actual areas and do not represent the actual boundaries of these properties. All other sites are depicted by a point representing their approximate address location and make no attempt to represent the actual areas of the associated property. Actual boundaries and locations of individual properties can be found in the files residing at the agency responsible for such information.

Waiver of Liability

Although FirstSearch Technology Corp. uses its best efforts to research the actual location of each site, FirstSearch Technology Corp. does not and can not warrant the accuracy of these sites with regard to exact location and size. All authorized users of FirstSearch Technology Corp.'s services proceeding are signifying an understanding of FirstSearch Technology Corp.'s searching and mapping conventions, and agree to waive any and all liability claims associated with search and map results showing incomplete and or inaccurate site locations.

GLOSSARY OF TERMS

“No Listing/Not Listed” - address not listed in the directory

“Vacant” or “No Current Listing” - status of address in directory

“Residential Listing” - one residential listing located at address

“Multiple Residential Listings” - more than one residential listing located at address

“Multiple Retail Listings” - more than one retail facility located at address

“Multiple Business Listings” - more than one business listing at address

“Multiple Government Offices” - more than one federal listing at an address

“Multiple Municipal Listings” - more than one municipal listing at an address

“Multiple Military Listings” - more than one military listing at an address

“Street Not Listed” - street not listed in directory

When multiple tenants/facilities are observed for one address, the information may be summarized as shown in the following examples:

- An apartment building will be represented by “Multiple Residential Listings”
- A retail shopping center will be represented by “Multiple Retail Listings” followed by a separate listing of sites, if present, which may contain the use of regulated/chemical/hazardous materials such as dry cleaners, photo finishers, hair salons, auto repair shops, etc.
- An office building consisting of attorneys, insurance, firms, or other facilities which do not indicate the use of regulated/chemical/hazardous materials will be represented by “Multiple Business Listings”

Residential addresses, including individual houses and apartment buildings, are listed as residential. Names of tenants can be provided if needed.

Unless otherwise noted, the subject address(es) plus four adjacent addresses up from the subject property and four addresses down from the subject property are included in the report, if available.

Although great care has been taken by FirstSearch Technology Corporation in compiling and verifying the information contained in this report to insure that it is accurate, FirstSearch Technology Corporation disclaims any and all liability for any errors, omissions, or inaccuracies in such information and data.
