**Subject: Phase I Environmental Site Assessment
R & D Paving
81 Memorial Street, Franklin, New Hampshire**

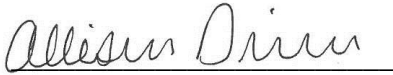

Dear Mr. Lewis and Mr. Hayes:

Enclosed is a copy of the Phase I Environmental Site Assessment (ESA) completed for the above referenced property (the Site). This Phase I ESA was completed in accordance with ASTM International (ASTM) Standard Practice E 1527-13 and the Environmental Protection Agency (EPA) Standards and Practices for All Appropriate Inquiries (AAI); Final Rule (40 CFR Part 312) for Phase I ESAs. The following recognized environmental conditions (RECs) were identified:

- REC #1 – Historical USTs at the Site and immediately upgradient of the Site
- REC #2 – Historical use of the Site as a garage with an earthen floor
- REC #3 – Historical use of the upgradient 31 to 33 Memorial Street property

Please do not hesitate to contact me at (207) 828-1272 ext. 15 if you have any questions.

Sincerely,
CREDERE ASSOCIATES, LLC

Allison Drouin

EXECUTIVE SUMMARY

Credero Associates, LLC (Credero) has performed a Phase I Environmental Site Assessment (ESA) of R & D Paving located at 81 Memorial Street in the City of Franklin, Merrimack County, New Hampshire (the Site). This Phase I ESA was completed in conformance with the ASTM International (ASTM) Standard Practice E 1527-13 for Phase I ESAs, which meets the requirements of the U.S. Environmental Protection Agency (EPA) Standards and Practices for All Appropriate Inquiries (AAI); Final Rule (40 CFR Part 312).

Credero was retained by Lakes Region Planning Commission (LRPC) on behalf of the City of Franklin to prepare this Phase I ESA for the purpose of identifying recognized environmental conditions (RECs) as defined by the ASTM E 1527-13 standard that may impact the Site's environmental condition.

The 0.242-acre Site is part of the Franklin Falls Historic District and consists of a single-story slab on grade garage building with three garage bays and an office. The garage bays have been partitioned into two areas that are used for material, equipment, and drum storage, and vehicle maintenance or parking. The remainder of the Site is paved with asphalt and paving equipment is stored along the eastern side of the Site building.

The Site was developed as early as 1884 with a lumber yard for storage of cord wood. By 1892, the Site was occupied by portions of the F. F. Company (possibly Franklin Falls Power and Light Company). By 1911, the Site was developed with a two-story structure occupied by a wheel wright, painter, and black smith shop, and by a garage from at least 1923 through 1929. Between 1948 and 1986, the southern end of the Site was occupied by a three truck garage that was part of the adjacent grocer building. The current Site building was constructed between 1948 and 1956. The 1964 Sanborn map indicates the building was originally a private garage with an earthen floor. By 1986, the truck garage on the southern portion of the Site was removed, and Site conditions remain relatively unchanged from that time through to the present. According to historical records, the Site had a gas tank in 1923, and a second gas tank was located near the southern property boundary in 1948. It is unknown if these gas tanks were ever physically removed.

The surrounding area was occupied by a lumber yard as early as 1884 and by the F. F. Company as early as 1892. Beginning in at least 1897, the surrounding area to the southeast was occupied by the Shepard Wholesale Grocer. A steam laundry shop was located at 31 to 33 Memorial Street, south and upgradient of the Site from at least 1897 through at least 1967. The adjoining property west of the Site was developed with the Acme Knitting Machine and Needle Company by 1911. By 1986, the adjoining Shepard Grocery building and associated truck garage were removed. Kar Z Karma Motors was located at the 31 to 33 Memorial Street property from 2003 through 2008.

Based on review of historical sources, environmental databases, interviews, User provided information, Site reconnaissance, and judgment by the Environmental Professional, the following RECs were identified:

- REC #1 – Historical USTs at the Site and immediately upgradient of the Site
- REC #2 – Possible release of petroleum during historical use of the Site as a garage with an earthen floor
- REC #3 – Historical use of the upgradient 31 to 33 Memorial Street property

The following was identified as *de minimis* condition (DMC), which is defined as an environmental concern that generally does not present a threat to human health or the environment and generally would not be the subject of an enforcement action if brought to the attention of regulatory agencies:

- DMC #1 – Drum storage area within the Site building

Additionally, the following environmental findings, which do not meet the definition of a REC, historic REC (HREC), controlled REC (CREC), or *de minimis* condition (DMC); however, warrant the opinion of an Environmental Professional, were identified:

- Environmental Finding #1 – Possible hazardous building materials throughout the Site
- Environmental Finding #2 – Current use of the Site by a paving company

Based on the RECs, DMC, and environmental findings identified during this Phase I ESA, Credere recommends the following:

- A GPR survey to locate possible historical USTs that may be present at the Site
- A Phase II subsurface investigation to confirm or dismiss the RECs and environmental findings identified in this Phase I ESA
- A HBMS to assess the presence of hazardous building materials and/or universal wastes throughout the Site

1. INTRODUCTION

Crede Associates, LLC (Crede) has been retained by the Lakes Region Planning Commission (LRPC, the Client) on behalf of the City of Franklin (the User), to perform a Phase I Environmental Site Assessment (ESA) for R & D Paving located at 81 Memorial Street in the City of Franklin, Merrimack County, New Hampshire, (the Site) to identify recognized environmental conditions (RECs)¹. This Phase I ESA was completed in conformance with the ASTM International (ASTM) Standard Practice E 1527-13 for Phase I ESAs, which meets the requirements of the U.S. Environmental Protection Agency (EPA) Standards and Practices for All Appropriate Inquiries (AAI); Final Rule (40 CFR Part 312). Crede staff's qualifications to perform this Phase I ESA are provided in **Appendix A**.

Appendix B contains a detailed description of Crede's Scope of Work for Phase I ESAs, which can be divided into the following broad categories: Records Review; Site Reconnaissance; Interviews; and Reporting. However, the following report is subdivided further so that it generally conforms to the recommended report format provided in ASTM Practice E 1527-13. Additionally, this Phase I ESA was completed according to Crede's June 2, 2014, contract to perform Brownfields assessment work for LRPC.

1.1 LIMITING CONDITIONS AND DEVIATIONS

According to Chapter 12.10 of ASTM E 1527-13, all limiting conditions and deviations from this practice shall be listed individually in detail. This includes any client-imposed constraints.

No client imposed limitations or deviations were encountered during this Phase I ESA. Limitations or deviations relating to completion of the Site reconnaissance, if any, are provided in **Section 6.2**.

1.2 ASTM NON-SCOPE CONSIDERATIONS

The following is a partial list of items excluded from the scope of a Phase I ESA completed under ASTM E 1527-13:

- Asbestos-containing materials (ACMs)
- Endangered species
- Radon
- Regulatory compliance
- Indoor air quality unrelated to RECs identified herein
- Wetlands
- Lead-based paint (LBP)
- Lead in drinking water
- Mold
- Polychlorinated biphenyl (PCB)-containing materials (other than electric or hydraulic equipment)

¹ A *Recognized Environmental Condition* - the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to the release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. *De minimis* conditions are not recognized environmental conditions.

However, there may be environmental issues or conditions at a property that parties may wish to assess in connection with commercial real estate that are outside the scope of this practice. The following is a list of additional items considered during this Phase I ESA:

- ACMs
- LBP
- PCB-containing building materials and equipment excluded by the ASTM standard
- Radon

These non-scope considerations are discussed in **Section 8**.

1.3 UNCERTAINTY AND COMPLETENESS

No Phase I ESA can wholly eliminate uncertainty regarding the potential for RECs in connection with a Site. Performance of this practice is intended to reduce, but not eliminate, uncertainty regarding the potential for RECs in connection with the Site, and this practice recognizes reasonable limits of time and cost. To the extent possible, this Phase I ESA presents a concise summary that qualitatively identifies potential environmental liability and provides Credere's professional opinions relative to the identified RECs (if any) so that informed business decisions may be made regarding the Site.

If the findings from this Phase I ESA indicate or reasonably imply that environmentally regulated materials are affecting the Site, then the need for additional testing to evaluate the scope, location, source, and nature of any release or threat of release is included as a recommendation. In contrast, the Phase I ESA may also conclude that the likelihood of environmental problems is not significant and that there is no evidence of RECs in connection with the Site. The benefit of the completed Phase I ESA is that a new owner would be eligible for the *bona fide* prospective purchaser liability protection under Comprehensive Environmental Response, Compensation and Liability Act (CERCLA).

1.4 WARRANTY DISCLAIMER

This report has been prepared as part of an agreement between Credere and the Client. This agreement was established in order to provide the Client with information upon which it can rely concerning the existence or likely existence of various environmental contaminants on or adjacent to the Site.

The report does not provide sufficient information to unequivocally determine that no hazardous waste contamination is present at the Site. Additional work beyond that completed for this study would be necessary to provide such information. Further, this report is not an audit for regulatory compliance or a detailed condition survey for the presence of asbestos, LBP, PCBs, radon, or any other pollutant specific compound.

Our conclusions regarding the Site are based on Credere's interpretation of the Site's historical land use and on observations of the existing Site conditions during our Site reconnaissance. The results of this study must be qualified in that no borings, soil or groundwater sampling, or

chemical testing was conducted as part of this study. Therefore, our conclusions regarding the condition of the Site do not represent a warranty that the Site, adjacent properties, etc., are of the same quality as may be inferred from observable property conditions and readily available property historical files.

1.5 SIGNIFICANT ASSUMPTIONS

Crederre relied upon the sources identified in the **Appendix B** Scope of Work to complete this Phase I ESA. We assume these sources to be true and information provided to Crederre has not been falsified or altered in anyway. No conflicting information was encountered (unless otherwise specified herein) and the validity of the sources was not questioned.

For purposes of assessing potential environmental impacts from offsite sources, groundwater in the area was inferred to flow generally to the north towards the Winnepesaukee River. However, due to the oxbow path of the river, groundwater at the adjoining property to the southwest and west likely flows southwest as documented by prior investigations at the property. Therefore, review of nearby property records will focus primarily on the Site and upstream properties to the east, southeast, and south as they are considered hydraulically upgradient of the Site.

1.6 SPECIAL TERMS AND CONDITIONS

No special terms or conditions were imposed upon the scope of work of this Phase I ESA.

2. USER PROVIDED INFORMATION

In accordance with ASTM E 1527-13 Chapter 6, the User of this report was interviewed concerning their responsibilities. The following subsections summarize User provided information to demonstrate they met their responsibilities.

Mr. Dick Lewis, Planning Director with the City of Franklin, was identified as the User. A copy of the User Questionnaire provided by Mr. Lewis is included in **Appendix C**.

2.1 REASON FOR PERFORMING PHASE I ESA

The User indicated this Phase I ESA was requested to identify RECs in connection with the property and as part of the environmental due diligence to obtain CERCLA liability protection. The User intends to acquire the property and use it for storage in the short term. Long term plans for the Site have not been finalized; however, they include a City parking lot or regional bus hub.

2.2 SPECIALIZED KNOWLEDGE

The User reported they have no specialized knowledge as it relates to the Site.

2.3 COMMONLY KNOWN OR REASONABLY ASCERTAINABLE INFORMATION

The User indicated the Site was used most recently by R & D Paving as an office, storage space, and garage. Prior to R & D Paving's occupation of the Site, the Site was used as an auto repair garage.

2.4 TITLE RECORDS

A chain-of-title search was not conducted by the User prior to the completion of this Phase I ESA. Available historical ownership records as reviewed by Credere are summarized in **Section 5.2**.

2.5 ENVIRONMENTAL LIENS OR ACTIVITY USE LIMITATIONS

A third party, such as a state or federal governmental agency, may place environmental liens on a property in order to recover clean-up costs that were incurred by the party. The existence of a recorded environmental clean-up lien on a property is an indication environmental conditions either currently exist or previously existed on a property. Activity or land use limitation (AUL) for a property may be placed on the property's deed to prevent exposure to hazardous or contaminated materials. The existence of an environmental clean-up lien or AULs could be considered an indicator of potential environmental concerns, and could be a basis for additional environmental investigations on a property to determine the potential existence of ongoing or continued releases of hazardous substances or petroleum products.

An environmental lien search was not conducted by the User prior to the completion of this Phase I ESA; however, Credere identified no environmental liens or AULs in the ownership or regulatory records reviewed for the Site.

2.6 REDUCTION OF VALUATION FOR ENVIRONMENTAL ISSUES

The User reported, to the best of their knowledge, the purchase price of the Site reflects fair market value and has not been reduced for environmental issues.

3. SITE DESCRIPTION

3.1 SITE LOCATION AND LEGAL DESCRIPTION

Parcel Identification:	Map 117, Lot 261
Site Owner(s):	R & D Paving, Incorporated
Site Occupants:	R & D Paving, Incorporated
Site Location:	81 Memorial Street, Franklin, New Hampshire
Zoning:	B-2 – High density business district
County:	Merrimack County
USGS 7.5 Minute Quadrangle:	Franklin, New Hampshire, 7.5 Minute Quadrangle
Latitude and Longitude:	43.4459000° Lat., -71.6478000° Long.

Copies of the City of Franklin tax assessment card and tax map are included with the other supporting documentation in **Appendix G**.

3.2 SITE DESCRIPTION AND OPERATIONS

The 0.242-acre Site is part of the Franklin Falls Historic District and consists of a single-story slab on grade garage building with three garage bays and an office. The garage bays have been partitioned into two areas (one single bay area and one double bay area) that are used for material, equipment, and drum storage, and vehicle maintenance or parking, respectively. The remainder of the Site is asphalt paved, and paving equipment is stored along the eastern side of the Site building.

A Site Location Plan has been provided as **Figure 1**, and **Figure 2** depicts pertinent Site features.

3.3 SITE UTILITIES

The Site building is heated using propane contained in two cylinders located outside the northern end of the Site building. The current owner was not aware if the Site building had ever been heated using oil.

Electricity is available to the Site from Public Service of New Hampshire (PSNH). Public water and sewer from the City of Franklin is provided to the Site from Memorial Street.

3.4 PHYSICAL SETTING

Topography

Based on Credere's observations and the United States Geological Survey (USGS) Topographic Map of the Franklin Quadrangle, New Hampshire, topography at the Site is generally flat to gently sloping to the north; however, the area immediately around the building is graded such

that stormwater flows away from the building. The Site elevation is approximately 300 feet above mean sea level. An excerpt from this map has been included as **Figure 1**.

Geology

Surficial Geology

According to the physical Setting Source Summary in the Environmental Database Report (EDR), which is derived from the US Department of Agriculture's Soil Conservation Service National Cooperative Survey, Site soils are mapped as Paxton soils, which typically consist of well drained very stony fine sandy loam with slow infiltration rates.

Bedrock Geology

According to the Bedrock Geologic Map of New Hampshire, bedrock beneath the Site consists of Lower Silurian meta-argillite, meta-conglomerate, and calc-silicate rocks of the lower part of the Ranglely Formation. Rocks were formed by metamorphosis of sedimentary deposits in the Central Maine Composite Terrane (Central Maine Trough) and igneous intrusive rocks. No bedrock outcrops were observed during Credere's Site reconnaissance.

Hydrology

The nearest surface water body to the Site is the Winnepesaukee River, which is located approximately 150-feet north of the Site. The Winnepesaukee River flows west and joins the Pemigewasset River approximately 0.6-miles south of the Site. Storm drains were observed along Memorial Street, which likely accept runoff from the entirely impermeable Site.

For purposes of assessing potential environmental impacts from offsite sources, groundwater in the area was inferred to flow generally to the north towards the Winnepesaukee River. However, due to the oxbow path of the river, groundwater at the adjoining property to the southwest and west likely flows southwest as documented by prior investigations at the property. Therefore, review of nearby property records will focus primarily on the Site and upstream properties to the east, southeast, and south as they are considered hydraulically upgradient of the Site.

4. PRIOR ENVIRONMENTAL DOCUMENTS

No prior environmental reports were identified during preparation of this Phase I ESA.

5. RECORDS REVIEW

Files at the City of Franklin Office and online in the NHDES OneStop database were reviewed to obtain information concerning incidents involving releases of petroleum and/or hazardous substances at and in the vicinity of the Site. In addition, Credere contracted EDR of Shelton, Connecticut, to conduct a database search for the Site and surrounding area in accordance with ASTM's approximate minimum search distance guidelines to identify potential environmental impacts that could affect the Site. The purpose of these searches is to identify potential RECs in connection with the Site. However, this research should not be considered inclusive of all regulatory records, but only those records that were readily available and practically reviewable.

EDR's report is included as **Appendix E**, and additional supporting documentation has been included in **Appendix G**.

5.1 HISTORICAL RECORDS

The ASTM standard for Phase I ESAs requires historical records are searched for information on the Site dating back to the Site's earliest development or 1940, whichever is earliest based on available documentation. Historical sources, as defined by ASTM E 1527-13, reviewed as part of this Phase I ESA to ascertain the earliest development and historical use of the Site include: USGS topographic maps, Sanborn[®] Fire Insurance Maps (Sanborns), aerial photographs, city directories, and historical atlases were reviewed.

Site History Summary

The Site

The Site was developed as early as 1884 as a lumber yard for storage of cord wood. By 1892, the Site was occupied by portions of the F. F. Company (possibly Franklin Falls Power and Light Company). By 1911, the Site was developed with a two-story structure occupied by a wheelwright, painter, and black smith shop, and by a garage from at least 1923 through 1929. Between 1948 and 1986, the southern end of the Site was occupied by a three bay truck garage that was part of the adjacent grocer building. The current Site building was constructed between 1948 and 1956. The 1964 Sanborn map indicates the building was originally a private garage with an earthen floor. By 1986, the truck garage on the southern portion of the Site was removed, and Site conditions remain relatively unchanged from that time through to the present.

According to Sanborn maps, the Site had a gas tank in 1923, and a second gas tank was located near the southern property boundary in 1948 (see **Figure 2**). It is unknown if these gas tanks were ever physically removed.

Surrounding Area

The surrounding area was occupied by a lumber yard as early as 1884 and by the F. F. Company as early as 1892. Beginning in at least 1897, the surrounding area to the southeast was occupied by the Shepard Wholesale Grocer. A steam laundry shop was located at 31 to 33 Memorial Street, south and upgradient of the Site from at least 1897 through at least 1967. The adjoining

property west of the Site was developed with the Acme Knitting Machine and Needle Company by 1911. By 1986, the adjoining Shepard Grocery building and associated truck garage were removed. Kar Z Karma Motors was located at the 31 to 33 Memorial Street property from 2003 through 2008.

The following table provides a summary of historical resources reviewed for this Phase I ESA:

Year/Historical Source	Significant Land Use	Environmental Concern
1884/Sanborn Map	The Site was developed as early as 1884 as a lumber yard. Cord wood storage areas are depicted.	None
1892/Franklin Falls Atlas	Canal Street was depicted as Yellow Row in 1892, and the Site may have been occupied by a portion of the F. F. Company.	
1897/Sanborn Map	By 1897, the Site was mostly vacant with the exception of a stable associated with the adjoining residential structure to the south, and a storage shed was located near the northeast corner of the Site. A whole grocer was depicted to the southeast of the Site, and a steam laundry shop was located south of the Site.	Steam laundry upgradient of the Site
1911/Sanborn Map	By 1911, a two story building was present at the Site and was occupied by a wheel wright, painter, and black smith. The adjoining area to the east-southeast was occupied by the Shepard Brothers Wholesale Grocer. The steam laundry facility was still depicted south of the Site.	
1923/Sanborn Map	By 1923, the Site building was occupied by a garage and a gas tank is located in the southwest portion of the Site.	Historical gas tank at the Site
1927/Topographic Map		
1929/Sanborn Map		
1948/Sanborn Map	By 1948, the previous Site building was removed and the southern edge of the Site was straddled by a three bay truck garage attached to the adjoining Shepard Grocery building. A second gas tank was located just south of the Site associated with the truck garage.	Upgradient gas tank
1956/Aerial Photograph	By 1956, the current Site building was constructed north of the former truck garage and was depicted as having an earthen floor on the 1964 Sanborn Map. The upgradient gas tank was removed from the Sanborn map; however, it is unknown if it was physically removed from the adjoining property. The upgradient laundry facility was present through at least 1967.	Garage with earthen floor, upgradient laundry facility
1956/Topographic Map		
1961/City Directory		
1964/Sanborn Map		
1967/City Directory		
1986/Aerial Photograph	By 1986, the adjoining grocery building and truck garage were removed. Conditions at the Site and in the surrounding area remain relatively unchanged from 1986 through to the present. Kar Z Karma Motors occupied an upgradient property from 2003 through 2008.	Upgradient motor shop
1987/Topographic Map		
1990/City Directory		
1998/Aerial Photograph		
1999/City Directory		
2000/Topographic Map		
2003/City Directory		
2006/Aerial Photograph		
2008/Aerial Photograph		
2008/City Directory		
2009/Aerial Photograph		
2011/Aerial Photograph		
2012/Aerial Photograph		
2013/City Directory		

5.2 OWNERSHIP RECORDS

Ownership records were examined at the City of Franklin Planning Office and online at the Merrimack County Registry of Deeds website. Historical ownership of the Site could be traced back to at least 1978 when the Site was transferred from Franklin Mills, Incorporated to Marina Development, Inc. as part of a larger property. The portion of the larger property that is the Site could not be identified from the property descriptions provided in the deed and further historical ownership could not be traced within the time and cost constraints of this Phase I ESA, nor was it deemed pertinent in identifying RECs for the Site. Ownership prior to Franklin Mills, Inc. is unknown but likely included Shepard Grocery, the K.M.H. Corporation, or Nelson Howard based on their inclusion as grantors in the earliest reviewed deed.

The table below shows the reverse chronology of known ownership history based on available information:

Grantor	Grantee	Date	Book/Page
R & D Paving, Inc.	R & D Paving	December 19, 2003	2608/1344
Franklin Industrial Complex, Inc.	R & D Paving, Inc.	July 13, 1995	1996/0461

5.3 STATE ENVIRONMENTAL REVIEW

Credero received an EDR[®] database search for the Site and surrounding area. The NHDES also maintains an online ‘OneStop’ Environmental Site Information database, which includes information for USTs, aboveground storage tanks (ASTs), solid waste facilities including inactive asbestos disposal sites (ADS), hazardous waste generators, hazardous waste sites and remedial programs, brownfields sites, and remediation and initial response spill sites. Credero cross-referenced database information to confirm the accuracy of the EDR[®] report and used the EDR[®] report as a basis for more in-depth research in the OneStop database. A copy of the EDR[®] report is included in **Appendix E**.

Underground or Aboveground Storage Tanks Listing

According to historical sources, the EDR[®] report and NHDES OneStop database, the following USTs were known to exist or were registered for the Site or adjoining properties:

UST Location/Registration ID	Type of UST	Status	
		Installed	Removed
The Site (unregistered)	Gasoline of unknown size	Prior to 1923	Unknown
Riverbend Mill 100 Memorial Street /199807022	1,000-gallon No. 2 fuel oil	Unknown	1983 ¹
Franklin Business Center 20 Canal Street/115227	20,000-gallon corrosion protected steel with audible alarm	1984	12/18/2012

Bold – indicates the UST is registered to or located on the Site.

¹ – UST abandoned in place.

State Investigation/Remediation, Leaking Underground Storage Tank (LUST), Leaking Aboveground Storage Tank (LAST), Asbestos Disposal Sites (ADS), Initial Response Spill Sites, and Institutional/Engineering Control Sites

The NHDES OneStop online database records and the EDR[®] report include state investigation/remediation sites, LUST sites, LAST sites, ADS, and spill sites in the area surrounding the Site. Credere reviewed the available LUST sites, LAST sites, ADS, and/or spill sites in the EDR report and on the NHDES OneStop online database. Based on this review, the Site is not listed as a state investigation/remediation site, LUST site, LAST site, ADS, or spill site.

EDR identified five LUST, LAST, and/or spill listings within the 0.5-mile approximate minimum search distance from the Site. All five were assessed to be located hydraulically cross gradient, hydraulically disconnected, or of a significant distance from the Site such that contamination would not migrate to the Site.

Five (5) properties within the 1-mile minimum search distance are listed as New Hampshire State Hazardous Waste Sites (NH SHWS), which are the state equivalent of CERCLA sites. All five properties were assessed to be located hydraulically cross gradient, hydraulically disconnected, or of a significant distance from the Site such that contamination would be unlikely to migrate to the Site.

Three (3) properties within the 0.5-mile approximate minimum search distance are listed as state institutional/engineering control properties. Of the three, the following was identified to be in a hydraulic position or proximity to have the potential to impact the Site:

Facility ID	Location Relative to the Site	Summary
NHDES Site #200406004	Riverbend Mill 100 Memorial Street Adjoining west	During an environmental investigation of the adjoining Riverbend Mill, petroleum contamination was identified in soil and groundwater associated with a fuel oil UST that was reportedly closed in place in 1983. Monitoring wells installed at the property indicated groundwater flow was toward the Winnepesaukee River southwest of the property, away from the R & D Paving Site. Groundwater was monitored under a NHDES groundwater management permit through May 2007, an activity and use restriction was filed for the property, and NHDES subsequently issued a Certificate of No Further Action on April 23, 2007. Based on the groundwater flow direction documented at the property and the current regulatory status, the petroleum contamination at the adjoining Riverbend Mill is not expected to have impacted environmental conditions at the Site.

State Brownfields Program

Brownfields sites are defined under the federal Brownfields law, known as the Brownfields Revitalization Act of 2002, as "real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant." The law further defines the term to include a site that is: "contaminated by a controlled substance; contaminated by petroleum or a petroleum product excluded from the definition of 'hazardous substance'; or mine-scarred land."

The NHDES has several Brownfields initiatives including the NH Brownfields Covenant Program, the NH Brownfields Assessment Program, and the NH Brownfields Cleanup Revolving Loan Fund.

Under these three programs, the NHDES maintains lists of active Brownfields sites, closed Brownfields sites, and sites participating in the Brownfields Covenant Program. According to information obtained from the NHDES Brownfields Program website, "active" Brownfields sites are listed in the contaminated sites inventory because they meet the definition of a Brownfields site under the federal Brownfields Revitalization Act of 2002. In addition, some sites included on the active list have entered the program by being assessed through participation in one of the many other EPA-funded Brownfields programs throughout New Hampshire. Sites denoted as "active" are not yet cleaned up to NHDES satisfaction. Closed Brownfields sites are sites listed in the contaminated sites inventory because they have been cleaned up and brought to resolution under the site cleanup program and have participated in one or more NHDES Brownfields initiatives, or generally meet the definition of a Brownfields site. Sites participating in the Brownfields Covenant program are seeking covenants "not-to-sue" from the State of New Hampshire.

According to the NHDES lists of Brownfields sites and the EDR[®] report, the Site is not listed as a Brownfields site. One Brownfield site is listed in the EDR report as located within the 0.5-mile approximate minimum search distance from the Site; however, it is located downstream and across the Winnepesaukee River and is considered hydraulically disconnected from the Site. A small portion of the adjoining Franklin Business Center property located at 20 Canal is also known to be a brownfields site. The Franklin Business Center was investigated in 2012 due to the presence of a 20,000-gallon fuel oil UST, which was found to be intact upon removal. However, during the UST removal, a release associated with a historical AST was identified, and the release is currently being investigation with oversight by the NHDES.

Solid Waste Facilities

According to the NHDES OneStop database, the Site is not listed as a solid waste facility. No solid waste facilities are located within the 0.5-mile approximate minimum search distance of the Site.

5.4 FEDERAL ENVIRONMENTAL REVIEW

The EPA maintains a number of databases that track properties and facilities which are regulated under CERCLA, the Resource Conservation and Recovery Act (RCRA), the Emergency Response Notification System (ERNS), the Federal Institutional Control/Engineering Control (IC/EC) database, and received EPA Brownfields funding.

CERCLA Sites

CERCLA is a federally established program that created a fund to identify hazardous waste properties for remediation. The fund is known as Superfund. The Comprehensive Environmental Response, Compensation, and Liability Information System (CERCLIS) list is a compilation of known and/or suspected uncontrolled or abandoned hazardous waste properties that are eligible for funding under Superfund. The Superfund program includes Federal Facilities, short- and long-term clean-up properties, National Priority Listing (NPL) properties, delisted NPL properties, Sites Awaiting NPL Decisions (SAND), and No Further Response Action Planned (NFRAP) properties. These are defined below:

- Federal Facilities are hazardous waste sites where the Department of Defense (DOD) is the lead agency in the investigation or remediation of a property.
- Hazardous waste properties that do not require a long-term cleanup process are considered short-term cleanups, or "removal actions." Although the cleanup process for these properties may not be as lengthy as for long-term cleanups, these properties may still affect the health and environment of those who live nearby.
- Long-term clean-up properties are often caused by years of polluting and may take several years, even decades, to remediate. The most serious uncontrolled or abandoned hazardous waste properties identified as candidates for long-term cleanup are listed on the NPL.

- The database of delisted NPL properties lists those where no further response is appropriate and the property may be removed from the NPL.
- SAND properties have had initial assessments performed, but a decision regarding NPL designation has not been recorded. SAND properties include those that have been assessed by the Superfund program, are now being addressed under state program authorities, or are in various stages of assessment and cleanup by federal or state agencies.
- The NFRAP list is a database of archive designated CERCLA properties that, to the best of the EPA's knowledge, assessment has been completed and the EPA has determined no further steps will be taken to list that property on the NPL.

According to EPA and the EDR report, the Site is not listed as a federal facility, NPL, SAND, or CERCLA property. No federal facilities, NPL, SAND, or CERCLA properties are listed within the appropriate minimum search distances. One property was listed as a NFRAP; however, this property is located across the Winnepesaukee River and is considered hydraulically disconnected from the Site.

RCRA Sites

Sites listed in the EPA RCRA database are sites that are hazardous waste treatment, storage, and disposal (TSD) facilities, or generate small or large quantities of hazardous wastes [i.e. RCRA-Small Quantity Generator (SQG), RCRA-Large Quantity Generator (LQG), RCRA-Conditionally Exempt Small Quantity Generator (CESQG), and RCRA-non generators (RCRA-Non-Gen)].

Accidents or improper handling at RCRA facilities can result in the release of hazardous waste or hazardous constituents to the environment. The RCRA Corrective Action program (CORRACT) requires these facilities to conduct investigations and cleanup actions as necessary. Facilities under the CORRACTs program need to implement necessary corrective action as part of the process to obtain a permit to treat, store, or dispose of hazardous waste.

According to the EDR report, the Site and adjoining Franklin Business Center property located at 20 Canal Street are listed as RCRA Non-Gen for handling of hazardous waste. The Site was formerly listed as a LQG for generation of ignitable hazardous wastes (D001). No violations were reported in either listing.

No RCRA TSD facilities are located within the 0.5-mile approximate minimum search distance from the Site. No RCRA CORRACT facilities are located within a 1.0-mile approximate minimum search distance of the Site.

ERNS Sites

The ERNS is a database used to store information on notifications of oil discharges and hazardous substances releases. The ERNS program is a cooperative data sharing effort among the EPA Headquarters, the Department of Transportation (DOT) Research and Special Programs

Administration's John A. Volpe National Transportation Systems Center, other DOT program offices, the ten EPA Regions, and the National Response Center (NRC). ERNS data provides comprehensive data compiled on notifications of oil discharges and hazardous substance releases. The ERNS website was redesigned and the data now resides at the NRC. The primary function of the NRC is to serve as the sole national point of contact for reporting oil, chemical, radiological, and biological discharges into the environment anywhere in the United States and its territories.

According to the EDR report, the Site is not listed as an ERNS facility.

5.5 ENVIRONMENTAL LIENS

A third party, such as a state or federal government agency, may place environmental liens on a property in order to recover clean-up costs that were incurred by that third party. The existence of a recorded environmental clean-up lien on a property is an indication environmental conditions either currently exist or previously existed on a property. The existence of an environmental clean-up lien could be considered an indicator of potential environmental concerns and could be a basis for additional environmental investigations on the Site to determine the potential existence of ongoing or continued releases of petroleum products and/or hazardous substances.

The records reviewed by Credere, the EDR report, and interviews conducted as part of this Phase I ESA did not identify any environmental liens for the Site.

5.6 INSTITUTIONAL AND ENGINEERING CONTROLS

Institutional controls or environmental-related covenants for a property are put in place to minimize the potential for human exposure to existing environmental conditions on that property by limiting land or resource use. Types of institutional controls may be referred to as land-use controls, or activity and use limitations, and these controls may be in the form of deed restrictions, zoning restrictions, building or excavation permits, well drilling prohibitions, easements, or covenants. Engineering controls are put in place to prevent access or exposure to contaminated media, or to prevent the migration of contaminated media. Engineering controls typically include, but are not limited to, security features such as fencing, subsurface barriers (e.g. sheet pile or slurry walls), capping or encapsulation systems, or mechanical systems. A property owner wishing to maintain liability protections under state or federal law must comply with any existing land use restrictions and maintain any existing institutional or engineering control employed at the site in connection with a response action.

The local, state, and federal records reviewed and user interviews conducted as part of this Phase I ESA identified no institutional or engineering controls in place on the Site.

5.7 CONSIDERATION OF DATA FAILURE

Data failure is defined as a failure to achieve the historical research objectives of ASTM E 1527-13 after reviewing the standard historical sources that are reasonably ascertainable and likely to be useful dating back to the Site's earliest development or 1940, whichever is earliest.

The date of the Site's earliest development could not be identified from reasonably ascertainable historical sources. Based on the use of the Site and surrounding area in 1884 for expansive storage of wood, it is presumed the Site was undeveloped and relatively level prior to development for wood storage. Therefore, this data failure is not expected to alter the conclusions of this Phase I ESA and is not considered a significant data gap.

6. SITE RECONNAISSANCE

Crederre representatives, Allison Drouin and Judd Newcomb, conducted the Site reconnaissance on July 9, 2014, to obtain information on Site conditions and to identify possible RECs in connection with the Site. Photographs from the Site reconnaissance are provided in **Appendix F**, and references are made to applicable photographs throughout this section. Pertinent Site features are depicted on **Figure 2**.

6.1 METHODOLOGY

The Site reconnaissance was performed by observing interior spaces as they were made accessible. Each room was observed by walking throughout the room and making observations of each room's conditions.

The exterior portion of the Site was observed by walking the Site building perimeters, and the entire property boundary. Adjoining properties were observed during a walk-by reconnaissance.

6.2 SITE RECONNAISSANCE LIMITATIONS

The ASTM Standards for Phase I ESAs require the identification of limitations that were encountered that may affect the ability to identify potential environmental conditions on the Site and to provide an opinion as to the significance of the limitation with regard to the ability to identify potential environmental conditions onsite.

Weather conditions at the time of the Site reconnaissance were approximately 80° Fahrenheit and sunny; Crederre was not limited in their ability to observe Site conditions with regard to the weather or otherwise.

6.3 GENERAL SITE SETTING

Current Use of the Site

The Site is currently used by R & D Paving as an office, for material storage, and as a garage (**Photograph 1**). However, R & D Paving recently built a new facility elsewhere and reportedly plans to vacate the building in September 2014.

Current Uses of Adjoining Properties

The following table summarizes adjoining and surrounding properties and any environmental observation made of these properties:

Distance/Direction	Property Address ⁽¹⁾	Owner/Property Use	Environmental Observations
Adjoining north and east	20 Canal Street (Photographs 2 through 4)	Mass Investment Group, LLC/Franklin Business Center, Staging for R & D Paving	Stockpiling, equipment staging, portable transformers
Adjoining south	42-46 Canal Street	T. Invest. Prop./Residential	None
Adjoining west	100 Memorial Street (Photographs 5 and 6)	Franklin Falls Riverside Lofts, LLC/ Vacant Riverbend Mill	Former industrial building

⁽¹⁾ – adjoining property addresses obtained during Site reconnaissance and from the City of Franklin street index.

6.4 INTERIOR OBSERVATIONS

Credero observed the interior of the Site building for evidence of release or storage of hazardous materials or petroleum products that have the potential to impact the Site.

The northern end of the Site building was occupied by a small office. The remainder of the building consisted of three garage bays that had been partitioned into a single bay for material and drum storage and a two bay garage area. The storage area was relatively clean and no evidence of the use or release of petroleum or hazardous material was noted. The drum storage area (**Photograph 7**) contained at least a dozen 55-gallon drums, multiple five gallon buckets, and the concrete floor was significantly stained (**Photograph 8**). The drums were labeled as waste oil, kettle waste or emulsion, and some drums were unlabeled. Liquid was pooled on the top of some of the drums (**Photograph 9**). Granular sorbent material was observed on the floor adjacent to one of the drums indicating spillage (**Photograph 10**).

The southern two bay garage (**Photographs 11 through 14**) was generally well organized; however, the floor had some staining throughout. An approximately 35-gallon diesel tank was located along the southern wall of the building (**Photograph 13**). The tank was somewhat rusted; however, it appeared intact and was reportedly no longer in use.

Five-gallon buckets and household size containers of lubricants, degreasers, hydraulic oil, motor oil, and other oil and hazardous materials typical of the industry were observed throughout the Site building. Other than the spillage in the drum storage area, the oil and hazardous materials appeared properly stored with no evidence of spills or releases.

Credero did not observe evidence of the following during the interior reconnaissance:

- Strong, pungent, or noxious odors

- Drains or sumps

6.5 EXTERIOR OBSERVATIONS

Crederre observed exterior portions of the Site. The entire exterior portion of the Site was paved with asphalt. Paving equipment was stored along the eastern side of the Site building (**Photograph 15**), and the southern end of the Site was used for parking. Two propane tanks were located outside the northern end of the Site building (**Photograph 16**).

Crederre specifically looked for areas of disturbed pavement to indicate a possible removal of the historical UST; however, no such disturbance was observed.

Crederre did not observe evidence of the following during the exterior reconnaissance:

- Strong, pungent, or noxious odors
- Stained soil or pavement
- Pools of liquid
- Drums or other containers of unidentified substances
- Pits, ponds, or lagoons
- Stressed vegetation
- Solid waste
- Water Wells (drinking water or monitoring wells)

6.6 UNDERGROUND AND ABOVEGROUND STORAGE TANKS

Two historical USTs were depicted on the Sanborn maps; however, no evidence of a current UST was observed at the Site.

Two propane ASTs were located at the northern end of the Site building. No evidence of release was observed associated with these tanks.

6.7 PCB-CONTAINING ELECTRICAL AND HYDRAULIC EQUIPMENT

PCBs were used in products from the 1930s through the early 1980s, but were not distributed in commerce after 1978. PCBs were most commonly used in electrical components, hydraulic oils, and other equipment and lubricants. ASTM Standards for Phase I ESAs only considers PCBs in electrical and hydraulic equipment. Possible PCB-containing fluorescent lighting fixtures are specifically excluded from electrical equipment unless they are found in waste form.

No evidence of PCB-containing hydraulic or electrical equipment was observed at the Site.

7. INTERVIEWS

In accordance with ASTM E 1527-13 Chapters 10 and 11, interviews with present and past owners, operators and occupants of the Site, and government officials were conducted for the purpose of gathering information regarding the potential for RECs at the Site. The following presents a summary of the interviews that were conducted to support this Phase I ESA.

7.1 PAST AND PRESENT, OWNER(S), OPERATOR(S), AND OCCUPANT(S)

Current Owner(s), Operators, Occupants, and Key Site Manager(s)

The Site is currently owned by R & D Paving Incorporated and its primary owner Mr. Richie Dubreuil; however, his wife and business partner, Ms. Nancy Dubreuil, attended the Site reconnaissance and was interviewed in person regarding current storage or release of oil and hazardous materials at the Site. Ms. Dubreuil indicated that the current conditions were representative of Site use since their initial occupation. She was not aware of any USTs, releases of oil or hazardous materials, or floor drains at the Site. She indicated the equipment was usually washed outside and any runoff would go to the storm system along Memorial Street.

Past Owners, Operators, and Occupants

The Site was previously owned by Franklin Industrial Complex, Inc. Contact information for this prior owner was not provided to Credere by the User or current owner.

7.2 STATE AND/OR LOCAL GOVERNMENT OFFICIALS

City of Franklin Planning Department

Credere interviewed Mr. Dick Lewis regarding historical information relating to the Site. Mr. Lewis indicated he had been with the City for approximately 10 years and during his tenure with the City, the Site had been used by R & D Paving. Credere also reviewed the City's file for the Site; however, no environmentally pertinent information was present. Mr. Lewis also reported a City Assessor with more than 25-years with the City, indicated the Kar Z Karma vehicle maintenance was a small operation with one garage bay. The building is currently residential.

8. ASTM NON-SCOPE CONSIDERATIONS

The following is a discussion of findings made during this Phase I ESA as they relate to items not included within the scope of the ASTM E 1527-13 standard.

8.1 ASBESTOS

Asbestos is a heat-resistant, naturally occurring mineral that breaks into fibers. Asbestos is the generic term for six different types of minerals. Some forms of asbestos are highly toxic by inhalation of dust particles. Past uses of asbestos include, but are not limited to, pipe and boiler insulation, fire and soundproofing, brakes, gaskets, floor tiles, roofing materials, window caulk, cement products, curtains, and water pipes. While the use of asbestos has been largely reduced in building materials over the last several decades, asbestos is known to still be used in over 300 retail building products; therefore, there is always the potential for asbestos to be present in buildings. The State of New Hampshire regulates asbestos under RSA 141-E and the N.H. Code of Administrative Rules Env-A 1800 and Env-SW 2100. Under these rules, prior to undertaking any demolition or renovation that would impact any potential ACM, the owner/operator of a building shall provide for an inspection of the affected portions of the facility for the presence of asbestos by a state-licensed asbestos inspector.

A formal ACM survey was not conducted during the Phase I ESA Site reconnaissance; however, materials which may contain asbestos (e.g. floor tiles) were observed and should be assessed prior to renovation or demolition of the Site building.

8.2 LEAD BASED PAINT

Lead is toxic by ingestion and inhalation of dust or fumes. Health effects are generally correlated with blood test levels. Infants and young children absorb ingested lead more readily than older children and young adults. Primary exposure routes include LBP, lead solder, pipes in drinking water lines, and air quality in inner city settings. LBP testing is typically warranted for residential properties constructed prior to 1978, and properties where children spend a significant amount of time, such as a daycare facility. Since 1978, lead has been banned from paints used in household settings, which are typically retail available paints that are also used in commercial settings. However, in some applications, LBP is still in use to resist moisture and inhibit corrosion (e.g. in industrial metal paints).

Based on the age of the Site building, LBP may be present. A LBP screening should be conducted for the Site buildings prior to renovation or demolition to plan for proper safety precautions and management of LBP coated materials.

8.3 NON-SCOPE PCB-CONTAINING BUILDING MATERIALS

Caulk, paint, sealants, adhesives, and other materials containing PCBs were used in many buildings during building construction, renovation, or repair from the 1930s through the early 1980s. PCBs were not distributed in commerce after 1978. PCB-containing building materials may represent a risk to human health and the environment and may be regulated for disposal. In addition, while ASTM only considers PCBs in electrical or hydraulic equipment, PCBs were

commonly used in other lubricating oils, lighting ballasts, equipment, and building materials that were not related to electrical or hydraulic applications.

Based on the date of construction of the Site building, PCBs may be present in building materials. Suspect PCB-containing building materials include paint, joint compound, and caulking. Additionally, possible PCB-containing light ballasts were observed within the building. These materials should be assessed prior to renovation or demolition to ensure proper removal and disposal.

8.4 RADON

Radon is a naturally occurring radioactive gas that is released from the Maine's bedrock and soil during the radioactive decay of radium-226. Radon is the number one cause of lung cancer among non-smokers. Overall, radon is the second leading cause of lung cancer behind only smoking. Smoking significantly increases the risk of lung cancer from radon exposure, although radon can cause lung cancer in non-smokers. Radon is responsible for about 21,000 lung cancer deaths every year. About 2,900 of these deaths occur among people who have never smoked.

According to the EPA Map of Radon Zones, the Site is within Zone 2 indicating predicted average indoor radon screening levels are between 2 and 4 picocuries per liter (pCi/L), which is the EPA's recommended action levels. Radon is therefore a concern for future occupants of the Site. Buildings should be screened for radon prior to occupation. New construction, if any, should be constructed as radon-ready.

9. DATA GAPS

ASTM E 1527-13 Chapter 12.7 requires the identification of significant data gaps that may affect the environmental professional's ability to identify potential environmental conditions on the Site, the sources of information consulted to attempt to fill these data gaps, and the significance of the data gap with regard to the ability to identify potential RECs at the Site.

No data gaps that raise reasonable environmental concern were encountered during preparation of this Phase I ESA.

10. FINDINGS AND OPINIONS

Potential findings can include RECs, historical RECs (HRECs), controlled RECs (CRECs), and *de minimis* conditions (DMCs), pursuant to the ASTM E 1527-13 standard. Additionally, Credere has included other environmental findings, which are findings that do not meet the definition of the above; however, warrant an opinion by the environmental professional.

10.1 RECS

A REC is defined as the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to release to the environment, (2) under conditions indicative of a release to the environment, or (3) under conditions that pose a material threat of a future release to the environment.

REC #1 – Historical USTs at the Site and immediately upgradient of the Site

According to historical Sanborn maps, a gasoline UST was installed at the Site between 1911 and 1923 and was depicted through 1929. A second UST was also depicted immediately upgradient of the Site near the southern property boundary in 1948. These USTs were removed from the Sanborn maps; however, it is unknown if these USTs were removed from the subsurface. Registration of USTs, integrity testing, and proper removal were not regulated during the time period when these tanks were depicted.

It is Credere's opinion that it is possible these USTs are still present at and/or upgradient of the Site, and based on their age, these tanks represent a threat of release to the environment and are thus a REC.

REC #2 – Possible release of petroleum during historical use of the Site as a garage with an earthen floor

The current Site building was constructed between 1948 and 1956. The 1964 Sanborn map indicated the building was originally a private garage with an earthen floor and according to the current owner, the Site building did not have a concrete floor until soon after they purchased the Site in 1995. Garages typically use and store waste oil, gasoline, solvents, paints, and other oil or hazardous materials. Housekeeping practices prior to the 1990s were not well regulated and material handling was generally poor; therefore, due to the earthen floor any spills, leaks, and significant releases that may have occurred would have been released directly to the environment.

It is Credere's opinion these conditions are indicative of potential releases to the environment and are thus considered a REC.

REC #3 – Historical uses of the upgradient 31 to 33 Memorial Street property

According to historical sources, the upgradient 31 to 33 Memorial Street property was occupied by a laundry facility from 1897 through at least 1967 and by Kar Z Karma Motors from at least 2003 to 2008. Laundry facilities typically use bleaches, detergents, acids, and, of greatest

concern, chlorinated solvents; and motor companies typically use solvents, oils, paints, and other hazardous materials. The conditions of use, material storage, and disposal at the facility are unknown. Based on the long duration of the dry cleaner's occupation and unknowns associated with the facilities, undocumented releases may have occurred that may be migrating onto the Site and/or affecting environmental conditions in the area.

It is Credere's opinion the presence of an upgradient laundry facility and motor shop is a condition indicative of a possible release and is considered a REC.

10.2 HRECS

HRECs are defined as a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls.

No HRECs have been identified associated with the Site during this Phase I ESA.

10.3 CRECS

CRECs are defined as a REC resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority, with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls.

No CRECs have been identified associated with the Site during this Phase I ESA.

10.4 DMCS

A DMC is an environmental concern that generally does not present a threat to human health or the environment and generally would not be the subject of an enforcement action if brought to the attention of regulatory agencies. DMCs are not RECs.

DMC #1 – Onsite drum storage area within the Site building

A drum storage area is located in the garage bay south of the office portion of the Site building. At least a dozen drums were stored in this area and were labeled to contain waste oil, kettle waste and emulsion, and some drums were unlabeled. Some pooled oil was observed on top of two drums. The concrete beneath the drum storage area was observed to be stained and granular sorbent material had been applied to areas of spillage; however, the concrete foundation floor was intact and no pathway to the subsurface was identified. Additionally, the facility is identified as a RCRA Non-Gen and no violations were reported. Based on the lack of observed release to the environment and reported RCRA compliance, the drum storage area is not likely to be the subject or enforcement action if brought to the attention of the applicable regulatory authority and is thus considered a DMC.

10.5 OTHER ENVIRONMENTAL FINDINGS

The following other environmental findings do not meet the definition of a REC, HREC, CREC or *de minimis* condition as defined by the ASTM E 1527-13 standard; however, warrant the opinion of the environmental professional.

Environmental Finding #1 – Possible hazardous building materials throughout the Site

A formal Hazardous Building Material Survey (HBMS) was not conducted during this Phase I ESA; however, based on the age of the Site building, materials that may contain asbestos, lead, or PCBs were observed throughout both Site buildings. Some universal wastes (e.g. fluorescent light ballasts) are present in most buildings. Additionally, light ballasts were observed to be of age to potentially contain PCBs, which would require proper management and disposal. Because the hazardous building material are outside the ASTM E 1527-13 requirements for a Phase I ESA, the possible presence of hazardous building materials is considered an environmental finding.

Environmental Finding #2 – Current use of the Site by a paving company

The Site was most recently used by a paving company for staging of equipment, material storage, as an office, and as a garage; however, the building was reportedly planned to be vacated over the next month.

According to the *Handbook of Environmental Contaminants: A Guide for Site Assessment* (Shineldecker, 1992), petroleum hydrocarbons, solvents, tar, copper, creosote, dichloroethane, ethylenediamine, phenols, and polycyclic aromatic hydrocarbons (PAHs) are typically associated with asphalt operations. Minor staining and tar coated equipment was observed at the Site; however, no evidence of a release to the environment was observed due to the entire Site being paved with asphalt. Since conditions of the current use of the Site as a paving company do not meet the definitions of a REC, CREC, HREC, or DMC, the current use of the Site is considered an environmental finding. Any minor impacts to the Site associated with the current use will be identified by assessment conducted to confirm or dismiss the above listed RECs, and, thus, no further investigation of possible impacts associated with the current use of the Site is recommended.

11. CONCLUSIONS AND RECOMMENDATIONS

11.1 CONCLUSIONS

We have performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E 1527-13 of R & D Paving located at 81 Memorial Street in the City of Franklin, Merrimack County, New Hampshire, the property. Any exceptions to or deletions from, this practice are described in **Section 1.1** of this report

This assessment has revealed no evidence of RECs in connection with the property, except for the following:

- REC #1 – Historical USTs at the Site and immediately upgradient of the Site
- REC #2 – Possible release of petroleum during historical use of the Site as a garage with an earthen floor
- REC #3 – Historical use of the upgradient 31 to 33 Memorial Street property

Additionally, the drum storage area was identified as a DMC, and possible hazardous building materials and current use of the Site were identified as environmental findings.

11.2 RECOMMENDATIONS

Based on the RECs, DMC, and environmental findings identified during this Phase I ESA, Credere recommends the following:

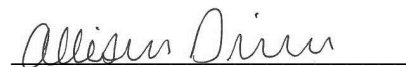

- A GPR survey to locate possible historical USTs that may be present at the Site
- A Phase II subsurface investigation to confirm or dismiss the RECs and environmental findings identified in this Phase I ESA
- A HBMS to assess the presence of hazardous building materials and/or universal wastes throughout the Site

12. SIGNATURES OF ENVIRONMENTAL PROFESSIONALS

The following individuals performed this Phase I ESA in conformance with ASTM Standard Practice E 1527-13 and AAI Standards. Any work completed on this Phase I ESA by an individual who is not considered an environmental professional was completed under the supervision or responsible charge of the environmental professionals listed after the Environmental Professionals Statement provided below.

Environmental Professionals Statement

We declare that, to the best of our professional knowledge and belief, we meet the definition of environmental professional as defined in §312.10 of 40 CFR 312. We have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. We have developed and performed the all appropriate inquiries in conformance with the standards and practices set for in 40 CFR Part 312.

Creder Associates LLC

Allison S. Drouin
Geologist

TRAINING

- ▲ 40-hour OSHA 29 CFR 1910.120 HAZWOPER Course.
- ▲ 8-hour HAZWOPER Refresher (June 2013)
- ▲ OSHA C4 HAZWOPER Supervisor Course

EDUCATION

- ▲ B.S. Geology and Environmental Studies, 2009 St. Lawrence University, Canton, NY

PROFESSIONAL ORGANIZATIONS

- ▲ Geological Society of Maine (2012)
- ▲ Active Alumni Member of Sigma Gamma Epsilon (2007)

HIGHLIGHTS OF EXPERIENCE

Ms. Allison Drouin is a Project Geologist with Creder Associates, LLC and holds a Bachelors of Science degree in Geology and Environmental Studies from St. Lawrence University (2009). She has experience in many field sampling procedures, geotechnical exploration, contractor oversight with environmental monitoring, and reporting experience including Phase I/Phase II reporting as well as regulatory compliance status and completion reporting. She has experience working on a variety of types of sites including vacant lots, commercial businesses, residential property, auto repair shops, laboratory space, farm land, industrial buildings, hydro dams, power plants and transportation infrastructure.

Environmental Site Assessments & Brownfields Programs

Ms. Drouin has completed numerous Phase I and Phase II Environmental Site Assessments for sites in Maine, Massachusetts, New Hampshire, Maryland, New York, and Texas. Ms. Drouin's responsibilities include all aspects of an ASTM compliant Phase I ESA including site inspection, records review, interview and report preparation; preparation of conceptual site model, data gap analyses and sampling plans; planning, organizing and implementing field tasks including soil borings, well installation, low flow groundwater sampling, sub-slab soil gas sampling, indoor air sampling, hazardous building material sampling, and test pitting; preparation of Phase II Site Assessment reports and other compliance reporting; and remedial and construction oversight. Ms. Drouin's experience has focused primarily on petroleum and urban fill investigations, and many projects have involved the assessment and remediation PCBs and metals contaminated media.

Ms. Drouin has performed some of the above environmental assessments under USEPA funded Brownfields program. She has performed Phase I and Phase II Environmental Site Assessment and cleanup activities and prepared Analysis of Brownfields Cleanup Alternatives (ABCAs), Quality Assurance Project Plans detailing all investigation, sampling, and analytical testing activities and health and safety plans. Ms. Drouin has worked on Brownfields programs with the Brewer Redevelopment, LLC, Brewer, Maine; DevelopSpringfield, Springfield, Massachusetts; City of Sanford, Maine; Berkshire Regional Planning Commission, Massachusetts; Merrimack Valley Planning Commission, Massachusetts; and the Pioneer Valley Planning Commission, Massachusetts.

Remediation Projects

Ms. Drouin has participated in planning and overseen the implementation of several remediation projects including New Bedford High School, New Bedford, Massachusetts; Bangor Hydro Generator Station, Bar Harbor, Maine; Bangor Hydro Pole Yard, Machias, Maine; Pine Street Canal, Burlington, Vermont; Hoffman-La Roche, Nutley, New Jersey and Brookline Place in Brookline, Massachusetts. Remediation techniques include soil excavation and offsite disposal; insitu treatment with hydrogen peroxide; onsite stabilization of lead soils for offsite disposal; and pump and treat of LNAPL impacted groundwater.

APPENDIX B

Credere Associates Standard Scope of Work

Credeire's Scope of Work for Phase I Environmental Site Assessments

The following is Credeire's scope of work for completion of this Phase I ESA conducted in accordance with the ASTM Standard Practice for Environmental Site Assessments (ESA): Phase I ESA Process (ASTM E 1527-13). The ASTM Standard Practice for ESAs: Phase I ESA Process (ASTM E 1527-13) meets the requirements of the Environmental Protection Agency (EPA) Standards and Practices for All Appropriate Inquiries (AAI); Final Rule (40 CFR Part 312).

The objective of conducting a Phase I ESA is to provide a concise liability assessment in order that informed environmental business decisions may be made regarding the subject property. To accomplish this goal, our reports contain a summary that focuses on potential liabilities and presents conclusions and recommendations for confirming or dismissing the concerns and Recognized Environmental Conditions (RECs) identified during the Phase I ESA.

Our Phase I ESA process consists of the following four tasks: (1) records review, (2) site reconnaissance, (3) interviews, and (4) report. Each of these tasks is described in detail below.

Records Review

The purpose of the records review was to obtain and review reasonably ascertainable¹ records that help identify recognized environmental conditions in connection with the property. The following state and federal environmental record sources, with the minimum search distances used for each, are reviewed from USEPA websites, state online databases, and an environmental records report for the property from EDR:

Source	Minimum Search Distance (mi)
Federal NPL Site List	1.0
Federal CERCLIS List	0.5
Federal RCRA TSD Facilities List	1.0
Federal RCRA Generators List	Property and Adjoining Properties
Federal ERNS List	Property Only
State Leaking UST Sites	0.5
State Registered UST Sites	Property and Adjoining Properties

These records are reviewed for database listings associated with activities identified on the target property, or nearby sites that may have the potential to impact the target

¹ Information that is 1) publicly available, 2) obtainable from its source within reasonable time and cost constraints, and 3) practically reviewable (ASTM E 1527-013).

property. Additional state and local records sources are reviewed to enhance or supplement the federal and state sources identified above. These include:

- Lists of Landfill/Solid Waste Disposal Sites
- Records of Emergency Release Reports
- USGS 7.5 Minute Topographic Map
- Department of Natural Resources Publications
- State Geologic Surveys and Reports
- Fire Department
- County Health Department

Historical records for the subject property and surrounding area are reviewed to determine the previous uses or occupancies of the property and surrounding area to identify those uses or occupancies that are likely to have led to recognized environmental conditions in connection with the property. The following historical records are reviewed:

- Ownership/Lease-Right History
- Aerial Photographs
- Historical USGS Topographic Maps
- Historical City Directories
- Historical Fire Insurance Maps
- Historical Property Tax Assessor, Code Enforcement, and Zoning/Land Use Records
- Previous Environmental Investigations

Historical information contained in any previous environmental site assessments is reviewed, incorporated, and referenced as appropriate.

Site Reconnaissance

The site reconnaissance is performed to obtain information indicating the likelihood of identifying recognized environmental conditions in connection with the target property. The site reconnaissance includes visual and physical observations noted while observing the periphery of the property, the periphery of all structures on the property, all interior spaces of the structure, including maintenance and repair areas, common areas, storage areas, and boiler rooms. Crede notes the presence or absence of the following:

- Storage tanks
- Odors
- Pools of liquid
- Drums
- Identified and/or unidentified substance containers
- Likely PCB-containing transformers or window caulk
- Heating/cooling sources
- Interior stains or corrosion
- Drains and sumps
- Pits, ponds, lagoons
- Stained soil or pavement

- Stressed vegetation
- Solid waste
- Wastewater
- Wells
- Septic systems

Any visual or physical indications of past uses of the property that are likely to involve the use, treatment, storage, disposal, or generation of hazardous substances or petroleum products are noted. Current and/or past uses of adjoining properties and/or the surrounding area to the extent visually or physically observed which are likely to indicate RECs in connection with the adjoining property or property are also noted.

Interviews

Interviews with current and former owners and occupants are conducted to obtain information indicating RECs in connection with the property. The content of questions to be asked shall attempt to obtain information about uses and conditions of items noted during the site reconnaissance and to obtain any environmentally pertinent documents or any threatened, pending, or past: litigation, administrative actions, or notices of violation relevant to hazardous substances or petroleum products in, on, or from the property. Reasonable attempts will be made to interview the property owner, occupant, and/or key site manager.

Interviews with local government officials are conducted to obtain information indicating RECs in connection with the subject property. Reasonable attempts are made to interview a staff member of the following types of local government agencies: fire department, tax assessor, code enforcement officer, health agencies, and/or local/regional office of state agency having jurisdiction over hazardous waste disposal or other environmental matters in the area in which the property is located.

Report

Our report for the Phase I ESA will generally follow the recommended report format presented in ASTM E 1527-13. The report will include documentation to support the analysis, opinions, and conclusions presented in the report, as well as the credentials of the environmental professional(s) responsible for the Phase I ESA. The report will include the environmental professional's opinion of the impact of recognized environmental conditions in connection with the property. If the assessment reveals no evidence of RECs, then a statement to this effect will be made in the report.

Non-ASTM-Scope Considerations

The following is a list of items considered non-scope according to ASTM E 1527-13 Appendix X5.

- Asbestos containing materials
- Radon
- Lead Based Paint
- Lead in drinking water
- Wetlands
- Regulatory compliance
- Endangered species
- Indoor air quality (unrelated to a release to the environment)
- Mold

Considerations may be given to these items on a Site-specific basis or at the client's request. Case by case inclusion of these items is considered to add value to Phase I ESAs conducted for certain uses (i.e. the Brownfields program, redevelopment projects, etc.).

APPENDIX C

Interview Documentation

PHASE I ENVIRONMENTAL SITE ASSESSMENT
USER QUESTIONNAIRE

R & D Paving Memorial Street

SITE NAME

In order to qualify for one of the Landowner Liability Protections (LLPs) offered by the Small Business Liability Relief and Brownfields Revitalization Act of 2002 (the "Brownfields Amendment") the user must provide the following information (if available) to the environmental professional. Failure to provide this information could result in a determination that "all appropriate inquiry" is not complete.

(1) Please describe the purpose for performing this Phase I Environmental Site Assessment (ESA):

The City of Franklin has an option for this property and completing a Phase 1 Assessment will provide important information regarding any possible hurdles to closing on the property.

(2) Please identify whether this Phase I ESA is being performed to secure financing for the purchase or redevelopment of the property, to perform environmental due diligence to obtain CERCLA liability protections, or both:

The Phase 1 ESA is being performed to ensure environmental due diligence as part of a anticipated acquisition of the property by the City, and to obtain the appropriate liability protections.

(3) Please describe the planned future use of the property:

The City is exploring several options for the re-use of this property. in the short term, it may be rented for some simple storage, or used by the City for seasonal storage of equipment or materials. In the long term, the site is being reviewed for uses that will contribute to the overall re-development of the mill district area. Additional parking could be constructed; the site could be used for a regional bus transport network; or, it could be home to a bike or car

(4) Please indicate if any of the following inquiries have been performed on the property. If so, it is your responsibility under the ASTM practice to provide Credere with these documents or identify where these documents can be obtained:

a. Chain of title:

YES: NO:

b. Judicial record/UCC search for liens:

YES: NO: Date of Search if Yes: _____

c. A plan or other map showing the property boundary and/or buildings:

YES: NO:

d. Prior Phase I ESA or other environmental report for the subject property:

YES: NO: UNKNOWN:

(5) **Are any environmental cleanup liens filed or recorded against deed for the subject property (40 CFR 312.25)?** (i.e. Are you aware of any environmental cleanup liens against the property that are filed or recorded under federal, tribal, state or local law?)
YES: NO: **If YES, please describe the type of lien below:**

(6) **Are activity and land use limitations (called AUL's) in-place on the site or that have been filed or recorded in a registry (40 CFR 312.26)?** (i.e. Are you aware of any AULs, such as engineering controls, land use restrictions or institutional controls that are in place at the site and/or have been filed or recorded in a registry under federal, tribal, state or local law?)
YES: NO: **If YES, please describe the AULs below:**

(7) **Do you have 'Specialized Knowledge' or experience of the person seeking to qualify for the LLPu (40 CFR 312.28)?** For example, are you involved in the same line of business as the current or former occupants of the property or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business?
YES: NO: **If YES, please describe any specialized knowledge below:**

Since the City is proposing to purchase this property, this is not really an applicable question.

(8) **What is the relationship of the offered purchase price to fair market value? See Questions below:**

a. Does the purchase price being paid for this property reasonably reflect the fair market value of the property?
YES: NO:

b. If you conclude that there is a difference, have you considered whether the lower purchase price is because contamination is known or believed to be present at the property?
YES: NO:

(9) **Are you aware of commonly known or reasonably ascertainable information about the property that would help the environmental professional to identify conditions indicative of releases or threatened releases?** *For example, as user,*

a. Do you know the past uses of the property?
YES: NO: **If YES, please describe below:**

The property was used by R & D Paving for an office, material storage area, and a small garage. Prior to that, it was used, to our best belief and understanding, as an auto related garage use.

b. Do you know of specific chemicals that are present or once were present at the property?

YES: NO: If YES, please identify the chemicals and uses below:

Other than the materials that are currently present in the storage and garage area, the City does not have any specific knowledge of chemical uses on the property.

c. Do you know of spills or other chemical releases that have taken place at the property?

YES: NO: If YES, please describe below:

d. Do you know of any environmental cleanups that have taken place at the property?

YES: NO: If YES, please describe below:

(10) As the user of this ESA, based on your knowledge and experience related to the property are there any obvious Indicators that point to the presence or likely presence of contamination at the property?

YES: NO: If YES, please describe below:

(11) Property access and key individuals.

a. Are there any areas of the property that cannot be safely accessed or are restricted that Credere cannot enter?

YES: NO: If yes, please identify these areas below:

b. Are there any confidentiality agreements or privacy concerns Credere should be aware of during this Phase I ESA? For example, are building workers or occupants aware of the reason for this Phase I ESA (i.e. property sale) or are there any restrictions on whom Credere can speak with during our reconnaissance?

YES: NO: If yes, please explain below:

- c. Please provide the name and contact information for the individual Credere should contact to access the property:

Name: Richard Lewis, Planning Director
Phone: 603-934-2341
Email: dlewis@franklinnh.org

- d. If different from the above individual and known, please provide the name and contact information for the 'key site manager' (e.g. the building superintendent, plant manager, environmental coordinator, etc.):

Name: _____
Phone: _____
Email: _____

- e. If known, please provide the name and contact information for any prior property owners or occupants:

Name: Richie Dubreuil
Phone: 934-6745
Email: _____

- f. Are there any other individuals at your organization who have knowledge of the property that Credere should interview in support of this ESA?

YES: **NO:** If YES, please provide contact information below:

Name: George Turcotte, Assistant MSD Director
Phone: 934-4103
Email: gturcotte@franklinnh.org

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal CERCLIS NFRAP site List

CERC-NFRAP: Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

A review of the CERC-NFRAP list, as provided by EDR, and dated 10/25/2013 has revealed that there is

EXECUTIVE SUMMARY

1 CERC-NFRAP site within approximately 0.5 miles of the target property.

J. P. STEVENS TEXTILE	EAST BOW STREET	E 1/8 - 1/4 (0.232 mi.)	N52	94

Federal RCRA generators list

RCRA-CESQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-CESQG list, as provided by EDR, and dated 03/11/2014 has revealed that there are 3 RCRA-CESQG sites within approximately 0.25 miles of the target property.

State- and tribal - equivalent CERCLIS

NH SHWS: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Environmental Services' Hazardous Waste Inventory list.

A review of the NH SHWS list, as provided by EDR, and dated 05/05/2014 has revealed that there are 5 NH SHWS sites within approximately 1 mile of the target property.

Local Lists of Hazardous waste / Contaminated Sites

NH ALLSITES: Provides information on sites in New Hampshire, with activities that either have resulted in groundwater contamination or pose a potential hazard to groundwater supplies. The regulated activities and groundwater hazards include: confirmed releases of oil or hazardous materials to the soil and/or groundwater as a result of discharges, spills, and removal of underground storage tanks; underground injection wells such as floor drains, leaching galleries, and septic systems anything other than domestic wastewater; large discharges of wastewater such as domestic wastewater septic systems which are designed to discharge more than 20,000 gpd, land application of wastewater treatment facility effluent (spray irrigation, rapid infiltration rapid infiltration basins, etc.) and unlined septage and wastewater lagoons; unpermitted hazardous waste storage facilities; landfills and other waste repositories in which groundwater quality is at risk.

A review of the NH ALLSITES list, as provided by EDR, and dated 05/05/2014 has revealed that there are 14 NH ALLSITES sites within approximately 0.5 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 03/11/2014 has revealed that there are 24 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the EDR MGP list, as provided by EDR, has revealed that there is 1 EDR MGP site within approximately 1 mile of the target property.

<u>Lower Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>
FRANKLIN GAS WORKS	59 W BOW STREET	WSW 1/8 - 1/4 (0.211 mi.)	M45	82

EDR US Hist Auto Stat: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR US Hist Auto Stat list, as provided by EDR, has revealed that there are 2 EDR US Hist Auto Stat sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

<u>Lower Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>

Hazardous Waste Summary:

Waste code: D001
 Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Hazardous Waste Summary:

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Hazardous Waste Summary:

Waste code: D001

Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Hazardous Waste Summary:

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D018
Waste name: BENZENE

Violation Status: No violations found

Hazardous Waste Summary:

Waste code: D001

Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Recipient name: Grant type: Property name: Property #: Parcel size: Property Description:	Lakes Region Planning Commission Assessment POLYCLAD LAMINATES, INC. Map 116, Lot 171 1.97 The Site is composed of a single vacant 1.97-acre parcel of land located at 45 Tannery Street in Franklin, New Hampshire, that is situated along the Pemigewasset River. The Site consists of a vacant lot with only the former buildings concrete slab-on-grade foundation and a small pile of debris. The Site was first developed in 1892. By approximately 1930, the first building was constructed on the Site. The most recent building was demolished in 2008 after it collapsed due to heavy winter snow cover. Based on a prior Phase I ESA report, the Site appears to be have used for railroad purposes when the Boston & Maine and Bristol Rail Road transected the Site beginning in 1892. It is not clear when railroad activities ceased on the Site. However, records do show that the Hingston Leather Company, Inc. and Louis Verza Leather Company were using the Site for tannery activities beginning in the 1950s until the mid to late 1970s. Between 1979 and 1980, Polyclad Laminates, Inc. began operations on the Site. Polyclad Laminates, Inc. manufactured component materials used in multi-ed circuit boards called pre-preg. The process involved dipping fiberglass cloth in a dip tank filled with epoxy resin. Polyclad Laminates used the Site for the manufacture of pre-preg from between 1979 and 1980 until around 2006.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 10/25/2013	Source: EPA
Date Data Arrived at EDR: 11/11/2013	Telephone: N/A
Date Made Active in Reports: 01/28/2014	Last EDR Contact: 07/08/2014
Number of Days to Update: 78	Next Scheduled EDR Contact: 10/20/2014
	Data Release Frequency: Quarterly

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 10/25/2013	Source: EPA
Date Data Arrived at EDR: 11/11/2013	Telephone: N/A
Date Made Active in Reports: 01/28/2014	Last EDR Contact: 07/08/2014
Number of Days to Update: 78	Next Scheduled EDR Contact: 10/20/2014
	Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/1991	Source: EPA
Date Data Arrived at EDR: 02/02/1994	Telephone: 202-564-4267
Date Made Active in Reports: 03/30/1994	Last EDR Contact: 08/15/2011
Number of Days to Update: 56	Next Scheduled EDR Contact: 11/28/2011
	Data Release Frequency: No Update Planned

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Federal Delisted NPL site list

DELISTED NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 10/25/2013	Source: EPA
Date Data Arrived at EDR: 11/11/2013	Telephone: N/A
Date Made Active in Reports: 01/28/2014	Last EDR Contact: 07/08/2014
Number of Days to Update: 78	Next Scheduled EDR Contact: 10/20/2014
	Data Release Frequency: Quarterly

Federal CERCLIS list

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 10/25/2013	Source: EPA
Date Data Arrived at EDR: 11/11/2013	Telephone: 703-412-9810
Date Made Active in Reports: 02/13/2014	Last EDR Contact: 05/29/2014
Number of Days to Update: 94	Next Scheduled EDR Contact: 09/08/2014
	Data Release Frequency: Quarterly

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 05/31/2013	Source: Environmental Protection Agency
Date Data Arrived at EDR: 07/08/2013	Telephone: 703-603-8704
Date Made Active in Reports: 12/06/2013	Last EDR Contact: 07/08/2014
Number of Days to Update: 151	Next Scheduled EDR Contact: 10/20/2014
	Data Release Frequency: Varies

Federal CERCLIS NFRAP site List

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Date of Government Version: 10/25/2013	Source: EPA
Date Data Arrived at EDR: 11/11/2013	Telephone: 703-412-9810

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

Date of Government Version: 03/11/2014
Date Data Arrived at EDR: 03/13/2014
Date Made Active in Reports: 04/09/2014
Number of Days to Update: 27

RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

Date of Government Version: 03/11/2014

RCRA-CESQG: RCRA - Conditionally Exempt Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Federal institutional controls / engineering controls registries

US ENG CONTROLS: Engineering Controls Sites List

A listing of sites with engineering controls in place. Engineering controls include various forms of caps, building foundations, liners, and treatment methods to create pathway elimination for regulated substances to enter environmental media or effect human health.

Date of Government Version: 12/17/2013	Source: Environmental Protection Agency
Date Data Arrived at EDR: 01/14/2014	Telephone: 703-603-0695
Date Made Active in Reports: 01/28/2014	Last EDR Contact: 06/05/2014
Number of Days to Update: 14	Next Scheduled EDR Contact: 09/22/2014
	Data Release Frequency: Varies

US INST CONTROL: Sites with Institutional Controls

A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

Date of Government Version: 12/17/2013	Source: Environmental Protection Agency
Date Data Arrived at EDR: 01/14/2014	Telephone: 703-603-0695
Date Made Active in Reports: 01/28/2014	Last EDR Contact: 06/05/2014
Number of Days to Update: 14	Next Scheduled EDR Contact: 09/22/2014
	Data Release Frequency: Varies

LUCIS: Land Use Control Information System

LUCIS contains records of land use control information pertaining to the former Navy Base Realignment and Closure properties.

Date of Government Version: 05/28/2014	Source: Department of the Navy
Date Data Arrived at EDR: 05/30/2014	Telephone: 843-820-7326
Date Made Active in Reports: 06/17/2014	Last EDR Contact: 05/19/2014

Federal ERNS list

ERNS: Emergency Response Notification System

Emergency Response Notification System. ERNS records and stores information on reported releases of oil and hazardous substances.

Date of Government Version: 09/30/2013	Source: National Response Center, United States Coast Guard
Date Data Arrived at EDR: 10/01/2013	Telephone: 202-267-2180
Date Made Active in Reports: 12/06/2013	Last EDR Contact: 07/03/2014
Number of Days to Update: 66	Next Scheduled EDR Contact: 07/14/2014
	Data Release Frequency: Annually

State- and tribal - equivalent CERCLIS

SHWS: Listing of All Sites

State Hazardous Waste Sites. State hazardous waste site records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. Available information varies by state.

Date of Government Version: 05/05/2014	Source: Department of Environmental Services
Date Data Arrived at EDR: 05/05/2014	Telephone: 603-271-2919
Date Made Active in Reports: 05/27/2014	Last EDR Contact: 05/05/2014

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

Local Lists of Hazardous waste / Contaminated Sites

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

CDL: Clandestine Drug Lab Listing

A listing of clandestine drug lab site locations included in the Site Remediation and Groundwater Hazard Inventory.

Date of Government Version: 05/05/2014	Source: Department of Environmental Services
Date Data Arrived at EDR: 05/05/2014	Telephone: 603-271-0650
Date Made Active in Reports: 05/27/2014	Last EDR Contact: 05/05/2014
Number of Days to Update: 22	Next Scheduled EDR Contact: 08/25/2014
	Data Release Frequency: Every 4 Years

US HIST CDL: National Clandestine Laboratory Register

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

	Data Release Frequency: Quarterly

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR US Hist Auto Stat: EDR Exclusive Historic Gas Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Date of Government Version: 07/30/2013	Source: Department of Energy & Environmental Protection
Date Data Arrived at EDR: 08/19/2013	Telephone: 860-424-3375

Oil/Gas Pipelines: This data was obtained by EDR from the USGS in 1994. It is referred to by USGS as GeoData Digital Line Graphs from 1:100,000-Scale Maps. It was extracted from the transportation category including some oil, but primarily gas pipelines.

Electric Power Transmission Line Data

Source: Rextag Strategies Corp.
Telephone: (281) 769-2247

U.S. Electric Transmission and Power Plants Systems Digital GIS Data

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Source: American Hospital Association, Inc.
Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000

A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes

Source: National Institutes of Health
Telephone: 301-594-6248

Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools

Source: National Center for Education Statistics
Telephone: 202-502-7300

The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools

Source: National Center for Education Statistics
Telephone: 202-502-7300

The National Center for Education Statistics' primary database on private school locations in the United States.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Daycare Centers: Child Care Facility List
Source: Department of Health & Human Services
Telephone: 603-271-4624

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2011 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetlands Inventory
Source: University of New Hampshire
Telephone: 603-862-1792

Scanned Digital USGS 7.5' Topographic Map (DRG)
Source: United States Geologic Survey

A digital raster graphic (DRG) is a scanned image of a U.S. Geological Survey topographic map. The map images are made by scanning published paper maps on high-resolution scanners. The raster image is georeferenced and fit to the Universal Transverse Mercator (UTM) projection.

GEOCHECK[®] - PHYSICAL SETTING SOURCE ADDENDUM

TARGET PROPERTY ADDRESS

FRANKLIN MILL DISTRICT
MEMORIAL ST
FRANKLIN, NH 03235

TARGET PROPERTY COORDINATES

Latitude (North):	43.4459 - 43° 26' 45.24"
Longitude (West):	71.6478 - 71° 38' 52.08"
Universal Tranverse Mercator:	Zone 19
UTM X (Meters):	285739.0
UTM Y (Meters):	4813523.5
Elevation:	300 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map:	43071-D6 FRANKLIN, NH
Most Recent Revision:	2000

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principal investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General SSW

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Target Property County
MERRIMACK, NH

FEMA Flood
Electronic Data
YES - refer to the Overview Map and Detail Map

Flood Plain Panel at Target Property: 33013C - FEMA DFIRM Flood data

Additional Panels in search area: Not Reported

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property
FRANKLIN

NWI Electronic
Data Coverage
YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

<u>MAP ID</u>	<u>LOCATION FROM TP</u>	<u>GENERAL DIRECTION GROUNDWATER FLOW</u>
Not Reported		

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era: Paleozoic
System: Devonian
Series: Devonian
Code: De (decoded above as Era, System & Series)

GEOLOGIC AGE IDENTIFICATION

Category: Eugeosynclinal Deposits

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: PAXTON

Soil Surface Texture: very stony - fine sandy loam

Hydrologic Group: Class C - Slow infiltration rates. Soils with layers impeding downward movement of water, or soils with moderately fine or fine textures.

Soil Drainage Class: Well drained. Soils have intermediate water holding capacity. Depth to water table is more than 6 feet.

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: LOW

Depth to Bedrock Min: > 60 inches

Depth to Bedrock Max: > 60 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Permeability Rate (in/hr)	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	2 inches	very stony - fine sandy loam	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 2.00 Min: 0.60	Max: 6.00 Min: 4.50
2	2 inches	26 inches	fine sandy loam	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 2.00 Min: 0.60	Max: 6.00 Min: 4.50
3	26 inches	65 inches	fine sandy loam	Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 0.20 Min: 0.00	Max: 6.00 Min: 4.50

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: fine sandy loam
unweathered bedrock

Surficial Soil Types: fine sandy loam
unweathered bedrock

Shallow Soil Types: No Other Soil Types

Deeper Soil Types: unweathered bedrock
gravelly - loamy sand
sandy loam
loamy sand

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Scanned Digital USGS 7.5' Topographic Map (DRG)

Source: United States Geologic Survey

A digital raster graphic (DRG) is a scanned image of a U.S. Geological Survey topographic map. The map images are made by scanning published paper maps on high-resolution scanners. The raster image is georeferenced and fit to the Universal Transverse Mercator (UTM) projection.

HYDROLOGIC INFORMATION

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2011 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetlands Inventory

Source: University of New Hampshire

Telephone: 603-862-1792

HYDROGEOLOGIC INFORMATION

AQUIFLOW^R Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Services

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Services (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Services, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

EDR Aerial Photo Decade Package

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

When delivered electronically by EDR, the aerial photo images included with this report are for ONE TIME USE ONLY. Further reproduction of these aerial photo images is prohibited without permission from EDR. For more information contact your EDR Account Executive.

Thank you for your business.
Please contact EDR at 1-800-352-0050
with any questions or comments.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Report is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Report includes a search of available city directory data at 5 year intervals.

RESEARCH SUMMARY

The following research sources were consulted in the preparation of this report. A check mark indicates where information was identified in the source and provided in this report.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Credere Associates were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.
