New Hampton New Hampshire Co-occurrence Areas

Legend

	Municipal Boundaries		Surface Water
	Half-mile Extended Study Area		Streams
Roads			
	Interstate Highway	Cooccurrence Values	
	Primary State Highways		Low
	Secondary State Highways		Medium
	Local Roads		High
	Class VI Roads and Trails		

DATA SOURCES:

Roads from the NH Department of Transportation, 2005, distributed by Complex Research Systems Center (CSRC), University of New Hampshire. Other Base map features from standard 7.5-minute USGS quadrangles, 1:24,000 scale, mapped and distributed by CSRC.

Wetlands were derived from U.S. Fish & Wildlife Service, 1:24,000 scale National Wetlands Inventory maps, Natural Resources Conservation Service (NRCS) hydric soils (see soil disclaimer below), and 1998 aerial photography. All primary sources were distributed by CSRC. A windshield survey field verified less than 15% of final mapping; boundaries were estimated to within 50ft (20m). Accurate delineation requires further field review.

The co-occurrence areas were determined by overlaying twelve different natural resource factors as indicated in previous maps. Those areas that have four or more resources overlapping are considered to have the highest value.

Digital data in NH GRANIT represent the efforts of the contributing agencies to record information from the cited source materials. Complex Systems Research Center (CSRC), under contract to the Office of Energy and Planning (OEP), and in consultation with cooperating agencies, maintains a continuing program to identify and correct errors in these data. OEP, CSRC, and the cooperating agencies make no claim as to the validity or reliability or to any implied uses of these data.

Ecosystem Management Consultants (EMC) and Plymouth State University (PSU) recognize the inherent limitations to precise positioning of GIS data as supplied by CSRS or any other public agency. They also recognize the limitations of satellite (Landsat) and other remotely-derived data in terms of on-the-ground precision. Any information contained within the written, tabular, or spatial aspects of this NRI is not intended to replace credible survey benchmark data that can be used to uphold legal standing. Like CSRS, EMC and PSU are not responsible for, nor take any liability for any misrepresentation, legal or otherwise, that may arise from the inaccuracy of this data.
